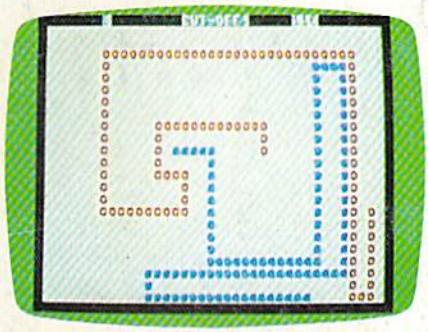
For Owners And Users Of **Commodore VIC-20**™ And **64**™ Personal Computers

CUT-OFF!

A fast-action two-player game written in machine language. For the VIC and 64.



The Data Base As A Home Information Center

A look at this powerful new software for personal computers.

Educational Games For The 64

Sea Route To India: A Historical Simulation.

A colorful and exciting recreation of the fifteenth-century Portuguese voyages to India.

Guess America.

Travel across the country in a covered wagon by answering questions about U.S. history, geography, and current events. A valuable learning tool.

Also In This Issue

A Guide To Commodore User Groups—Part 1

Computing For Families

Machine Language For Beginners

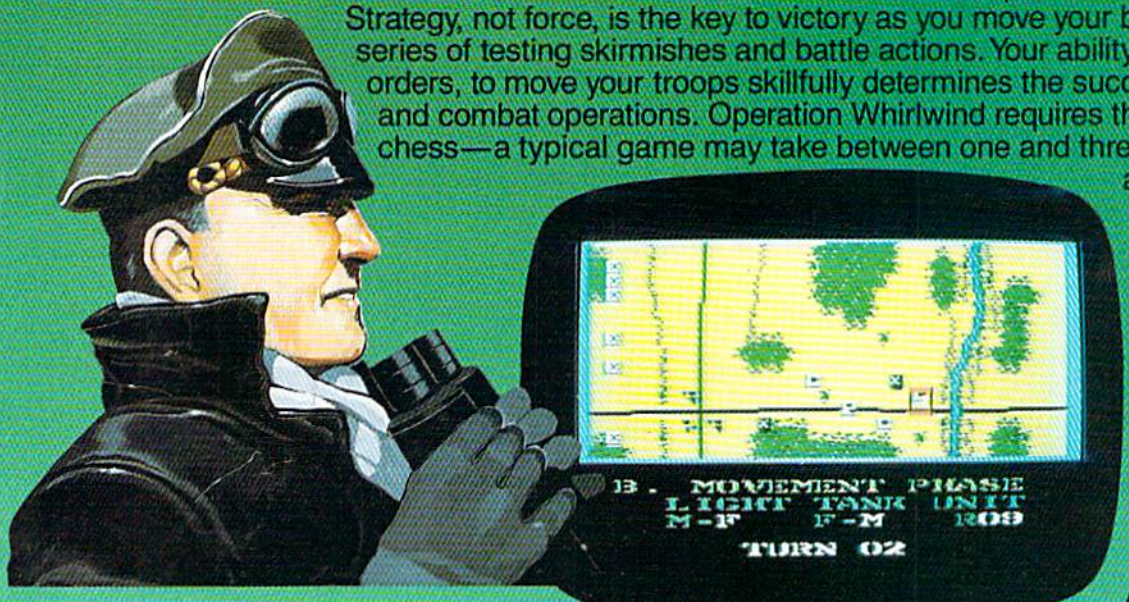
MAKING MORE READABLE LISTINGS

BASIC editing techniques for unique listing formats. For the VIC and 64.

The Challenge:
Match Wits with the Mind Games from Broderbund!

OPERATION WHIRLWIND™

Your mind is the ultimate weapon in this unique war game. Strategy, not force, is the key to victory as you move your battalion through a series of testing skirmishes and battle actions. Your ability to command, to give orders, to move your troops skillfully determines the success of your assault and combat operations. Operation Whirlwind requires the concentration of chess—a typical game may take between one and three hours—and the ability to master the many tactics of waging a full scale war. How well you can focus your strategic energies will decide whether your victory is Questionable, Marginal, Tactical, Strategic or a Breakthrough. A great game for the thinking game player. Available on disk.



MATCHBOXES™

Pit your concentration against another player or the computer. Here's a puzzle game that will keep the whole family bemused, befuddled and playing happily for hours. A grid of 36 numbered boxes conceals an animated menagerie of colorful characters, creatures and objects. The object of the game is to match identical squares and then solve a hidden word puzzle. There are many game variations with puzzles that are frontward, backward, or scrambled. Matchboxes. It's the most memorable memory game you've ever played! Available on disk and cassette.*

OPERATION WHIRLWIND AND MATCHBOXES ARE AVAILABLE FOR THE COMMODORE 64 AND ATARI HOME COMPUTERS. COMMODORE 64 and ATARI are trademarks of Atari, Inc., and Commodore Electronics, Ltd., respectively.

*Cassette on Atari computers only.

Broderbund Software

Discover the Difference

17 Paul Drive San Rafael, CA 94903

These are the hands of a master typist. (Jonathan Pandolfi, age 7.)

MasterType™—the best-selling program that turns learning into child's play.

Given the choice of learning a skill or playing a game, most kids go for the game.

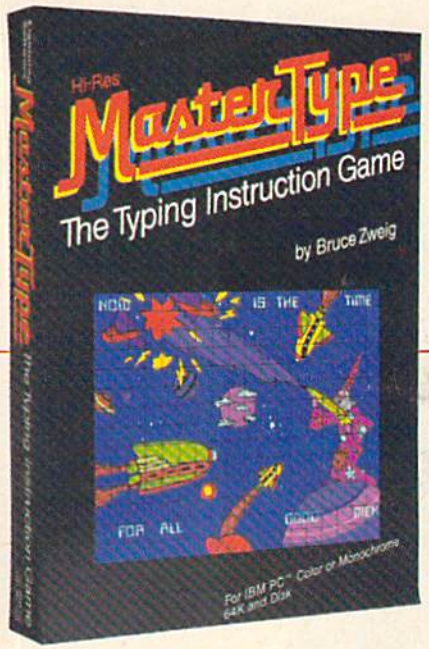
So how has MasterType™ gotten so many young kids to sit still long enough to learn to type?

By being fun. By bringing the fast action of video games to each of MasterType's lesson program segments.

Kids get so caught up in zapping spaceships, they hardly realize they've mastered the keyboard.

Warning: Parents like it, too. And may find themselves unwittingly becoming expert typists before they know it.

Disks: Apple®, Atari®, Commodore 64® $39.95
IBM-PC $49.95
Cartridges: Atari®, Commodore 64® $39.95



Try the other programs in the Scarborough System—Songwriter™, PictureWriter™, Phi Beta Filer™, PatternMaker™ and Run for the Money™. All Scarborough software utilizes your computer's capabilities to the fullest. And perhaps more importantly, all are easy to use.

Apple, IBM and Atari are registered trademarks of Apple Computer, Inc., International Business Machines Corp. and Atari, Inc. respectively. Commodore 64 is a trademark of Commodore Electronics Limited.

The Scarborough System.

You'll grow with us.

IF YOU'RE LIKE MOST BUY A SINGLE

YOU'LL BUY LOTS OF SPINNAKER GAMES.

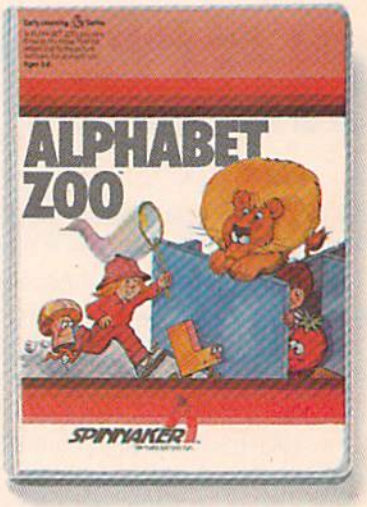
And not just because they're educational, but also because they happen to be a lot of fun to play.

In fact, they're so much fun, parents have been known to sneak in a few hours of play when the kids are asleep.

After all, if your kids are actually enjoying a learning game, there must be something to it. And there is: Fun, excitement and real educational value. That's what sets Spinnaker games apart from all the rest. And what brings parents back for more.

We offer a wide range of learning games for a wide range of age groups: 3 to 14. One look at these two pages will show you how we carefully designed our line of learning games to grow right along with your child.

So if you're looking for a line of learning games that are as much fun to play as they are to buy, consider Spinnaker Games. They're compatible with **Apple, Atari, IBM PC, PCjr, Commodore 64, Coleco Adam** and parents who don't mind their kids having fun while they learn.



A trip through ALPHABET ZOO.™ Ages 3 to 8.

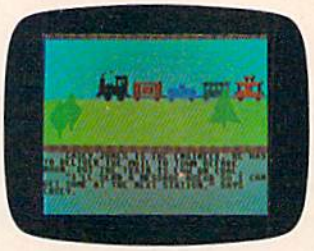
It's a race. It's a chase. It's Alphabet Zoo, a game that sends your kids zipping through the maze, after letters that fit the picture on the screen.

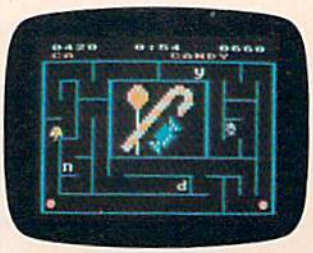
Your kids will have fun learning the relationship of letters and sounds, and sharpening their spelling skills. They'll be laughing at every turn.

It's new! KIDWRITER™ lets kids make their own storybook. Ages 6 to 10.

KIDWRITER gives children a unique new format for creating their own stories. With KIDWRITER, kids make colorful scenes, then add their own story lines. It's as versatile and exciting as your child's imagination!

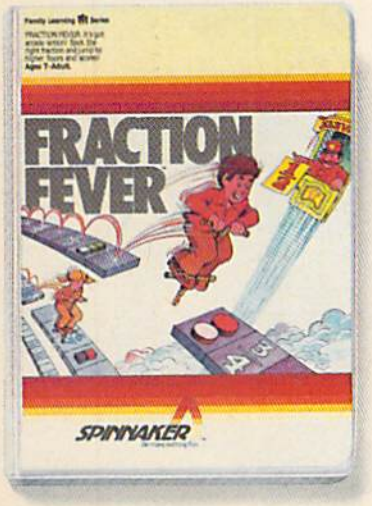
Best of all, while it encourages children to create word and picture stories, it also introduces them to the fundamentals of word processing. KIDWRITER will bring out the storyteller in your children—and in you!





Apple and Atari are registered trademarks of Apple Computer, Inc. and Atari, Inc. respectively. IBM PC and PCjr, Commodore 64 and Coleco Adam are trademarks of International Business Machines Corp., Commodore Electronics Ltd. and Coleco Industries respectively. © 1984, Spinnaker Software Corp. All rights reserved.

PARENTS, YOU WON'T SPINNAKER GAME.



FRACTION FEVER™ brings fractions into play.
Ages 7 to Adult.

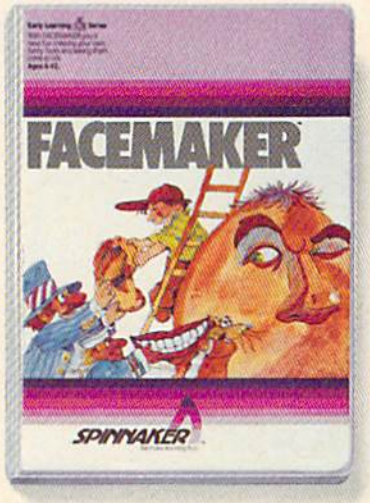
FRACTION FEVER is a fast-paced arcade game that challenges a child's understanding of fractions. As kids race across the screen in search of the assigned fraction, they're actually learning what a fraction is and about relationships between fractions.

All in all, FRACTION FEVER encourages kids to learn as much as they can about fractions—just for the fun of it!

DELTA DRAWING.™ Have fun creating pictures and computer programs.
Ages 4 to Adult.

Kids love to draw. And DELTA DRAWING Learning Program lets them enjoy creative drawing and coloring while they learn computer programming concepts.

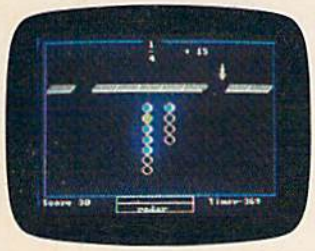
With DELTA DRAWING, even kids who have never used a computer before can learn to write programs and build an understanding of procedural thinking. It's easy, clear, and lots of fun!



FACEMAKER™ makes faces fun.
Ages 3 to 8.

FACEMAKER lets children create their own funny faces on the screen, then make them do all kinds of neat things: wink, smile, wiggle their ears, and more.

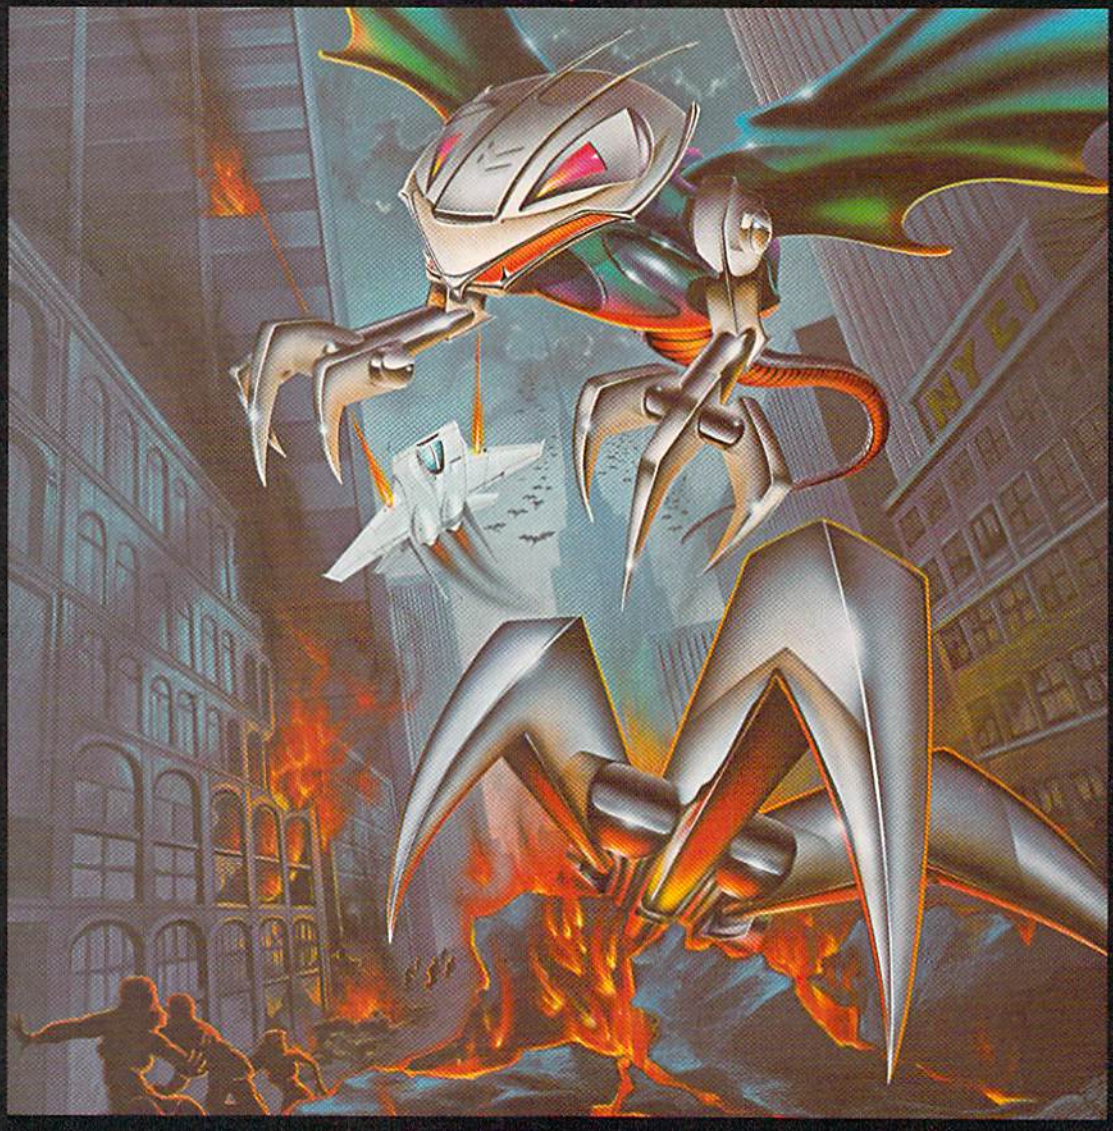
Plus, FACEMAKER helps familiarize children with such computer fundamentals as menus, cursors, simple programs, and graphics. FACEMAKER won't make parents frown because their children will have fun making friends with the computer.



SPINNAKER™
We make learning fun.

Disks for: Apple, Atari, IBM PC and PCjr, Commodore 64.
Cartridges for: Atari, IBM PCjr, Commodore 64, Coleco Adam.

Save New York!™



It was as peaceful a day as New York ever gets, when suddenly the sky went dark and a monstrous droning noise filled the air. Hordes of grotesque aliens were swooping down from all sides, biting into the Big Apple as if they hadn't eaten for days. They were laying eggs, too. Horrible slimy things that got down into the subway tunnels and began clawing their way up. If anyone was going to save the city, it would have to be me. I leapt into my rocket and began blasting away. I thought I stood a fighting chance, but fuel's running low… another wave of invaders on the horizon… signing off…

SAVE NEW YORK.™ For the Commodore 64.

THE EDITOR'S *notes*

GAZETTE On Disk!

Last issue, we announced that we would be beginning a subscription service through which you could receive a monthly disk containing all significant programs from each issue of COMPUTE!'s GAZETTE. We promised full details in this issue, and here they are. We've revised it a bit from the structure that we briefly outlined in our February issue.

Rather than begin the program by actually extending your GAZETTE subscription, we're going to treat the GAZETTE Disk as a separate entity. Thus, you may subscribe to COMPUTE!'s GAZETTE, for example, and later subscribe to COMPUTE!'s GAZETTE Disk. You could even subscribe to the GAZETTE Disk alone, but best make sure you can get your hands on a copy of that month's issue of the GAZETTE. All of the article text and explanations will still appear only in the magazine. The goal of GAZETTE Disk is to free you from the time and energy necessary to type all of these programs in every month. And the disk should save you debugging time as well.

Here's the information you'll need to begin your charter subscription to COMPUTE!'s GAZETTE Disk:

The disk service will begin with the May or June issue of the GAZETTE. The logistics of getting the service started require that these be the earliest possible issues.

Price for a single issue ordered by phone from COMPUTE!'s GAZETTE is $7.95 plus $1 shipping/handling.

Price for a six-month subscription is $39.95.

Price for a twelve-month subscription is $69.95.

Each issue of the GAZETTE Disk will contain all of the programs in the corresponding issue of the magazine (with the exception of short program examples or other programs that are only a few lines in length).

You'll receive each subscription issue by first class mail at approximately the same time you receive your copy of the magazine. If you order a single copy disk instead, you'll receive it approximately two weeks after you place your order.

Each issue's programs will arrive on a first quality disk, duplicated and tested to our specifications. Charter subscribers (those who subscribe prior to March 30), and those who order the first issue of the GAZETTE Disk, will receive as a bonus the excellent word processing program by Charles Brannon that appeared in our January 1984 issue.

We're rather excited here about the launch of our first disk service. You'll save time and typing headaches, and we'll be delivering the same excellent quality in a format you won't have to debug. And best of all, we've taken an aggressive pricing approach that allows us to deliver you a tremendous amount of first-rate software, *including disk and postage*, for less than $6 a month on a twelve-month basis. By the way, you won't need to specify whether you have a VIC or a 64... each issue will be designed to have the programs for both.

Enjoy your GAZETTE this month, and we'll look forward to sending you the first issue of the GAZETTE Disk.

Robert Lock

Editor In Chief

To reserve your charter disk, write to COMPUTE!'s GAZETTE Disk, P.O. Box 5406, Greensboro, NC 27403. Indicate whether you wish to order (1) a twelve-month disk subscription for $69.95, (2) a six-month disk subscription for $39.95, or (3) a single issue for $7.95 plus $1 shipping/handling. Outside the United States and Canada, please add an additional $3 per individual disk ordered for shipping/handling. For a six-month subscription add an additional $18. For a twelve-month subscription, an additional $36. All prices are in US funds.

If you could live on half your income, just think what you could do with the other half!

Lifestyle Budgeting™.

the first budget planning system that considers all your needs.

Others have done it ... so can you.

Dr. Harper Roehm, the author of ***Spending Less and Enjoying It More*** (the McGraw-Hill book that provides the basis for this system), designed **Lifestyle Budgeting** when his income was cut in half due to a career change from corporate auditor to university professor. As a result, his family has lived comfortably, fulfilling their "wants" as well as their "needs" for over 20 years.

We show you "why" as well as "how."

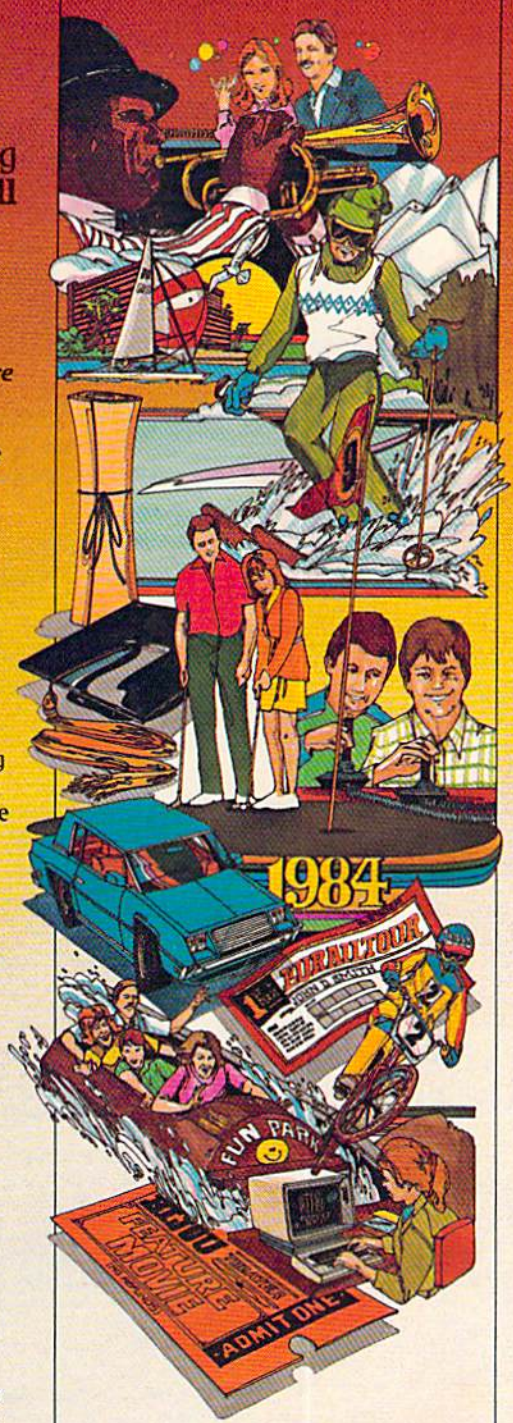
Lifestyle Budgeting is the **first complete budgeting package** to include an easy-to-understand book explaining the behavioral aspects of successful budgeting as well as software to handle the mechanics. It takes a practical approach, showing you not only how you're spending your money, but why ... so you can identify your true priorities and plan for them.

Planning is the key.

Lifestyle Budgeting's software is a forecasting and modeling tool, not a checkbook balancer. It will track your spending patterns, identifying where you're wasting valuable funds. Using that information, and your family's priorities, it will show you specifically how to project and plan future costs.

Little time, and no accounting experience required.

Unlike most budgeting systems, **Lifestyle Budgeting** does not require detailed expense records. It will only take a couple of nights to set up and then only one or two hours a month to monitor. And ... a big plus ... **Lifestyle Budgeting** is written for you, not your accountant.



Use Lifestyle Budgeting on your personal computer.

Since **Lifestyle Budgeting** is something everyone needs, versions are available for IBM, Apple, Commodore, Atari and Coleco personal computers.

Get control of your money today!

Lifestyle Budgeting will be available through your local computer retailer starting in February ... but **why wait?** You can order the complete package today.

Order now!

WordPro 3 Plus™/64

The #1 Selling Word Processor for the Commodore 64™

Now Includes SpellRight Plus! Spell Checking Program

WordPro 3 Plus™/64 and SpellRight Plus™ provide a total word processing solution for the Commodore 64™ which gives you:

- ★ Sophisticated Word Processing
- ★ Built-in Mail Merging for Form Letters
- ★ Math Functions for Column Totals
- ★ Fast and Complete Spell Checking via SpellRight Plus
- ★ A Super Value (two programs) for Only $99.95!

WordPro and SpellRight are both specifically designed for the novice user with no computer or word processing experience whatsoever. And with over 40,000 WordPro versions sold, you can be sure that WordPro is a very sophisticated word processor loaded with powerful features including: Transfer, Insert, Delete, and Rearrange Text, Auto Page Numbering, Math Functions, Headers, Footers, Global Search and Replace, the Ability to Create Multiple Personalized Letters and Documents, and much more. WordPro can create documents of virtually any length and will print up to 165 columns wide. You get all of this PLUS fast and complete spell checking using SpellRight Plus!

SpellRight Plus locates and highlights misspelled words and then allows you to quickly correct the misspellings — improving the quality of your letters and reports.

And, best of all, WordPro and SpellRight's powerful arsenal of features can be put to use almost immediately — by even the novice user. So whether you're a student, professional writer, in business, education or a hobbyist, you'll quickly become a WordPro Pro!

Both WordPro and SpellRight Plus are also available separately at popular computer outlets nationwide.

Invest in the best . . .WordPro Plus. In a class by itself.

GAZETTE FEEDBACK

EDITORS AND READERS

Do you have a question or a problem? Have you discovered something that could help other VIC-20 and Commodore 64 users? Do you have a comment about something you've read in COMPUTE!'s GAZETTE? We want to hear from you. Write to Gazette Feedback, COMPUTE!'s GAZETTE, P.O. Box 5406, Greensboro, NC 27403.

Restoring DATA

I am writing an educational program for my 2½-year-old, but I've run into a small problem. I want to play a short tune when a correct answer is given, but after running the program once, I get an OUT OF DATA error message. My question is this: How do I get the program to reread DATA statements?

Jeff Nicholas

When running a program, BASIC uses memory locations 63–66 as "data pointers." These pointers act as a checklist. Whenever the program READs an item from a DATA statement, it also updates the pointers. The next READ looks at the next item, based on what is in the pointers. If there are more READs than DATA items, the computer prints the error message and stops the program.

In answer to your question, the pointers can easily be reset with the RESTORE command. This command can be placed anywhere within a BASIC program, and will reset the pointers to the beginning of the DATA items. For example, the following BASIC program would continuously READ the first DATA number and never get to the second.

```
10 READ A: PRINT A: RESTORE: GOTO 10
20 DATA 1, 2, 3
```

Another command, more drastic than RESTORE, is CLR. When a BASIC program sees CLR, it resets the data pointers (so you can READ the DATA statements again) and all variables are CLeaRed. Numeric variables are set to zero and string variables are erased. It also clears the variables and pointers for FOR/NEXT loops and GOSUB/RETURNs.

In addition, anytime you LOAD, RUN, or NEW a program, the data pointers are automatically reset.

Bad Disk Saves

I have a Commodore 64 with a 1541 disk drive, and have encountered a problem that perhaps you can help with. When saving and replacing programs on disk, sometimes certain programs will replace the wrong programs on disk. For instance, I SAVEd a program using the *save with replace* command, following the procedures in the 1541 instruction manual. The program SAVEd OK, but it messed up another unrelated program on the disk. Is there anything I can do to solve this problem other than always maintaining a backup disk? What's to stop the same thing happening to the backup disk?

Davin Dahlgren

We have covered this problem before, but because we still receive a large volume of mail about this bug, it's worth covering again.

Creating a backup disk is not the solution to your bad saves. The problem is with the save with replace *(SAVE "@0:filename") command itself; it is sometimes prone to error. This problem has popped up in Commodore disk drives throughout the years. Although the 1540s and 1541s were supposed to have an updated DOS that solved this problem, it apparently still exists.*

The answer to your question is simple: Don't use the save with replace command. We recommend you either scratch (PRINT#15, "S0:filename") the old program before SAVEing, or SAVE the program using a different filename.

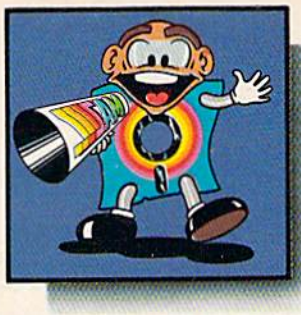
Colorful Sprites

I recently purchased a Commodore 64. I have read the book which comes with the computer. In the chapter that deals with sprites, it doesn't mention how to change the colors of the sprites. Can you tell me how?

I would also like to know how to tell if two sprites collide.

Glenn Yellico

The memory locations you POKE to change the colors of sprites 0 through 7 are addresses 53287 to 53294. The POKE values to change colors are 0 through 15,



What do voice synthesizers have in common with movies?

They don't make them like they used to.

Because now there is S.A.M. The Software Automatic Mouth.™ The first software-only speech synthesizer for Commodore 64, Atari and Apple computers.

Developed by Mark Barton of Don't Ask Software, S.A.M. is designed to give you all the power of conventional hardware speech devices. Without the hardware.

And without the high price.

S.A.M. is the program that makes other programs talk. Business programs. Educational programs. Recreational programs, too.

You can use it in any number of useful ways.

To write instructions that talk. Stories that tell themselves. And creative new games with characters that converse or opponents that crack jokes.

And you can do it all with ease. With phonetic or plain English input.

S.A.M. can say anything you like, any way you like—you choose the pitch, tone, speed and inflection.

If you want, you can even choose the voice.

Here's talking to you, kid.

(The Apple version includes an 8-bit digital-to-analog converter and audio amplifier on a card. It requires 48K and a speaker. The Atari version requires 32K.)

Say it again, S.A.M.

S.A.M.

corresponding to the 16 colors available on the 64. Below you'll find a chart of some of the more useful sprite control memory locations.

Sprite collision is defined by the Programmer's Reference Guide *as occurring "... when a non-zero part of a sprite overlaps a non-zero portion of another sprite or characters on the screen." The byte you PEEK to detect a sprite-to-sprite collision is 53278. For a sprite-to-background collision, PEEK 53279.*

These bytes normally have a value of zero. The eight bits in these memory locations correspond to the eight sprites. When a collision is detected, the corresponding bit is set to 1. The bits will remain set until the bytes are PEEKed. Once PEEKed, the bytes are automatically reset to zero. It should also be noted that sprite collisions can occur even if the sprite is off the screen.

Function	*Location(s)*
turn on sprite	*53269*
sprite data pointers	*2040–2047*
sprite color	*53287–53294*
expand sprite X	*53277*
expand sprite Y	*53271*
turn on multicolor	*53276*
multicolor one	*53285*
multicolor two	*53286*
sprite/sprite collision	*53278*
sprite/data collision	*53279*

For more information on sprite programming and what values to POKE into the above locations, consult your Programmer's Reference Guide.

MLX Techniques

I used MLX to enter a machine language program from COMPUTE!'s GAZETTE, but I entered the wrong ending address. When MLX reached that address, it turned off and I could not add any more lines to the program. How can I finish my program? Is there any way I can LIST an ML program from MLX?

Roger C. Fitch

When machine language programs are published in COMPUTE!'s GAZETTE, *the MLX program can be found in the listings section. The short explanatory article about MLX (usually found in the gray pages preceding the program listings) is very helpful.*

In addition to its main function of entering machine language programs, MLX recognizes four commands:

SHIFT-S (Save) will save a copy of the machine language program to tape or disk.

SHIFT-L (Load) will load a previously saved program.

SHIFT-D (Display) will display the machine language program currently in memory. This is the equivalent of BASIC's LIST.

SHIFT-N (New Address) allows you to begin typing at a different address. The addresses appear as line numbers in the MLX listing.

If you entered the wrong ending address, use SHIFT-S to save what you've typed, then reRUN the MLX program, entering the correct starting and ending addresses. You can then use SHIFT-L to load what you've already typed. To continue with the listing, use SHIFT-N to skip ahead to the line number where you need to start. Be sure to read the MLX article in this issue for more details.

Musical Power Supplies

I own a Commodore 64, and I have a question about the power supply. When I plug it in, it starts to hum. The humming noise seems to get lower the longer the machine is on. Is this something I should be worried about? Could you please explain the noise?

Todd Blecher

According to a representative at Commodore, this is nothing to be concerned about with either the VIC-20 or the 64. It is quite common for small transformers such as the one inside your power supply to hum. This is caused by the metal plates in the transformer vibrating as the 60 cycle per second electric current passes through it. You've probably heard the same hum from the transformers in fluorescent lights.

The thing to watch out for in all power supplies is heat. If your power supply is operating at an excessively high temperature, take it back to your dealer and have it checked.

Heat, Humidity, And The Computer

I recently purchased a Commodore 64, and I have two questions. First, I'd like to put the computer downstairs where I have room for it, but in the summer it gets very muggy and damp down there. Is this atmosphere bad for a computer? Second, can I use my own tape recorder with my 64 or do I have to buy the Commodore Datassette?

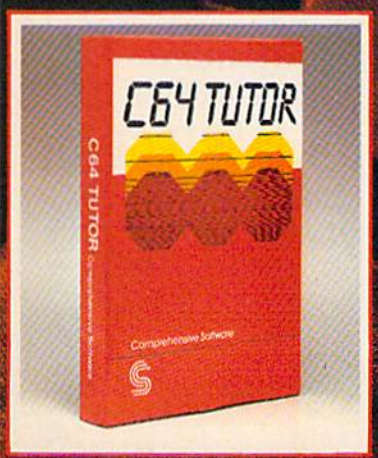
Robert Zarriello

Environment can be an important factor for your computer. The moist atmosphere you describe could be harmful. If the humidity is so high that water condenses in the computer casing, it could result in permanent damage.

Extremes of heat and humidity are also enemies of tapes and disks. A program saved on a hot day when the tape or disk is very flexible might not load properly on a cold day when the plastic material used in tapes and disks is much stiffer.

Another thing to watch out for is ventilation. The computer and its peripherals should be in a place where they are well ventilated and can be kept cool. Also, watch out for rooms that are heavily carpeted, especially those with wool carpets. The static electricity created as you shuffle across the room could bring the computer down (lock it up), or it might even permanently damage the chips in the computer, or erase data stored on magnetic media.

BREATHE LIFE INTO YOUR C64



Now that you have it, put it to work. C64 TUTOR puts you in charge with a Commodore 64 tutorial, screen display editor, sprite editor, music synthesizer & programmer's calculator.

Use the tutorial to learn what your Commodore 64 can do. And how to do it. Create, edit & save one page of letters and/or pictures with the screen display editor. Enter sprites from the Commodore Manual. Or make up your own. Then edit and save them using the sprite editor. Sprite creation is quick, and easy. Play music with the music synthesizer. Use the programmer's calculator to add, subtract, multiply & divide in decimal, hexadecimal and binary. Includes AND, OR, XOR, Shift and 1's complement functions.

Great for new users. C64 TUTOR cures computerphobia and promotes computer literacy.

Take it from me, with a little power, the possibilities are endless.

Available for $29.95 at your computer dealer.

Comprehensive Software Support,

2316 Artesia Bl. Suite B,
Redondo Beach, CA 90278
213/318-2561

Yes, you can use a standard tape cassette recorder with the 64 and the VIC-20, but you will need a special interface not made by Commodore. You can expect to pay between $20 and $30. Contact your local computer equipment dealer for information on the available interfaces.

However, we believe that the Datassette is a very durable and reliable recorder.

Crunching To Save Memory

Occasionally, when I am writing a program, I abbreviate BASIC keywords. However, when I list the program on my VIC-20, all the keywords are displayed full length, and I can't remember which ones I've abbreviated and which ones I haven't. Is there some technique by which I may disable this and crunch my programs faster?

Ted Targosz

Your programs are crunched. BASIC command keywords are stored internally as one-byte tokens. Whether you enter them in the "crunched" form (for example, ? for PRINT) or type in the full word version, the machine still uses a one-byte token.

When you enter a line in the crunched form then LIST the program, it will print the whole BASIC keyword. This is simply a convenience of the screen editor, and does not use any additional memory.

For example, turn off your VIC or 64, turn it back on, then enter the following BASIC line:

```
10 PRINT "ABC"
```

Now type PRINT FRE(0) (this is the command that tells you how much unused BASIC memory is left). Jot down this number, then turn your machine off and on again.

Now enter the same BASIC program in the following crunched form:

```
10 ?"ABC"
```

Again, type and enter PRINT FRE(0). You'll now see that the amount of memory left is the same, even in the crunched form.

For even more proof, LIST the program. The BASIC line is now uncrunched. Again enter PRINT FRE(0). The amount of unused memory still has not changed.

If you're looking for ways to make your BASIC programs use less memory, there are many. The most common and most useful is to simply get rid of unneeded spaces within the BASIC program lines. But don't worry about those BASIC command keywords; they use up only one byte no matter which way you enter them initially.

Using An 8-Pin Plug With The 64

I have a question concerning the Commodore 64. In your article on improving the TV quality on the 64, all of the information refers to the 5-pin plug on the back. I have one of the new models with the new 8-pin plugs, and have yet to see a pinout diagram for it. I would like to make the changes indicated in the article, but I don't know which pins do what. Can you help?

Mark Poole

Here is a list of the eight pin connections on the new Commodore 64s, and what they do:

Pin	*Purpose*
1	*LUMINANCE same as 5-pin*
2	*GROUND same as 5-pin*
3	*AUDIO OUT same as 5-pin*
4	*COMPOSITE VIDEO same as 5-pin*
5	*AUDIO IN same as 5-pin*
6	*CHROMINANCE without luminance*
7	*UNUSED*
8	*CHROMINANCE without luminance*

Disk Drive Solution Update

In December's "Gazette Feedback," we printed a letter from Sieg Deleu, president of Kobetek Systems Limited, stating that his firm had the ROM kits for converting the 1540 disk drive to a 1541. Several readers have written asking for Kobetek's address. Here it is:

WANTED!
SOFTWARE AUTHORS

Broderbund Software is looking for new authors—both in-house and freelancers—to join its international team of programming wizards. If you have an original, machine language entertainment product for the home micro market, let us show you the advantages of working with our team of design, production and distribution specialists.

Call or write for a free Author's Kit or send us a machine readable copy of your work for prompt review under strictest confidence. You have nothing to lose and perhaps a great deal to gain.

Broderbund Software™
17 Paul Drive, San Rafael, CA 94903, Tel:(415) 479-1170

If you own a Commodore 64™

(or are thinking of owning one)

– be sure that you also get a Calc Result

Calc Result is the worlds most cost effective spread sheet for the worlds most cost effective computer–The Commodore 64™.

Calc Result at home

Use it for loans and mortgages, home budget and cash flow, stock portfolio, personal net worth, IRA analysis, travel expenses, gas and electricity bills, bar charts and many more areas.

In business

Use it for budgets, calculation, simulation, construction, planning etc. Used by managers, salesmen, scientists, doctors, lawyers, dentists, consultants, accountants...

There are two versions of Calc Result

Choose the one that is most suitable for you.

$79.95

Calc Result Easy

Single page spreadsheet (64 columns × 254 rows). Built in graphics. Formula protection, flexible printout, color, conditional functions and mathematical functions. Delivered on plug–in cartridge. Data storage on cassette or disk.

$149.95

Calc Result Advanced

All functions in Calc Result Easy plus 32 pages (Three-dimensional viewing). Page add, window, split screen (up to four pages on the screen at the same time), and help functions. Delivered on plug-in cartridge plus disk. Requires disk drive.

609-663-0660

Computer Show And Tell

Fred D'Ignazio, Associate Editor

In a recent issue of COMPUTE! (October 1983), I wrote about educational computing at home and at school as isolated "islands" of computer learning. I expressed the fear that unless bridges were built between these islands, much of the computer's educational potential would never be realized.

In the article, I suggested some home-school bridges that Kenneth Komosky (Educational Director of the Educational Products Information Exchange—EPIE) and I had come up with, including:

- Community-wide training of parents, teachers, and children.
- Community-wide computer cooperatives in which computer vendors work with schools and families to disseminate information about computers and offer discounts to families (especially low-income families).
- Communication—A Parents and Teachers Computer Association could be formed. It could hold monthly meetings and publish a monthly newsletter that evaluates new computer products and educational software, and spreads the word about educational computing activities going on in homes, classrooms, and libraries in the community.
- Opportunities for Action—The community could organize computer faires, computer flea markets, and "brag nights" to show what the kids are doing with computers at home and at school.
- Sharing—The community could begin collecting old computers and software and set up a "computer library" (perhaps as a section of the public or school library). The library could keep review materials on the latest hardware and software; it could help increase the ratio of computers to kids in school; and it could make computers available for low-income members of the community. A library could serve an especially valuable purpose by collecting information on the ways computers can help special children who are learning disabled, or physically or mentally handicapped.

Starting Simple

The program to link home and school computing is extremely ambitious. It is not something that can be implemented overnight. It is a good idea to start simple with one or two bridge-building activities, then add new activities gradually. I have found this out from personal experience.

In my hometown, Roanoke, Virginia, I am trying to put some of these ideas into practice. In the last few weeks I have learned that building computer bridges between home and school is a major undertaking. All we have set up, so far, is a swaying, rickety footbridge made up of popsicle sticks. But it's a start.

A Warm Reception

I have a five-year-old son (Eric) in a local kindergarten and an eight-year-old daughter (Catie) in third grade.

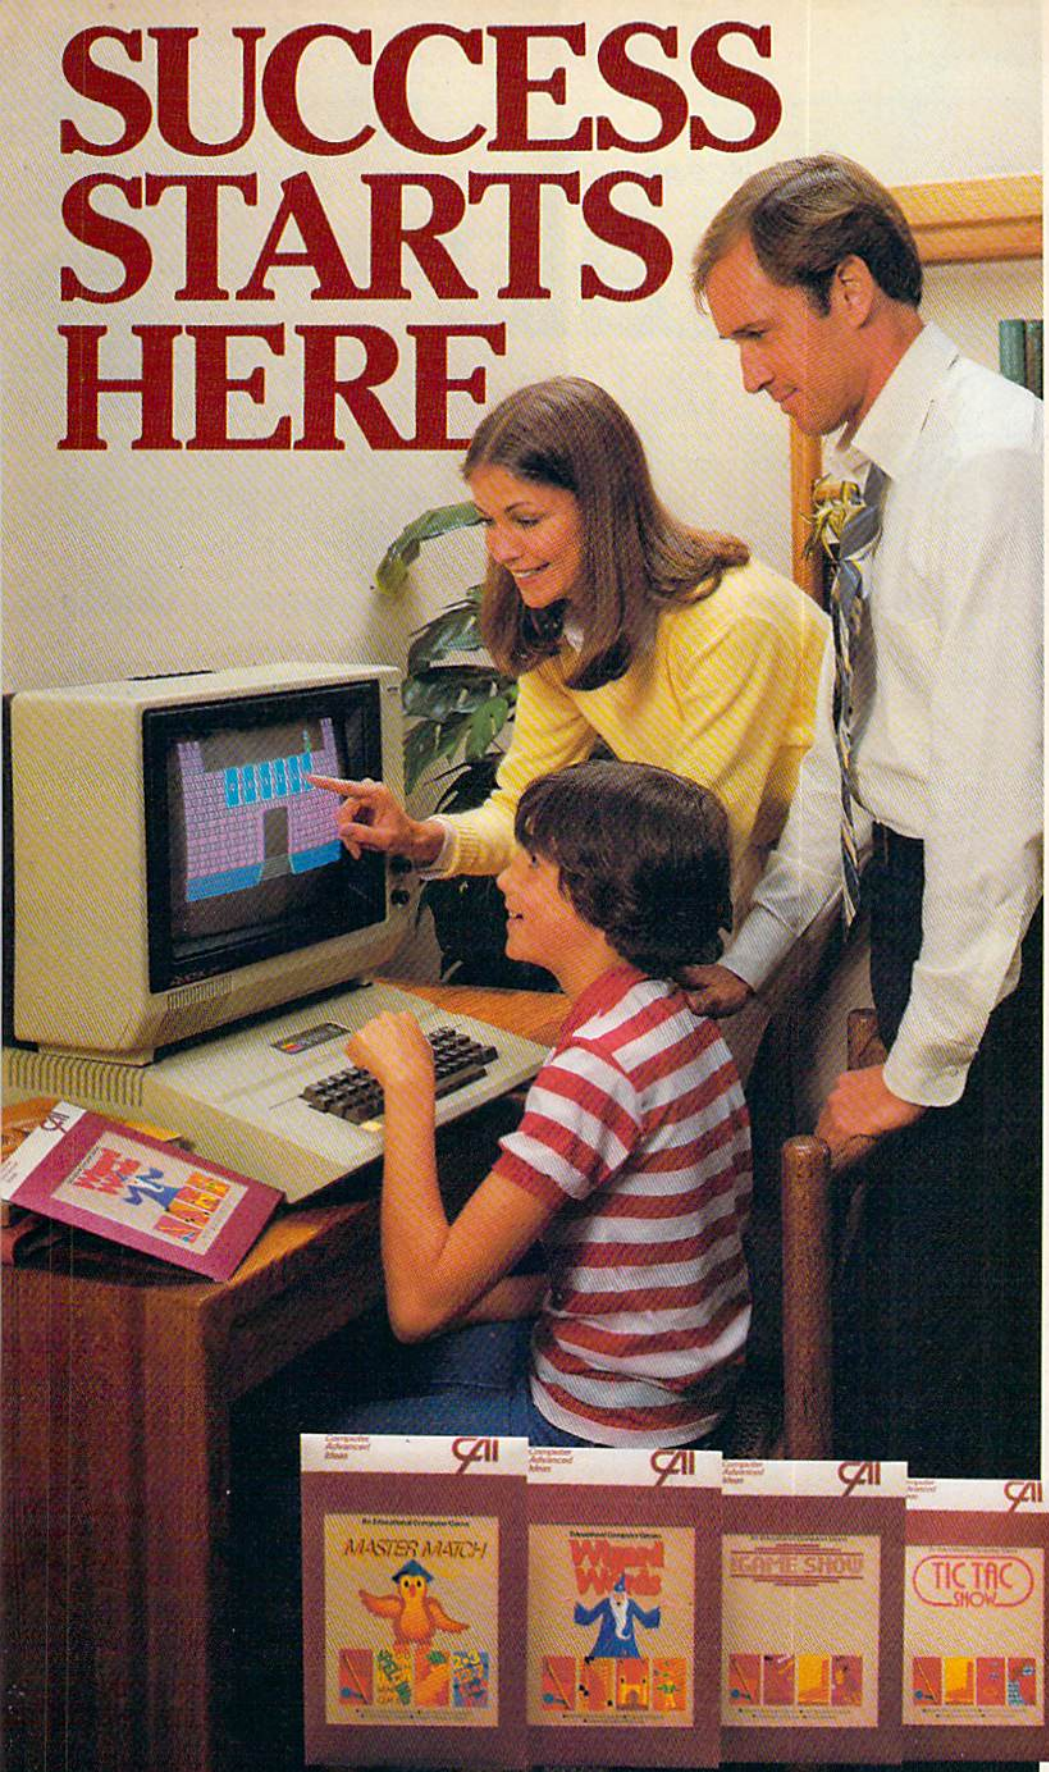
I began my bridge-building project by calling Catie's teacher, Mrs. Albertson, and volunteering to loan the school an extra computer we had sitting around the house.

I was nervous about calling Mrs. Albertson and offering her the computer. I was afraid that she might not want a computer in her class. I was worried that she would think I was an uppity parent bent on interfering with her teaching.

I was wrong.

"What a terrific idea!" Mrs. Albertson said when she heard my proposal. "We'd love to have a computer in the room. When can the computer come for a visit?"

SUCCESS STARTS HERE



The day you bring your first CAI™ learning game home and watch your child play, you'll know the excitement of a winning choice.

Active Family

Your family and CAI's growing family of animated, full-color programs have a lot to share —beginning with a willingness to reach beyond the ordinary to achieve the best.

At Your Command

You may meet a princess, a juggler or a dragon in *Wizard of Words.*™ You may appear as a guest on TV in *Master Match,*™ *The Game Show*™ or *Tic Tac Show.*™ Or, you may extend these programs still further with our *LearningWare*™ diskettes, offering hundreds of questions matched to the teaching strategies in the games. In every case, CAI puts a world of imagination and learning at your fingertips. And puts you and your child in control.

Unique Approach

Key features place CAI thinking tools in a class by themselves: Each program comes with its own *library of subjects.* But that's just the start. Our unique *authoring system* let's you or your child create your own lessons on any topic, tailoring the program to your family's needs —and no computer knowledge is required. Add the fact that we've kept the vital ingredient –*FUN*– in learning, and our *proven success* is no surprise. Over 2,000 school districts now use CAI programs to teach essential vocabulary and logic skills in a variety of subject areas.

CAI supports its products —and you —with an unconditional guarantee and a free backup disk. And provides compatibility with the most popular computers: Apple,® IBM® (and soon Commodore™).

Wise Choice

CAI is a group of experienced educators and programmers who believe that success begins with opportunities you create at home. Ask to see a demonstration of CAI programs at your local computer store, and see for yourself just how rewarding a good education can be.

Introducing MusiCalc™

The Creative Music System

MAKE MUSIC PLAY On Your Commodore 64™

Put the MusiCalc™ diskette into your Commodore 64. Sit down. And brace yourself.

You're about to discover an entirely new way to make music. With MusiCalc, the creative music system that makes music play. Almost instantly, the whole family will be able to create and perform all kinds of music. From rock 'n roll to technopop, from classical to country western.

MusiCalc makes music more fun, more rewarding and easier than it's ever been before.

NOTEWORTHY SOFTWARE

MusiCalc software turns your Commodore 64 computer with disk drive into a sophisticated musical instrument. And it turns you into a composer, performer and conductor.

MusiCalc 1's Synthesizer & Sequencer is the heart of the system. With it you can use your computer keyboard to program the tempo, key and style of music you want, and also to play your favorite tune. The computer screen will show you what the music's doing as you play and how to control it.

Start by selecting one of MusiCalc's preset scores. Try combining that with a preset sound you like. Choose the scale you want to play in—anything from jazz to Japanese.

Presto! You've got music.

Exercise your musical creativity by putting the three voices together any way you want, and playing whichever parts you'd like. Make changes and add special flourishes to create your own compositions.

Even a musical novice will sound good right away. And the greater your musical talent, the more challenging and exciting MusiCalc becomes.

BACH TO BASICS

Although simple to learn, MusiCalc was designed to meet the needs of professional musicians. In fact, it delivers the quality and capabilities professionals have spent thousands of dollars for—up until now. Once you have the Commodore 64 computer and disk drive, you can get started for under $100 with the MusiCalc 1 Synthesizer & Sequencer.

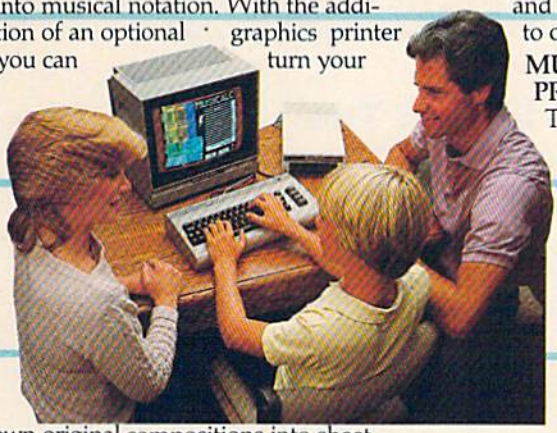
This is a standalone software program you'll never outgrow. And with the variety of other MusiCalc products currently available, plus the many more items Waveform will be introducing in the months ahead, you can expand your music system along with your interest and ability.

THE MUSICALC SYSTEM

MusiCalc includes a full line of software that brings great music as close as the keypad of your Commodore 64.

MUSICALC 1, Synthesizer & Sequencer Turns the Commodore 64 into a sophisticated musical instrument—a three-voice synthesizer and fully-interactive step sequencer. Play along with a song or write your own. Develop your own instrument sounds. And record the music you create.

MUSICALC 2, ScoreWriter™ Works with the Synthesizer & Sequencer to change your musical improvisations into musical notation. With the addition of an optional graphics printer you can turn your



own original compositions into sheet music. Requires MusiCalc 1 to operate.

MUSICALC 3, Keyboard Maker™ Enables you to create your own custom musical keyboards. Comes with over 30 preset keyboard scales from around the world—everything from classical to rock. Requires MusiCalc 1 to operate.

MUSICALC TEMPLATE 1, African and Latin Rhythms Add this to the MusiCalc 1 system and it provides additional musical scores and patches you can play along with or use to develop your own compositions. Requires MusiCalc 1 to operate.

MUSICALC TEMPLATE 2, New Wave and Rock Works like Template 1 and features the latest Technopop scores and sounds. Requires MusiCalc 1 to operate.

MUSICALC PROFESSIONAL SYSTEM The MusiCalc Synthesizer & Sequencer, ScoreWriter, and Keyboard Maker, plus the two Templates, in one cost-saving package.

HIT DISKS Recordings to play on your computer. Original Technopop compositions, current hits and old standards performed by the Waveform Band. Ask your dealer about current releases.

COLORTONE KEYBOARD AND MUSICALC 4 A totally new concept in keyboards, ideal for everyone from novice to professional. A professional quality keyboard that's remarkably easy to learn how to use. The keyboard comes with special software that allows it to work with MusiCalc 1 and 2, enabling you to play music on the keyboard and record it on disk to play back or print out later. Add MusiCalc 4 and play any scale in any key, for even greater musical capability. **Available soon.**

DEMO DISK An entertaining and informative demonstration of the capabilities, features and uses of the entire MusiCalc System. Also available in tape cassette.

MAKE MUSIC PLAY

MusiCalc will make music come alive for the entire family. It's a fun and educational way to introduce your children to music and computers. And no matter what your background, you'll find yourself playing and understanding music in an exciting new way.

Ask your computer or music dealer about MusiCalc. Or send in the attached coupon and $5 for the MusiCalc Demo Disk or cassette. Discover MusiCalc, the creative music system.

CG2

I told Mrs. Albertson that we didn't have a TV set or monitor for the computer. She would have to scavenge one somewhere. Also, I told her that the class would need a table for the computer and a six-foot-square space in the room next to an electrical outlet. Mrs. Albertson said she'd talk to the lower-school principal and see what she could do.

The Project Grows

Two weeks later, Mrs. Albertson called and told me that she had talked with the lower-school principal, the headmaster of the whole school, and the head of student government. Everyone had gone looking for funds and had put together enough money to enable Mrs. Albertson to buy a new 20-inch color TV for the computer.

After hearing about the TV, I didn't even ask about the table, the space, and the electric outlet. I was sure that they, too, had been taken care of. When I visited the classroom a week later, I found they had.

Mrs. Albertson said that everyone at the school was excited about the project because they hoped that the computer could become a resource for the entire third grade, and, secondarily, for the whole lower school. It was to be the first computer for kindergarten through grade three.

Enlisting The Local Computer Store

I was so encouraged by the school's response that I drove over to the local computer store and proposed that they get involved, too. I showed them my "Islands Of Learning" article in COMPUTE!, and I asked them what they would like to contribute to our bridge-building project.

The computer store owners' response was amazing. They said they would be happy to donate two disk-based computers to the school for a trial, two-month period. They also offered a discount on all computers purchased by parents if the school handled the purchases.

I volunteered to act as educational software consultant to the store and to tell the store owners about the most popular programs that we used over at the school. We would test the programs in school, then let the store know which ones were best.

Where Should The Computers Go?

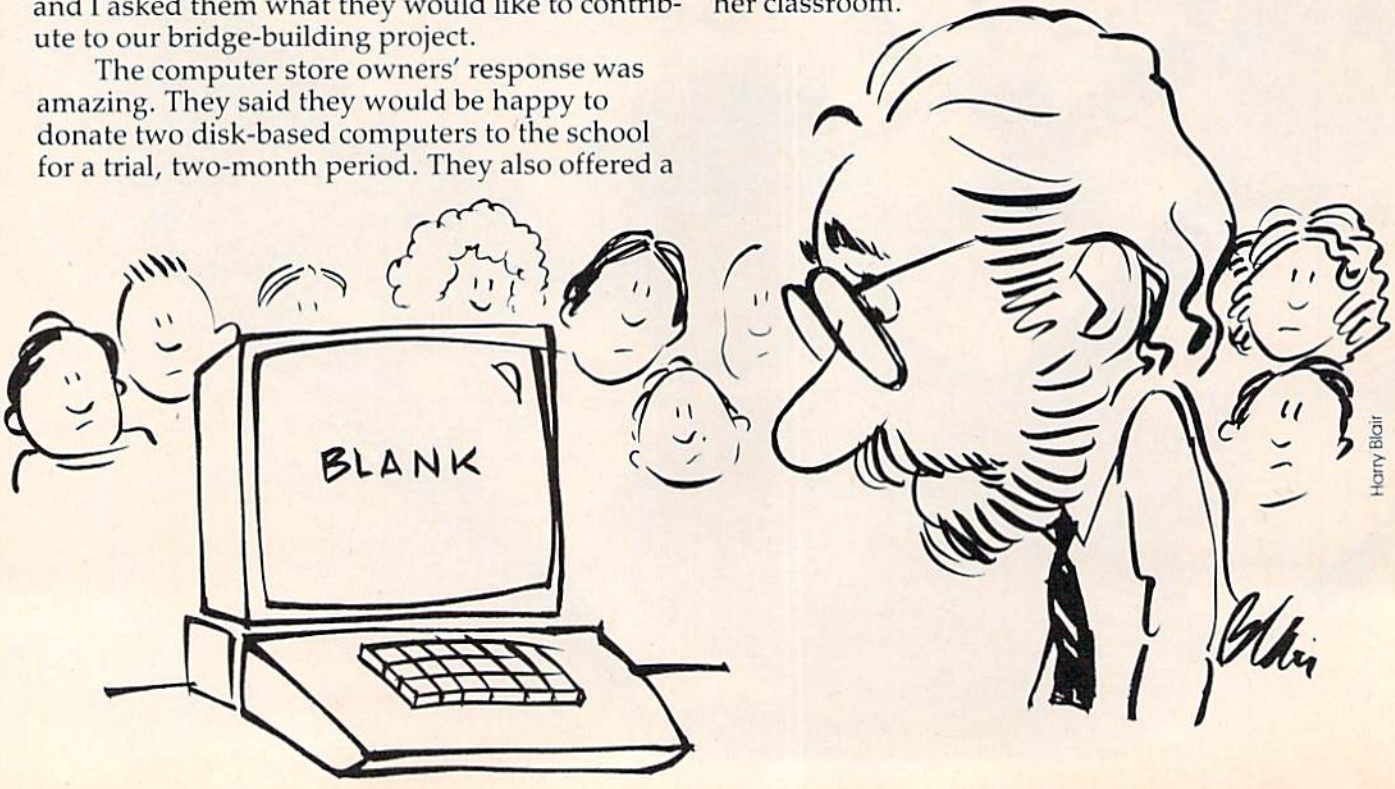
I spent the next few nights on the phone with Mrs. Albertson and with Eric's two teachers, Mrs. Paitsell and Mrs. Carling.

I proposed that the second computer go into Eric's kindergarten class. That would make computers available in the kindergarten and third grades. The first and second graders could try out the programs that would be running on the third-grade computer. Their teachers could also take them to the kindergarten and let them try the programs for younger children that would be running on the kindergarten computer.

I liked this approach because we could experiment with using the computer at two distinct developmental levels. It would be interesting to see what programs would work best with the different age groups.

A Sneak Preview

Catie and Eric's teachers felt that I should bring a computer to the school for a visit before we permanently installed the computers in the classrooms. Mrs. Albertson had a table, a space, an electrical outlet, and a big color TV, so we used her classroom.



An educational ad about educational software.

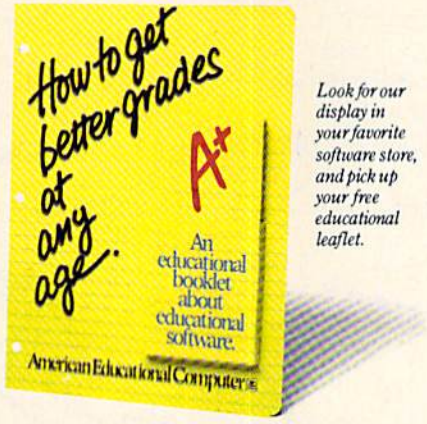
YOU studied all the computers and finally chose the one your family found most useful. One of the main reasons you wanted a computer in the first place is to help your children in school. Not just to teach them how to use a computer, but also to help them get good grades in basic school subjects like reading or geography.

That's why you should know about AEC, American Educational Computer – one of the country's most important developers and publishers of educational software.

You can help your child all the way through school and beyond.

AEC grew up on education.

The management of AEC started in educational publishing, with collectively over 100 years of experience in the field. AEC knows curriculum and how American education is practiced in the classroom. That's important because children should learn at home the same way they learn at school. Otherwise, you'll have a very confused child, and confusion is not the way to better grades or better learning.



How to get better grades at any age.
A+
An educational booklet about educational software.
American Educational Computer

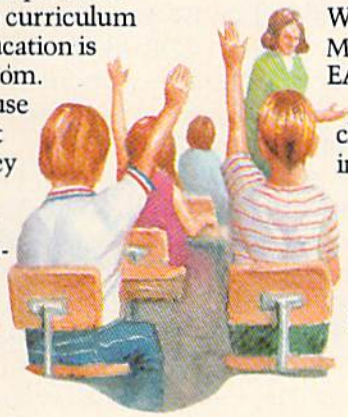
Look for our display in your favorite software store, and pick up your free educational leaflet.

AEC knows that good grades are important.

Any educational software could help school performance in some way. That's because the computer is such a patient teacher, giving instant feedback to questions and allowing children to learn at their own pace.

But AEC software has an important advantage. Our approach has been student tested under actual classroom conditions. So we know it keeps the child's interest while it teaches.

AEC gets parents involved in the learning process.



With either AEC's MATCHMAKER™ or EASYREADER™ Series, you can take your child through the grades in subjects such as Phonics, Word Attack Skills, Reading Comprehension, Spanish, World or US Geography, and Grammar. Our teacher tested system allows parents to enter material into a lively, interactive format. And because AEC's programs are grade-level oriented, you can help your child all the way through school.

AEC doesn't play games with education.

AEC programs do contain games, but only as rewards for learning achievement. For example, once your child successfully completes the objective in the Matchmaker Geography program, he or she can play an exciting, action-packed game.

Sure, the games are fun. But they're not the basis, and certainly not the primary focus, of any AEC software. Our focus is strictly on learning. And isn't that what you buy educational software for?

If you have more questions about educational software, contact your nearest AEC educational software center. And thanks for being a concerned parent.

A+

All AEC Products are compatible with Apple,® IBM® PC, Atari 800,® TRS 80™ Color and Commodore 64™ Microcomputers. TM signifies manufacturer's trademark. ® signifies manufacturer's registered trademark.

I selected Catie and Eric's best educational programs to show off at school. I drove to the computer store and picked up a computer like the two that would be donated to the school. Then I drove to the school.

Foiled By Murphy's Law

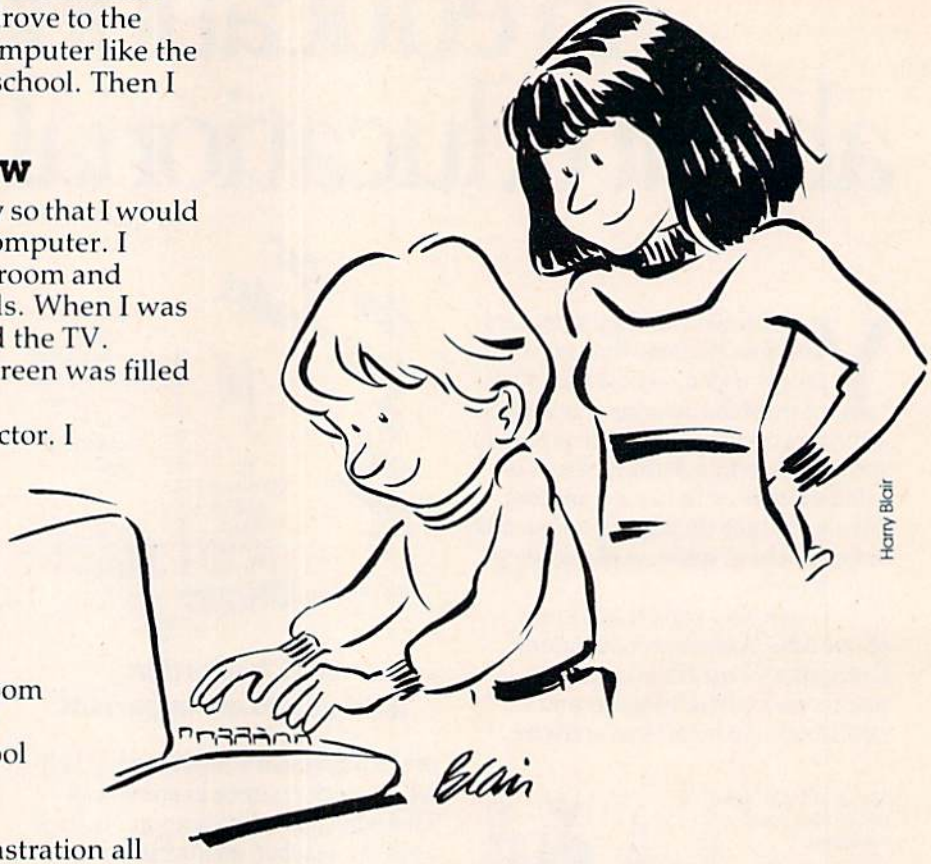
I got to the school half an hour early so that I would have plenty of time to set up the computer. I lugged the computer into the classroom and started plugging in cables and cords. When I was done I turned on the computer and the TV.

Nothing happened. The TV screen was filled with static.

I fiddled with the channel selector. I checked all the connections. I took everything apart and plugged it back in.

Still nothing.

I turned around to face the class. I was going to tell the kids about finicky computers and Murphy's law. At the rear of the room I spotted about eight adults. While my back had been turned, the school principal and several teachers had slipped into the room for the demonstration. Instead of a demonstration all they got to see was me fussing and fuming at the dumb computer.



I was so embarrassed. There I was, a computer expert, and I couldn't even get a picture on the display screen.

I was afraid to look at my two kids' faces. I knew what they must have been thinking: If daddy's going to humiliate us this way in front of our teachers and friends, it looks like it's time to put him up for adoption.

Culture Shock

After a desperate phone call and a whirlwind trip back to the computer store for extra parts, I finally got the computer to work. Once it decided to work, the computer didn't embarrass me any further. It behaved itself the rest of the afternoon.

I finally relaxed. I popped disks into the disk drive and started showing off some of Catie and Eric's favorite programs—*Delta Drawing* (from Spinnaker), *KoalaPainter* on the Koala Pad (from Koala Technologies), *Rocky's Boots* (from The Learning Company), *Early Music* (from Counterpoint Software), *Math Maze* (from Design-Ware), and *Bank Street Writer* (from Scholastic and Brøderbund).

I put the disks into the computer, and Catie and Eric demonstrated the programs.

We whisked through the programs at high speed. I was hoping to show about 20 programs in two hours. The kids in the class were "oohing" and "aaahing" appreciatively. Everything was going smoothly.

Then I ran into a brick wall.

"Those programs are all very impressive," a teacher called from the back of the room (the *very* back of the room). "But they are obviously intended for older children. Don't you have anything for the children in this room and for our kindergartners?"

Whoops ....

I didn't know how to answer her. I wanted to be flip and say, "Dear lady, both of my children use these programs without any supervision. Eric has been using some of these programs since he was only two years old."

I wanted to say that, but I didn't. It had begun to dawn on me that the computer programs I was demonstrating may have looked like fun to me and the kids, but to the teachers they looked like a cram course in calculus or electrical engineering.

The teacher who had spoken walked up to the front of the room. She pointed to the display screen. The menu to *KoalaPainter* was on the screen. "There must be dozens of different options on this screen," she said. "How can we teach our kindergartners to operate a program that is this complex?"

I explained to the teacher that little kids didn't think the program was complex. Eric, for example, pretended that the menu boxes were "doors." He

"Popular Computing says The Home Accountant does just about everything you'd ask of a personal finance package."*
"The Home Accountant even flags transactions for tax time. And that's a big time-saver because I can transfer information to The Tax Advantage™ program and easily figure out what I owe."
"My company has 5 checking accounts, 6 business credit cards and 3 money market funds to keep track of. The Home Accountant makes it easy."
"You mean you can use The Home Accountant for business, too?!"
"The Home Accountant is the #1 best-selling home finance package in the world."
"Absolutely. Wouldn't want to run my consulting firm without it."
"Softalk Magazine says it's the most thorough and powerful program of its kind."†
"I agree."
"It automatically prints my checks. And gives them a very professional look."
"The Home Accountant is great for realistic budgeting."
"I'm so glad you brought it home. I never thought that creating a budget and managing money could be so easy."
"You can create trend analysis graphs for each budget category, so you can make visual comparisons of where you stand financially."
"And you can do it in full-scale color graphics."
"It has up to 200 budget categories so I have all the flexibility I need."
"The Home Accountant will even print a personal financial statement and net worth statement. Keeps me right on top of my finances."

† Apple Softalk, April, 1982

Everyone's talking about The Home Accountant.™

Is it because it's the #1 bestselling home finance package in the world? Or because it's extremely thorough and powerful and easy to use? Or because it's great for home and business use? Or because it has up to 200 budget categories and handles up to 5 checking accounts?

Yes. But there are a lot more reasons why people buy The Home Accountant. And why you will, too.

Because The Home Accountant can literally save you hours of time. And take the headache out of handling your finances. Whether it's setting up a budget, cataloging your expenses, balancing your checkbooks or handling your credit cards and money market funds. For personal or business use.

The Home Accountant will even print net worth and financial statements. Not to mention being a lifesaver at tax time. Especially when you're able to transfer information onto Continental's The Tax Advantage™ program and figure out what you owe. Quickly.

In short, The Home Accountant is the most effective software program there is for managing your money. And managing it easily.

Stop by your Continental Software dealer today and pick up The Home Accountant. You'll see what everyone's talking about.

The Home Accountant is available for Apple II/IIe, IBM PC/XT, Atari 400/800/1200XL, Osborne® TRS-80 Models III/4, Commodore 64, Texas Instruments Professional, Zenith Z-100/110, Compaq and KayPro computers. Actual budget capacities will vary with each computer.

For your free 48 page booklet, "Tips For Buying Software," please write Continental Software, 11223 South Hindry Avenue, Los Angeles, CA 90045, 213/417-8031, 213/417-3003.

opened a door just by pointing to it on the KoalaPad. Then he went through the doors into different "drawing" worlds where he made multicolored rubber bands, grew circles and squares, and drew shapes and pictures.

"Show her, Eric," I said. I picked him up and plopped him down in front of the computer. Eric showed her.

The teacher was unimpressed. "He can do all those things because you taught him," she said. "You're a computer expert. But you won't be in my classroom with me and my kids. Who's going to teach me? And how am I going to teach the kids?"

First Things First

At that moment everything became clear to me. I realized that, in my idealistic fervor, I was rushing in the wrong direction. I was trying to create new educational structures, but I was forgetting the basics. The first item on my agenda wasn't bridge building, it was *teacher training*. It would be pointless to stick computers in Catie and Eric's classrooms unless their teachers knew how to operate them and were comfortable with them.

What the teacher had said was true. The kids couldn't learn on the computers unless she taught them. And before she could teach them, somebody had to teach her.

That somebody was me.

The Prime Mover

Before I took the computer to my kids' school, I had thought that I was going to act as liaison between two ongoing computer learning centers. I saw the home as one learning center and the school as the other. The way I saw it, my job was to get the two centers communicating, sharing, and trading information and resources.

After my experience in the classroom with the kids and the teachers, I realized that, for a while, my job would be much more limited. Before I could coordinate the activities of the two learning centers, I would have to *create* them.

I realize now that I'll have to spend a considerable amount of time with the teachers to get them started using computers in the classroom. And I'll probably have to work with the parents to get them started using computers to help their children learn at home.

Before I begin building the bridge between the two islands of learning, I'm going to have to build the foundations.

Show And Tell At Home And At School

I've started inviting teachers from my children's school over to our house on evenings and weekends. We are conducting an informal teacher training workshop, and we are screening the software that we plan to use in the classroom.

I'm learning a lot.

My next goal is to create a newsletter that the kids can take home to their parents. I hope that there are a lot of parents out there who know something about computers and who read the newsletter and get enthusiastic about my bridge-building plans.

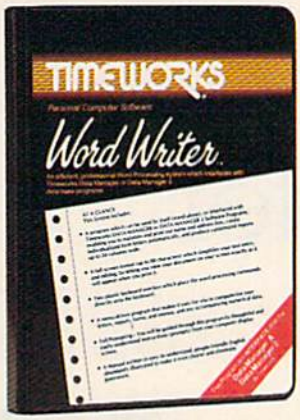
I can use their help. They can work with the teachers and help train them on the computers. They can bring their computers to school for show and tell. They can share their software with the school.

Once the teachers are trained and we have a nucleus of committed parents, we can think about organizing a Parents and Teachers Computer Association.

For the moment, though, I've got my hands full training Eric's teacher on the *KoalaPaint* program. Like the other teacher, she is boggled by the screen menu with all its boxes.

Eric is helping me train his teacher. He is very understanding and very patient. Two nights ago, during a session, he pointed at the screen with the *KoalaPaint* menu. "These are doors into the computer," he told his teacher. "Which door do you want to open first?"

IF YOU CAN FIND A BETTER WORD PROCESSOR OR DATA BASE SYSTEM WE'LL BUY IT FOR YOU.



Outrageous offer? Not really. For your Commodore 64, we're putting our money where our mouth is, because the Timeworks Word Writer and Timeworks Data Manager 2 are so complete—so extremely easy to use, we think nothing beats them at any price. (Our suggested retail prices are: $49.95 for Word Writer. $49.95 for Data Manager 2.)

Word Writer

This menu-driven system includes:

A program which can be used by itself (stand-alone), or interfaced with Timeworks' Data Manager or Data Manager 2, enabling you to maintain and print out name and address lists, create individualized form letters automatically, and produce customized reports up to 20 columns wide, which can be incorporated into any text produced by the Word Writer.

Two plastic keyboard overlays which place the word processing commands directly onto the keyboard.

A full screen format (up to 80 characters) which simplifies your text entry and editing.

All the essential features—plus some exclusive Timeworks extras—making this system completely functional for most home & business requirements.

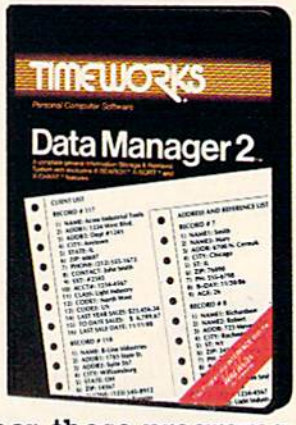
Data Manager 2

This system includes:

A menu-driven program that easily lets you store information on a wide variety of subjects—from general name and address lists, to research data. This program will also calculate and store any corresponding numerical data.

Quick access to important information. Items can be easily retrieved and printed by category, name, index code, date range, amount range, or any category of information stored in the system.

Timeworks exclusive X-Search,™ X-Sort™ and X-Chart™ features allow you to easily cross-search any of the categories. Or arrange your stored items in increasing or decreasing order, alphabetically, numerically or by date. Break down statistical information by up to ten indexed categories of your choice—and graphically review your results.



Arithmetic calculation of your mathematical data is possible, allowing you to perform Payroll calculation, cost estimates and more. Data Manager 2 also produces the Sum, Average and Standard Deviation of statistical data entered into the system, along with Frequency Charts.

When interfaced together, these programs:

Generate customized data reports, which can be incorporated into any written text produced.

Individually address and print form letters automatically.

Print your name and address file onto standard mailing labels.

Transfer and print text information onto labels and tags.

Calculated numerical data from column to column, giving these programs spread-sheet capabilities.

So, if you can find anything better, simply send us your Word Writer or your Data Manager 2, your paid receipt, and the name of the word writer or data base system you want. If it's available, we'll buy it for you.**

Now at your favorite dealer. Or contact Timeworks, Inc., P.O. Box 321, Deerfield, IL 60015. Phone 312-291-9200.

TIMEWORKS

SOFTWARE WITH SUBSTANCE.

**Now for the small print. Offer applies to Commodore only, with maximum suggested retail prices of $125.00 each for any exchanged program. Offer expires 45 days after date of your purchase.

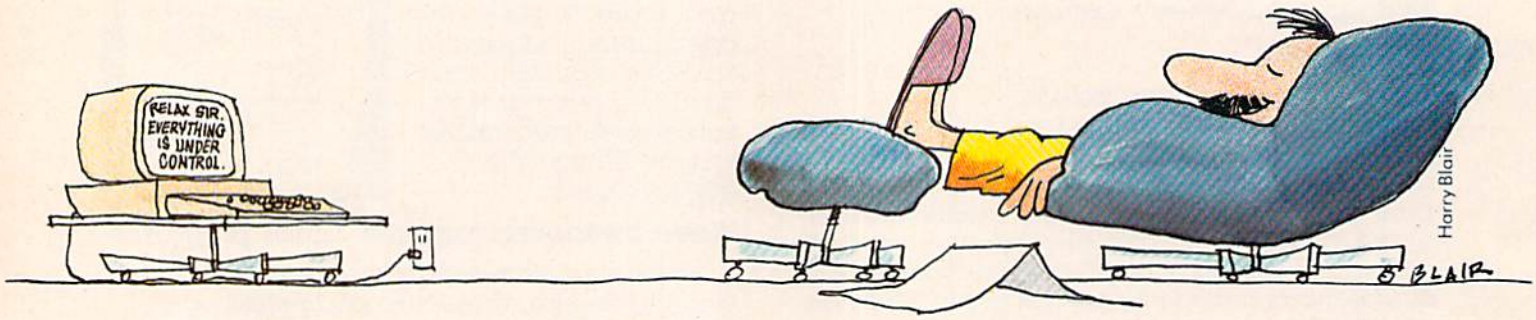
The Electronic Castle:
Managing Your Home With Your Computer

Selby Bateman, Assistant Editor



When friends and relatives begin asking you what practical uses your personal computer has, let your answers start right at home. Software producers, spurred by consumers, are creating a wide array of home applications. And with the advent of such home transaction services as computer banking and shopping, the future looks even brighter.

What do you see when you look at your home computer? A game-playing machine? An educational toy? A learning tool? Sure, your computer is all of these, but it's much more.

As Elliot Dahan says, "My basic premise is that if you don't look at your computer as a home appliance, then don't even buy one. It's as simple as that. When you see the computer as an appliance, then you start looking at what it will do as an appliance."

Dahan is vice president for marketing at Creative Software, a company that has had great success with its line of educational, home management, and computer game programs. His sentiments are echoed by other software producers, many of whom are marketing home management programs which address everything from the family budget to home heating.

In order to better understand the multitude of home-oriented computer applications now on the market, let's divide them into three basic categories.

First, there are the home control programs which allow you to regulate the heating, cooling, and lighting of your house or apartment. Home security packages let your computer become a sentinel against intruders by monitoring doors and windows, setting off alarms, and even automatically calling the police if necessary.

Second, there are household management programs for word processing, family budgeting, checkbook balancing, and a host of other related functions.

The third broad category is home transaction services. With a modem, two-way transactions—at-home banking and shopping, for example—are now possible. These transaction applications are being tested in several major metropolitan markets. If the experiments prove commercially feasible, other transaction service developers are waiting in the wings with similar systems.

Do people really buy home computers for these kinds of home applications? Tricia Parks, a research director for Future Computing, a company

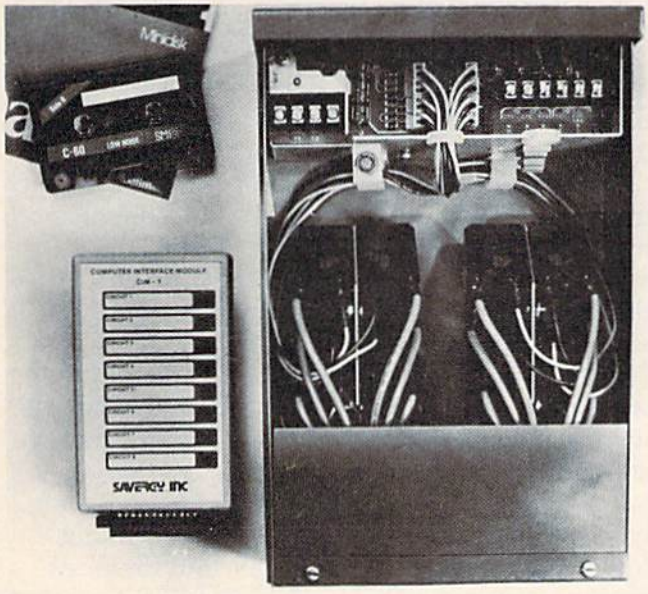
that analyzes trends in the personal computing industry, says her company is in the midst of a major psychographic and demographic analysis of buying patterns among home and business computer users.

"We have found that people generally have a dual motivation when they purchase computers. The first reason is to play games. But that's not the only reason. Otherwise, they would buy a game system for the home, not a computer," notes Parks.

People with children usually buy computers in order to further the education of the youngsters and for home management, she adds. Those without children generally cite self-education and home management as reasons for their computer purchases.

"The home management reason has been lesser in the past, but it is growing," says Parks. "That's reflected in the kind of machines that are coming out, such as the Commodore 64."

Last year, the increasing interest in home control applications came to the attention of Savergy, Inc., a Colorado firm which creates and manufactures equipment and software for energy management applications. In response to customer interest, the company has developed and is now marketing a home energy control device for use with Commodore computers.



Savergy's CIM 112 home-control package includes the computer interface module (lower left), the wall-mount unit (right), and software.

Called the Computer Interface Module 112 (CIM 112), the unit will regulate lights and appliances—turning on and off everything from a sprinkler system to a water heater—when coupled with a computer. The $450 unit can save energy through its scheduling capabilities and through a timing control method called duty cycling. The package includes a computer interface module (about the size of a paperback book) which plugs into the computer, a wall-mounted unit (the size of a thick phone book), and program software on disk or tape. (For more information, contact Savergy, Inc., 1404 Webster Ave., Fort Collins, CO 80524.)

One major drawback to this type of personal computer use immediately becomes apparent when you realize that you can't use your computer if it's tied up sprinkling the lawn, running the thermostat, or monitoring your home's security.

John Helwig of Wescoville, Pennsylvania, has developed a solution to that problem: Purchase a VIC-20 computer, now selling for well under $100, and use it as a machine dedicated to home control. This way, you have your original computer for personal use and a home control machine costing far less than many of the security, lighting, and temperature control systems.

Helwig became interested in a home security system when a neighbor's house was burglarized. He shopped around at commercial firms and found that the costs usually amounted to several thousand dollars. "People would like to have a system, but they just can't afford it. Three thousand dollars is a lot of money."

He has since developed a home control package which he is marketing through his own company, Jance Associates, Inc. It sells for under $200 and can be used with a VIC-20 or Commodore 64. With instructions written for the home computer user, the Jance system includes a computer interface card and all the alarms, switches, and wire necessary to set up the product.

Helwig has added BSR switch modules to his own system so that the security function is just one component of home control. BSR modules connect to the electrical plugs in a home and react to commands from the computer. The system can be used to control the temperature in the hot water heater, to monitor heat pump activity, and to keep tabs on the computer's realtime clock so that Helwig's home thermostat can be raised or lowered at certain times and on designated days. There are dozens of related applications possible for the innovative computer owner, Helwig adds.

"I'm in the process of negotiating with several home construction companies that are interested in building the systems into houses. Every switch would be BSR oriented," he notes. "According to the builders I've talked to, there is a real demand for this. The whole concept of using home computers is expanding. There are all kinds of things that can be done." (For more information, contact Jance Associates, P.O. Box 234, East Texas, PA 18046.)

Closely related to the home control category of computer applications is household management. Balance your checkbook. Chart your monthly electric bills. Use a word processor to handle correspondence.

Think of a household chore that needs to be listed, written, graphed, or analyzed, and you can find computer software that will attempt it. (See "The Data Base As A Home Information Center" elsewhere in this issue.)

Let's say that you have set up a thermostat control package using your computer. To complement that, there are programs which allow you to plot energy usage from month to month and calculate savings from use of insulation, storm doors, weatherstripping, and other energy efficiency improvements. (See COMPUTE! Books' *Home Energy Applications On Your Personal Computer.*) Energy programs are but one example of household management.

One computer executive who has looked carefully at these applications is Vic Schiller, vice president of development for Timeworks, an industry leader in the field of home management software. His company has produced several popular programs, such as *Money Manager, Electronic Checkbook,* and *Data Manager.*

"The theory we promote here is that people will not buy something they don't understand. That's very important to us," he explains.

The success of the company's home management line of software has occurred, he adds, because of adherence to that principle.

"The whole key to this thing is that it is so easy to use. Mom and Dad can use our *Money Manager* when they pick it up without even reading the instructions. I'm such a stickler for user-prompted formats. If I can run software without opening a manual, that's a good piece of software," says Schiller.

Early in 1984, Timeworks began marketing *The Word Writer,* a word processing program which interacts with the other home management packages produced by the company. "It's totally user-prompted, with two keyboard overlays. And there are no commands to memorize," Schiller points out.

Elliot Dahan at Creative Software agrees that home management programs should be easy to use. The company's household finance program has sold over 150,000 copies on cassette for the VIC. And this year Creative Software is selling an integrated series of household management programs called The People's Choice. Included are *Joe's Writer, Fred's Filer,* and *Jack's Calc,* all targeted for the home user who wants to combine easy use with low cost. The programs each cost $49.95 and allow you to integrate mailings with word processing, for example, as a part of their format.

Timeworks, Creative Software, and other software producers continue to improve household management programs, looking for the magical mix of low price and easy use.

Home transaction services, less common than the types of applications we've seen so far, are on the threshold of a breakthrough. With your computer, you should soon be able to make shopping purchases, buy stocks and bonds, deposit and withdraw funds from your bank, conduct personal business, buy theater tickets, and much more. This two-way home computer market is an outgrowth of the burgeoning news, information, and entertainment services you may now be using with your modem. But with the interactions soon to be available, home management by computer enters a new realm.

This may be the year when home transaction services are established in selected large metropolitan markets. Major companies like the Knight-Ridder newspaper chain, the Times Mirror Co. (owners of the *Los Angeles Times*), Field Enterprises (owners of the Chicago *Sun-Times*), and Chemical Bank are closely watching home transaction experiments in Miami, the Chicago area, and other cities, to see if they attract enough subscribers to make mass market systems feasible.

The gamble here is not so much whether the concept will work; it appears to be an idea whose time is overdue. Rather, the anxiety among these companies stems from which mix of services will catch on and at what price.

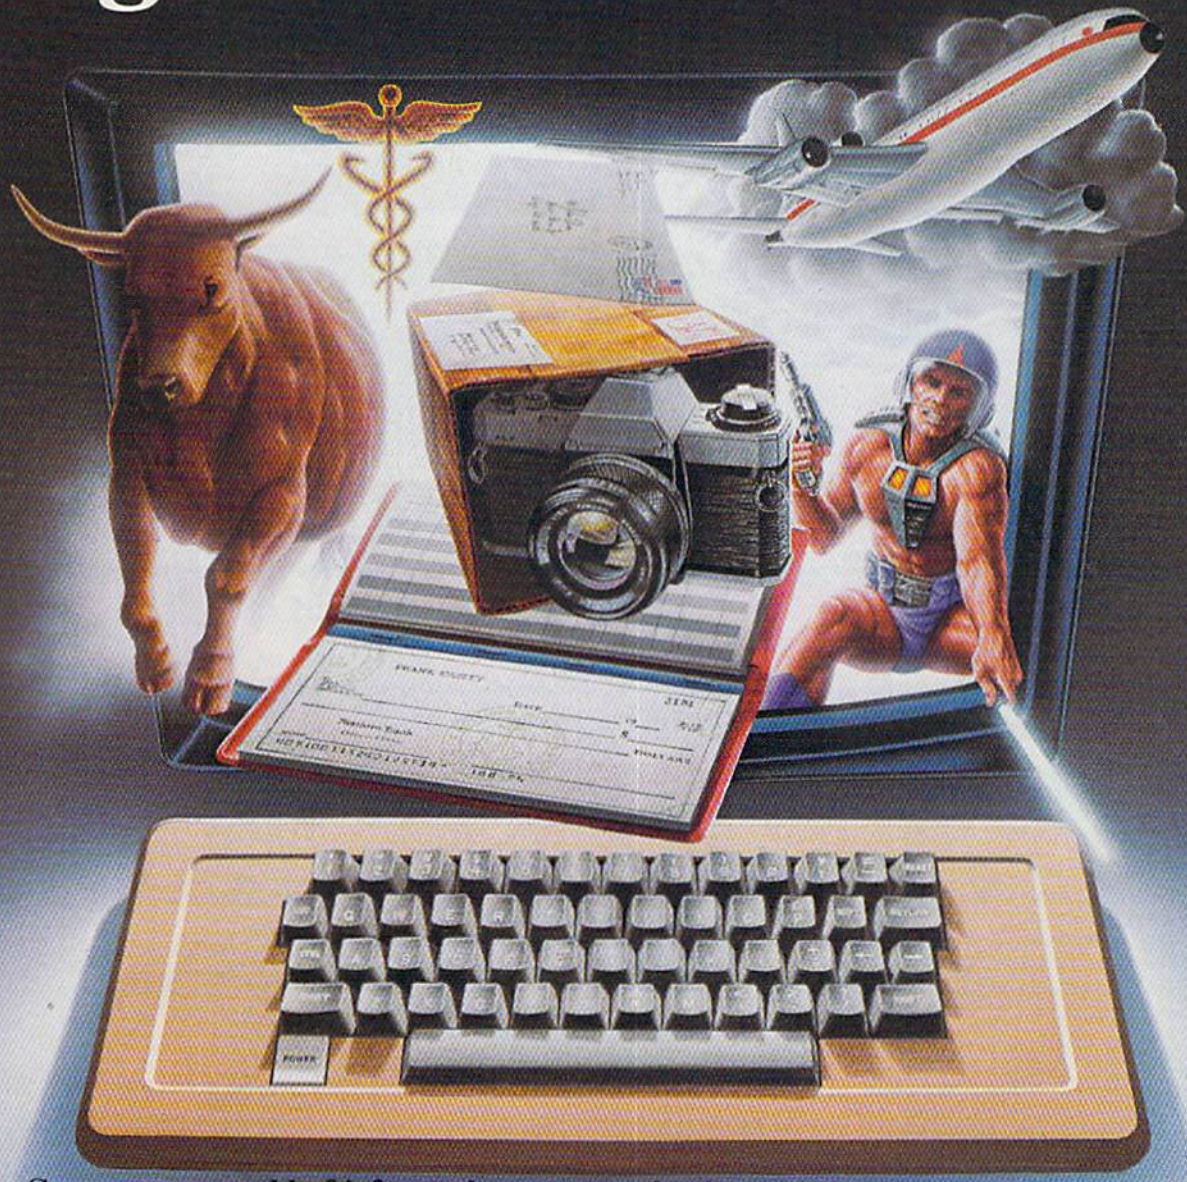
One of the more interesting experiments is the Keyfax Interactive Information Service, scheduled to go on-line this spring in Chicago.

Tom Ray, manager of advertising and public relations for the system's owner, Keycom Electronic Publishing, hopes to have some 20,000 subscribers in the Chicago area by the end of the first year. Keyfax should be accessible by virtually all home computers, says Ray, for a $10–$15 monthly base rate. Not included in that will be a one-time purchase of the necessary software at about $40 or a software-modem package at about $150.

Keyfax will offer a full range of general data base information, shopping services, banking functions, educational packages, and financial options. Ray notes that customers will have access to Ticketron, the national ticket-buying service, and even to an electronic edition of the *World Book Encyclopedia.*

How will these initial mass market experiments in computer transaction services be accepted? "It's hard to guess," says Ray. "We'll see what happens those first couple of years. Quite honestly, I think that everyone is taking guesses."

We don't care which computer you own. We'll help you get the most out of it.



CompuServe puts a world of information, communications, and entertainment at your fingertips.

CompuServe is the easy to use videotex service designed for the personal computer user and managed by the communications professionals who provide business information services to over one fourth of the FORTUNE 500 companies.

Subscribers get a wealth of useful, profitable, or just plain interesting information like national news wires, electronic banking and shop at home services, and sophisticated financial data. Plus, a communications network for electronic mail, a bulletin board for selling, swapping, and personal notices and a multichannel CB simulator.

You get games on CompuServe, too. Classic puzzlers, educational, sports and adventure games and fantastic space games featuring MegaWars, the "ultimate computer conflict."

To learn more about CompuServe, call toll-free, 800-848-8199, for an illustrated guide to the CompuServe Information Service. The videotex service for you, no matter which computer you own.

An H&R Block Company

If experiments like Keyfax in Chicago, Citibank's HomeBase, and Knight-Ridder's Viewtron in Miami do well, plans are already under way to make access available nationally.

Gone are the days when a personal computer owner might feel the need to apologize while fielding well-meant but skeptical inquiries about the machine's practical uses. Whether the application is household control, management, or two-way transactions, the computer owner's home can clearly become an electronic castle.

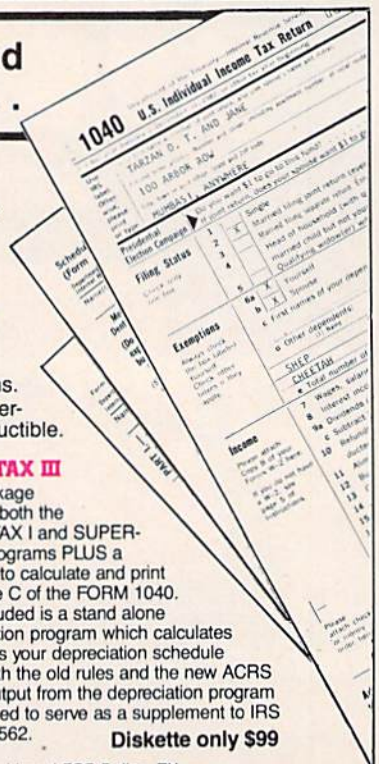
SUPERTAX™ Get Supertax now and relax on April 15th . . .



SECOND SUCCESSFUL YEAR! • THOUSANDS ALREADY IN USE!

Use SUPERTAX personal income tax programs to calculate your tax liability now and have plenty of time to make year-end investment decisions to improve your position. SUPERTAX was specifically created for Commodore 64 users by a practicing CPA with a Master's degree in tax accounting. Highly acclaimed by tax pros, SUPERTAX is easy to understand and a pleasure to work with.

- SUPERTAX PROGRAMS are fully screen-prompted and include a manual loaded with valuable tax information and guidance.
- SUPERTAX instantly recalculates your entire return when you change any item.
- SUPERTAX is available on cassette and diskette.
- SUPERTAX DATA can be stored on cassette and diskette.
- SUPERTAX is available at 50% off to prior purchasers for all subsequent year's programs.
- SUPERTAX is an essential addition to your personal software library—best of all it's tax deductible.

SUPERTAX I

Using either screen or printer output, SUPERTAX I generates clear and concise summaries of Page 1 and 3 and Schedule A of FORM 1040 allowing you to see at a glance and to quickly comprehend your tax situation. This program also prints an OVERALL SUMMARY of the return showing Adjusted Gross Income, Itemized Deductions, Taxable Income, Regular Tax, Income Averaging Tax, Minimum Tax and Payment Due or Refund—all of which are calculated by the program. SUPERTAX I also calculates the moving expense deduction, investment credit, taxable capital gains, political and child care credits, medical limitations, and much more. Input is fast and easy and changes can be made in seconds. This program actually makes tax planning a breeze.

Cassette or Diskette $79

SUPERTAX II

Includes the efficient SUPERTAX I program as well as the more detailed SUPERTAX II program which makes all of the SUPERTAX I calculations, but which also PRINTS THE INCOME TAX RETURN. This program prints page 1, page 2, Schedules A, B, and G (income averaging) of the FORM 1040 as well as FORM 3468 (investment tax credit) on standard government forms or on blank computer paper for use with transparencies. Any input item can be changed in seconds and the entire return is recalculated almost instantly.

Diskette only $89

NOTE: Printing on government forms requires friction feed printer.

SUPERTAX III

This package includes both the SUPERTAX I and SUPERTAX II programs PLUS a program to calculate and print Schedule C of the FORM 1040. Also included is a stand alone depreciation program which calculates and prints your depreciation schedule using both the old rules and the new ACRS rules. Output from the depreciation program is designed to serve as a supplement to IRS FORM 4562.

Diskette only $99

the Complete Personal Accountant™

Whether you're cleaning up at home or around the office, there's NOW a COMPLETE line of money management software that will attend to all the details, while letting you see the whole financial picture. The *Complete Personal Accountant's* exclusive combination of easy to use programs give the wise investor a quick and dependable way to control finances and plan for the future.

FINANCE 1 gets you organized with a standard chart of accounts adaptable to any situation. The Checkbook Maintenance program with *full screen editing* and special 'Help' commands let you find any check by any field. You can flag tax deductibles, reconcile your bank statement, print checks and more.

FINANCE 2 tells you where your money is, where it's going and where it's coming from. The Detail and Summary Budget programs show exactly where you're spending your money. The Income/Expense and Net Worth programs provide professional-looking statements that can be printed with any 80 column printer.

FINANCE 3 separates the CPA from the competition. No other finance package for the home or small business gives you Appointments and Payments Calendars for scheduling your time and money. Few packages offer the ability to chart each account in color. And only the CPA includes a mailing list with a 1200 name capacity*. All reports are printable with an 80 column printer.

FINANCE 4 lets you determine the "what if's" of your financial future. With this easy to learn spreadsheet you'll spend more time making decisions and less time crunching numbers.

FINANCE 5, The Tax Handler™, uses your files from Finance 1, 2 and 4 to complete your taxes in a fraction of the normal time.

The Complete Personal Accountant™ line of money management software is simply the most comprehensive, easy to use financial software available anywhere.

The Data Base As A Home Information Center

Kathy Yakal, Editorial Assistant

Perhaps one of the reasons you bought a home computer was to help you "get organized." You might have a spreadsheet for your financial calculations and a word processing program for correspondence and other writing. But there's another kind of software that can be valuable for many types of home record keeping: a data base program.

I have this friend who, in her early days of computing, was asked to alphabetize and type a list of volunteer groups. It would be simpler, she thought, to perform such a task using a personal computer.

Having become familiar with word processing, knowing that she could just type in all the names and addresses and phone numbers and print them out, she decided that a word processing program would work. Even if she needed to change or add or delete records, she figured she could go back to her file and use the built-in text-editing functions.

But first, she had to alphabetize the 200 pieces of paper containing the group information. Then she remembered that they were supposed to be separated by state before being alphabetized, so she started over again.

After typing in all the information and printing it out, she found a stack of a dozen or so that she had missed. She typed in and printed them out separately and began to cut and paste her original list to fit them in.

About that time, a coworker who had heard of her plight wandered in with a disk in his hand. "This is a data base program that you can use for your list," he said.

"I'm already finished with it," she replied, pointing to her rather unsightly stack of work.

"Oh, I see you used a word processing program for it," he said, trying unsuccessfully to hide a grin. "Well, why don't you take a look at this program. Maybe it will make your job easier next time."

She did. And it did.

The Same Thing, But Smaller

A data base is exactly what its name implies. It is a base, or storehouse, for your data. You create and maintain your data base by using software specifically designed to let you enter, store, and retrieve data in a format that you designate.

Large systems, mini- and mainframe computers, have used data bases for years. Many businesses store data base files in their central computers. Employees may then have access to that information through their own individual terminals.

Data base software for Commodore computers, though perhaps not as sophisticated as

If you want to stay ahead of the personal computing revolution ...

...welcome to *COMPUTE!'s PC & PCjr!*

This exciting new magazine from *COMPUTE!* takes you inside the PC and the incredible new PCjr to bring you inside information you'll find nowhere else.

You'll discover how to get the most computer power for your money. At home. At school. At work. With easy-to-run programs. Challenging projects for advanced users. Brand new sound and graphics applications. Plus some of the most exciting computer functions outside of the top-secret research labs!

We'll help you decide what to buy. With independent evaluations of hardware, software and peripherals. Comprehensive reviews of new products as they're introduced. Hard-nosed evaluations of each machine's strengths and weaknesses.

COMPUTE!'s PC & PCjr will keep you on the leading edge of personal computing like no other publication can. Here are some of the features you can look forward to:

Welcome to the PCjr! A complete introduction to IBM's newest personal computer, and a fascinating peek at the 8088 microprocessor – the tiny-but-talented brain of the PCjr.

Designing PCjr — The Inside Story. PCjr's creators tell how they designed the new computer – from original planning to trade-offs to ultimate success.

Telecomputing with Your IBM. How to link up with distant computers over ordinary phone lines, access information services, even do office work at home with your own machine!

Music and Graphics. How to play songs and create sound effects with your PC or PCjr. Programs to generate impressive hi-res graphics and computer animation.

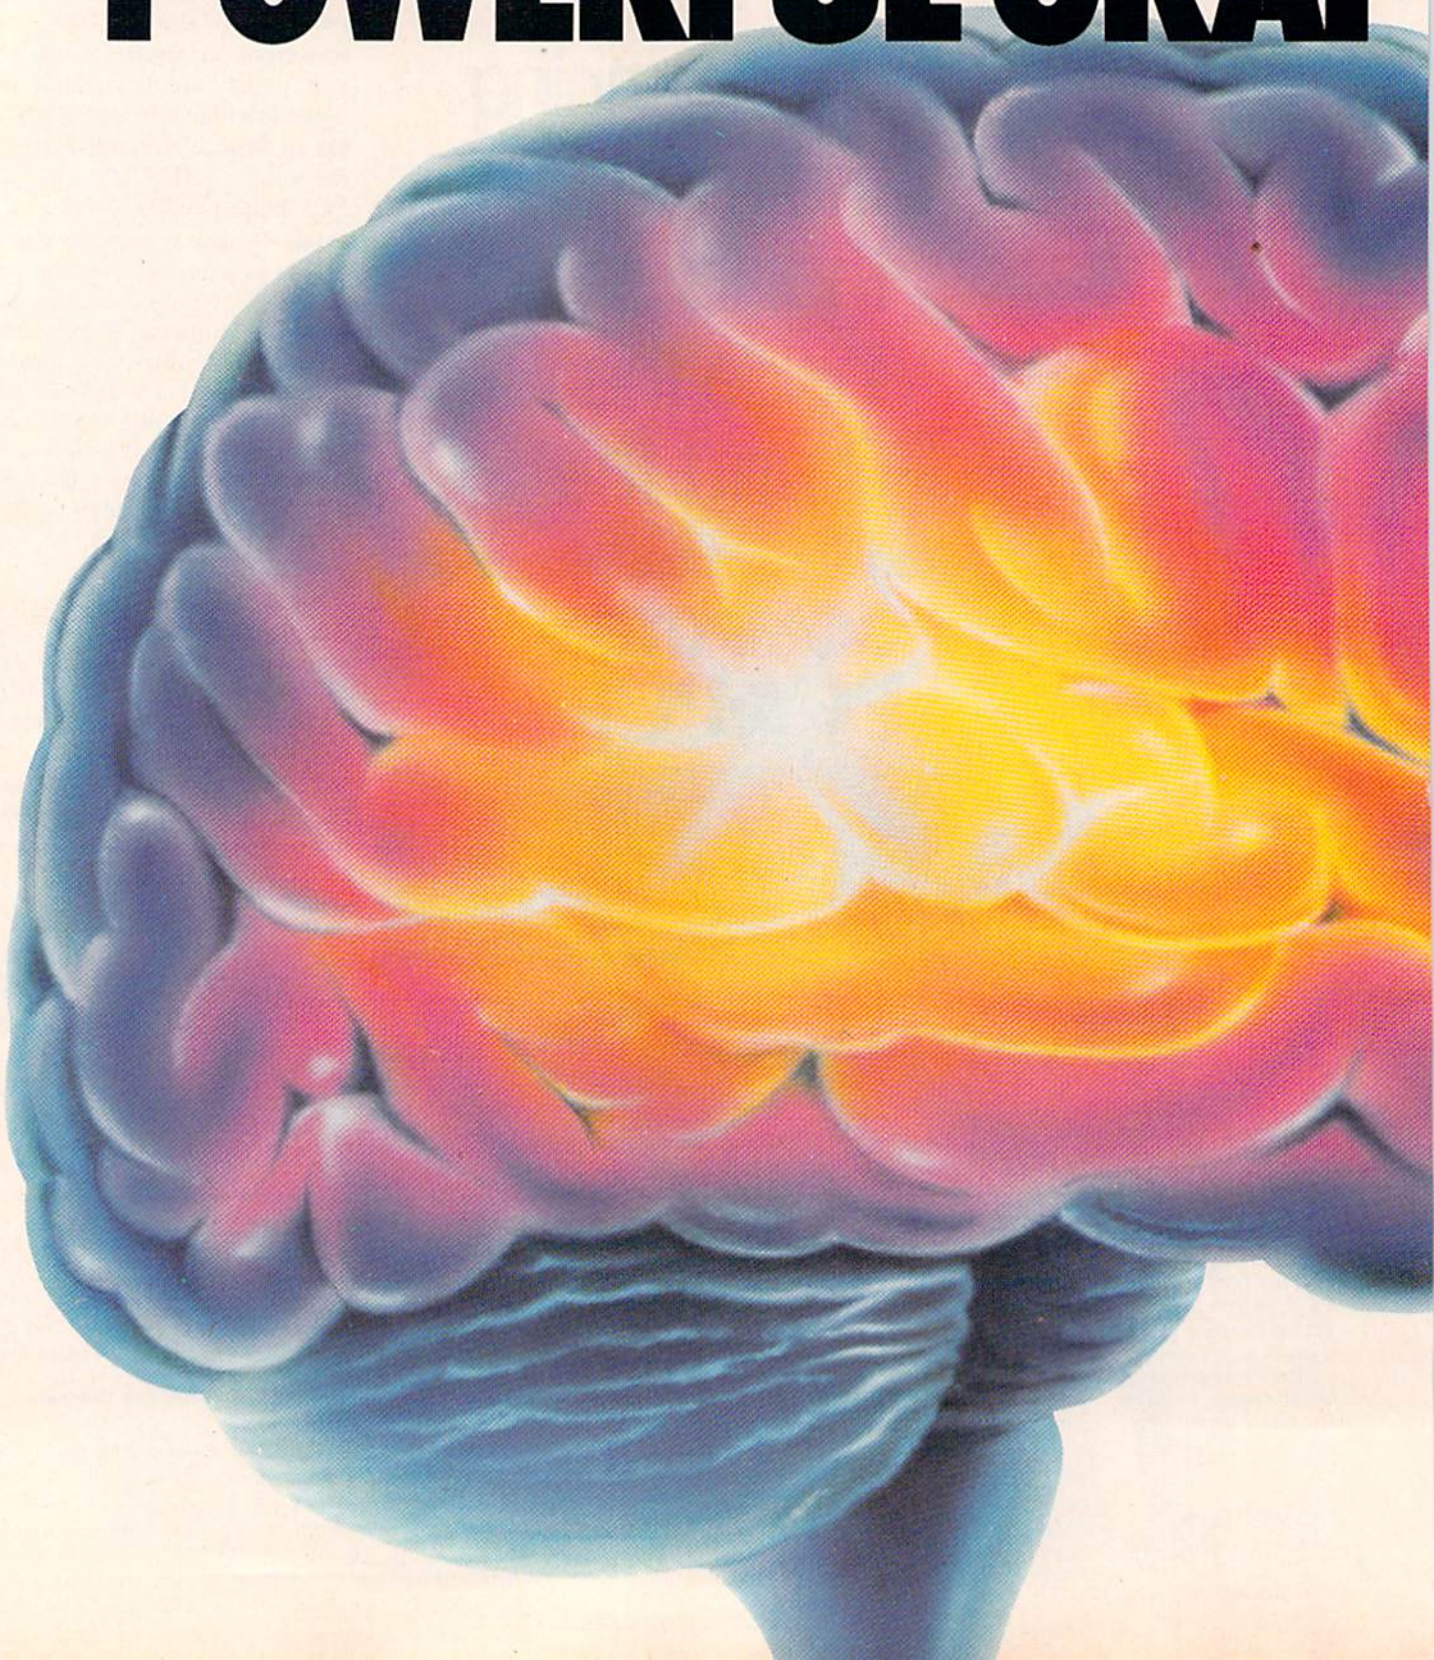
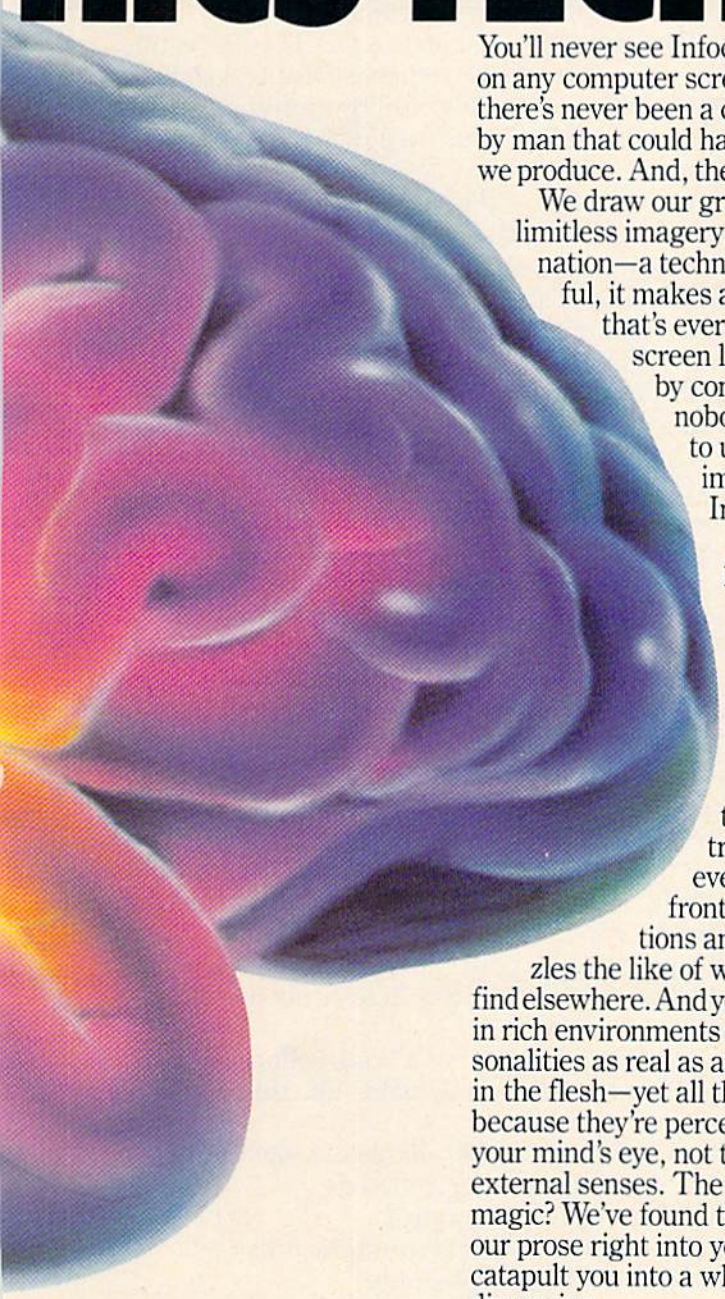
WE UNLEASH TH
POWERFUL GRAP



E WORLD'S MOST HICS TECHNOLOGY.



You'll never see Infocom's graphics on any computer screen. Because there's never been a computer built by man that could handle the images we produce. And, there never will be.

We draw our graphics from the limitless imagery of your imagination—a technology so powerful, it makes any picture that's ever come out of a screen look like graffiti by comparison. And nobody knows how to unleash your imagination like Infocom.

Through our prose, your imagination makes you part of our stories, in control of what you do and where you go—yet unable to predict or control the course of events. You're confronted with situations and logical puzzles the like of which you won't find elsewhere. And you're immersed in rich environments alive with personalities as real as any you'll meet in the flesh—yet all the more vivid because they're perceived directly by your mind's eye, not through your external senses. The method to this magic? We've found the way to plug our prose right into your psyche, and catapult you into a whole new dimension.

Take some tough critics' words about our words. SOFTALK, for example, called ZORK® III's prose "far more graphic than any depiction yet achieved by an adventure with graphics." And the NEW YORK TIMES saw fit to print that our DEADLINE™ is "an amazing feat of programming." Even a journal as video-oriented as ELECTRONIC GAMES found Infocom prose to be such an eye-opener, they named one of our games their Best Adventure of 1983.

Better still, bring an Infocom game home with you. Discover firsthand why thousands upon thousands of discriminating game players keep turning everything we write into instantaneous bestsellers.

Step up to Infocom. All words. No graffiti. The secret reaches of your mind are beckoning. A whole new dimension is in there waiting for you.

(For more information on Infocom games contact: Infocom, Inc., P.O. Box 855, Garden City, NY 11530.)

INFOCOM™

The next dimension.

For your: Apple II, Atari, Commodore 64, CP/M 8," DEC Rainbow, DEC RT-11, IBM, MS-DOS 2.0, NEC APC, NEC PC-8000, Osborne, TI Professional, TI 99/4A, TRS-80 Model I, TRS-80 Model III.

systems used by larger computers, consists of the same basic components. A bank's computer may have millions of words and figures to keep straight, while your VIC-20 has only to organize a 75-name Christmas list, but they can both use data base programs to do it.

Getting The News By Data Base

Let's say it's 8:00 and your morning newspaper hasn't yet arrived. If your local newspaper's circulation records are stored in a computerized data base, and the computer happens to be working at the moment that you call, the conversation might go like this:

> Phone Clerk: "Circulation department. This is Dan Sullivan speaking."
>
> You: "8:00. No paper."
>
> Clerk: "I'm sorry. May I have your phone number, please?"
>
> You: "Why do you need my phone number? My paper is supposed to be delivered to my front porch, not my telephone."
>
> Clerk: "We access your records through your phone number, not your address. If you'll give me your phone number, I'll get your record up on the screen and see what route you're on. Then I can check to see if there's a problem with that route."

The record that the phone clerk needs to access is a small part of a file, which is a small part of a large data base, and probably contains a lot of information that can help him track down your newspaper. It will list your name, address, and telephone number. It will identify what route you are on, and maybe even give the name and phone number of the newspaper carrier. It will, of course, show the clerk whether or not you actually subscribe to the morning newspaper. And, unless billing records are kept on a separate data base that the circulation department cannot access, it may show when you paid your last bill.

Of course, the phone clerk can't use the data base to deliver your newspaper. But it allows him to get enough information quickly so he can solve the problem and get you your newspaper.

Starting Out

When you first subscribed to the newspaper, you gave information about yourself that had to be entered into the circulation department's data base. But before that, when the department's records were being transferred to a computer, someone had to decide what information this new filing system needed to contain.

Just as businesses must define their needs for information storage, you will need to do the same thing when you use a data base on your home computer.

Any data base software that you buy should include documentation, instructions explaining how to use it. The documentation might be long and complicated, but it's important to read through and understand it before you get started.

Though commands and capabilities vary from one program to another, all data base programs consist of the same basic elements.

The first step is to create a *file*. This file is not to be confused with the data base itself. A data base can hold many files, and the software should allow you to define your own files based on what you need.

You may be used to thinking of a file as a little manila folder that goes in a drawer. It means the same thing in terms of a data base. Instead of typing a label to put at the top of a file folder, you type the name of the file into the computer.

Let's say you bought a data base program to catalog your books. We'll call the file "Book Collection."

This file contains a number of *records*, one for each book. Though the actual content of each record differs, the type of information is the same.

Each record consists of several *fields*. This is the real meat of your file, for these are the lines in which the individual information for each record is stored. You are asked to give each field a name, and also decide on the maximum number of characters and numbers each field can hold. Further, you'll need to decide whether that field can hold letters only (alpha), numbers only (numeric), or both.

It is extremely important to define your fields carefully. If you don't allow enough room for the information you need to enter, you'll have to go back and redefine your file. And if you allow for more information than you'll ever need, you'll be wasting memory.

Using the example of a book collection, you might want to name your fields like this:

1. NAME OF BOOK (50 characters maximum; both alpha and numeric allowed)
2. AUTHOR (35; alpha only)
3. COPYRIGHT DATE (4; numeric only)
4. PUBLISHER (35; alpha only)
5. PUBLISHER'S ADDRESS (30; both)
6. CITY, STATE, ZIP (40; both)
7. SUBJECT OF BOOK (25; both)

Once you've defined and saved a format like this, you can call up that format to add, change, or delete records. Data base programs vary in procedures for saving an updated file. Some save

Tax Pack™

I designed Taxpack so you could do something really practical with your Commodore VIC 20.

Peter Lambert, MBA
Vice-President,
Product Development
Cosmopolitan Software

Taxpack
Powerful income tax computing software specially designed for the Commodore VIC 20.

Now you can use your Commodore VIC 20 to perform all the calculations on your Canadian T1 general tax form. *Taxpack* guides you easily through every aspect of the form with friendly prompts and a comprehensive instruction manual. This new software is available on cassette tape and will run on the standard 3.5k memory in your Commodore VIC 20 home computer.*

Taxpack lets you tackle your income tax form at your own pace. A convenient save-and-restore function lets you record and review historical results. Professional editing features assure easy and accurate data entry. *Taxpack* puts the power of tax modelling and planning for subsequent years in your hands, today.

**The cassette also includes an expanded version of Taxpack with enhanced display features, for the Commodore VIC 20's with 8k+ memory expansion.*

Many happy returns
Because you can calculate and preview more tax scenarios with *Taxpack* than you'd have the patience or the time to do manually, this software can help you save tax dollars. Custom-tailored to the Canadian T1 general form, *Taxpack* will be updated every year to reflect changes in the government's income tax regulations. Innovative program design allows us to update *Taxpack* within days of the new T1's availability.

So easy to order
To use your *Visa* or *Mastercard*, phone us toll free; or, send your cheque or money order with the handy mail-order form attached. We'll confirm your order by return mail. Your up-to-date *Taxpack* cassette and manual will be shipped within 15 days of the release of the 1983 T1 general form.

To order with Visa or Mastercard call us toll-free:

1-800-268-6364
(from B.C., call 112-800-268-6364)

Satisfaction Guaranteed
We guarantee that you will find *Taxpack* an excellent software value. If you are not totally satisfied, drop us a note to say why, and return the product post paid to us within 10 days for a full refund of the purchase price.

each record as it is entered, while others require you to enter a SAVE command every few records.

All Sorts Of Sorts

Beyond storing information in a user-defined format, a data base program can not only retrieve it, but retrieve it in a certain order. Or retrieve only certain records and put them in order. Each program has its own variety of ways to sort and organize information.

In order to do that, you must define the criteria by which you want to sort. You need to specify some of your fields as *key fields*. In our imaginary phone call to the newspaper, the phone clerk knew that the customer's phone number was a key field, that he could access the whole record by typing in the phone number and letting the program match it to your subscriber record.

In your book collection file, suppose you define fields 2, 3, and 7 as key fields. You would be able to find out how many books you have by a given author or publisher, and which books you have on a certain subject.

Or, if you are planning to visit a city and want to look for a job with a book publisher, you could set up a separate field for CITY, do a sort, and come up with names and addresses of book publishers in that city. Deciding which fields to designate as key fields will depend on how you will later want to sort them.

A Few Warnings

Before you create a file, be sure to note the storage capacity of your data base program. Most commercial programs available for Commodore computers have adequate space for home data storage, but it's a good idea to plan ahead for future file expansion.

Reading the documentation carefully may save you a lot of headaches later on. Anyone who defines a file and discovers a major flaw in its design 30 records later learns that lesson in a hurry. Some programs allow you to go back and redefine a record's fields, but you can't count on that unless you read the documentation.

Most programs are particular about punctuation, and will not allow you to use certain marks, or any punctuation marks at all, in some fields. Be sure you are aware of any punctuation quirks your program may have.

If you plan to alphabetize, beware of such things as state abbreviations. Whenever you specify a key field, you will at some point be asked for the depth of sort, how many characters into the line you want the program to sort. If you want to sort a file by state, then alphabetize, you could run into a couple of problems.

You would probably set the depth of sort at two. This would seem to suffice for state abbreviations. But take Maryland (MD) and Massachusetts (MA), for example. If it sorts by those abbreviations, they would be in the wrong order when you spell out the state's name. In addition, if you have records from places outside the United States, Canada will come between California and Florida, and Mexico will show up in the middle of the M's. You need to think through the kinds of sorts you'll want to do before defining files.

If you plan to print specialized reports from your compiled and sorted data, you will find that many programs let you designate which section of the file, even which fields in each record, should be printed. However, some programs print line and record numbers along with the data. Be sure to consult the documentation if you need to print a polished report with no extraneous information.

Some Home Applications

Perhaps you can't think of any uses for a data base in your home. Or maybe you bought a data base program for a specific purpose and are wondering how else you could use it. Here are some suggestions.

- Cataloging personal belongings. You can use a data base to keep track of records, books, tapes, software, and other items you have amassed. If you have a hobby like stamp collecting, you may find that the program's sort capabilities enable you to catalog your collection more fully.
- Recording gifts and cards for special occasions. Giving and receiving gifts and cards for weddings, birthdays, Christmas, and other holidays can create some organizational problems. A data base may be helpful.
- Keeping track of subscription expiration dates. If you subscribe to several magazines, newspapers, or other periodicals, you might want to use a data base to remind you when each is coming up for renewal.
- Computerize your address book. If you have to buy a new address book every other month because you keep scratching out and adding names and addresses, a data base could provide a simpler way to track down mobile friends and relatives.
- Making bibliographies for work- or school-related projects. If you're preparing a major report, a data base might be a better way of organizing sources than a stack of file cards.

A data base will not organize your life for you. That still takes some time and effort on your part. But if you have a personal computer, and are looking for ways to make it a practical part of your home life, you might find a data base a very useful tool.

YOUR 3 BEST REASONS TO OWN A COMMODORE 64™

The best word processing program of its kind

PaperClip* is the program that makes word processing so simple you'll never use a typewriter again. Advanced features you might only expect on a much more expensive system, yet so easy to use even a novice can get professional results.

The easy file management system with awesome capabilities

Delphi's Oracle* is like a computerized filing cabinet with a brain. Organize your files any way you want. Then search, sort and analyse your information with effortless speed. So versatile, its power will amaze you.

The interface to end all interfaces

BusCard* is a magic box that lets you add disk drives, hard disk, virtually any printer, and a whole range of other peripherals without any costly additional equipment. Gives you extended BASIC, and other impressive capabilities your 64 could never handle before!

BATTERIES INCLUDED

*PaperClip, Delphi's Oracle and BusCard have been developed specifically for Commodore computers by Batteries Included. For a full-color brochure on all 3 of these packages, write to Batteries Included, 186 Queen St. W., Toronto, Ontario, Canada M5V 1Z1, or call (416) 596-1405.

Commodore 64 is a Trademark of Commodore Business Machines.

Dieter Demmer
The Programmer Behind *Delphi's Oracle*

Kathy Yakal, Editorial Assistant

Your home computer with a disk drive or cassette recorder can store a great deal of information. But if you want to use your computer for record keeping, that information needs to be easily entered and retrieved, and probably in some sort of logical order. Data bases meet that need. Here's a look at one of the most popular data bases for Commodore computers, *Delphi's Oracle*, and the man who designed it, Dieter Demmer.

In explaining what a data base is, people often compare it to a box containing index cards. Let's say you use such a filing system to keep track of addresses. The box itself is the *file*. Each card is a *record* of information about one person. Every record consists of several entries, or *fields*, like name, street address, city, state, and telephone number. To be useful, a file like this would need to be in some kind of order, probably alphabetical, and require periodic revision.

A data base is set up the same way. Basically, it is a program that allows you to set up a filing system, enter data, then order and revise those files. Some data bases are designed for specific purposes, like mailing lists; others let you define your own files.

Delphi's Oracle is an example of the latter. Published by a Canadian software company, Batteries Included, it's a powerful data base with a storage capacity limited only by hardware. "Using a Commodore 64 and a 1541 disk drive, you could fill an entire disk with records and still have room," says program designer Dieter Demmer.

A Technical Background

Programming and modifying *Delphi's Oracle* took almost a year, but Demmer's many years of technical experience paid off. Born in Cologne, Germany, he received a Bachelor of Science degree from the University of Cologne and began a 15-year stint with Litton Industries in research and development. He spent another three years with Control Data in Minneapolis as a program analyst, then returned to Litton as a field service representative.

"I pretty much taught myself how to use computers," says Demmer. "I started learning

back in the late sixties on the big vacuum tube computers."

Tired of all the travel involved in his job at Litton, Demmer started exploring other possibilities. He had purchased an 8K Commodore PET several years before and started programming. It wasn't his first experience with home computers, though. In 1968, he built his own 16-bit microcomputer with 32K of memory. "It never did have much of an operating system," says Demmer. "It's kind of a joke now, with all of the modern languages available. I still use it as a terminal, though."

Saving Time And Space

Demmer left Litton and joined Batteries Included in 1982. *Delphi's Oracle* was his first project. It runs on all Commodore equipment, though it was designed on the 8000 series.

"Information storage on the *Oracle* is limited by the disk drive," says Demmer. "The 1541 disk system was never meant to handle relative files. You have to coax it into doing it."

Once files are entered into a data base, the computer must perform "housekeeping" functions. Every bit of available space must be used, so the data must be constantly sorted and resorted. And it can be very irritating if your record entry is interrupted by those functions.

The main menu in Delphi's Oracle *provides easy access to the main program sections which allow you to create and update data base records and files.*

"There are two ways to do the sorting," says Demmer. "Since it takes a considerable amount of time, I programmed the *Oracle* to sort after the user has finished updating. So there are no more time delays after you've entered 6000 records than there are after you've entered three."

Not For The Novice

Good, clear documentation is essential to using a data base successfully. Without it, even the most experienced computer user may waste hours recreating files or, worse yet, lose them.

The instructions accompanying *Delphi's Oracle* run more than 200 pages. Demmer was closely involved in preparing this document, and says it is easy to understand, but takes time. "The *Oracle* is rather complex for the novice user," he says.

But, he continues, there are many home applications for which his data base is well suited, like personal property inventory, keeping track of investments, and correspondence lists.

The *Oracle*'s output files are compatible with *PaperClip*, a word processing package that is also published by Batteries Included. "In conjunction with a word processor, the *Oracle* becomes a very powerful package," says Demmer. "It could be used very well by someone with a small business."

More On The Way

Demmer believes that part of the reason for the *Oracle*'s initial success was its early arrival in the home applications software market. "There just wasn't anything else available," he says. "We don't expect it to stay that way, though."

Besides updating his first versions and translating them for use on other home computers, Demmer has been working on "mini-data bases": programs designed for one specific kind of record keeping.

Jump on 10 monsters, 64 screens and $10,000 with Pogo Joe.™

A Mutated Wonderwhisk whisks by. The Spinning Top almost topples him!

Close. But Pogo Joe bounces back. Bouncing from cylinder to cylinder, screen to screen, Pogo Joe racks up point after point.

You guide him from cylinder to cylinder, changing the color on top of each. Change the top of each cylinder on a screen, then you're on to the next.

The more screens you complete, the nastier the monsters you face, and the faster they attack.

Press the fire button! Jump two cylinders to safety. Hop into a transport tube, and then whoosh! Pogo Joe appears across the screen. Jump on an escaping monster. Blam! It's gone in a flash! Only to reappear out of thin air.

Keep bouncing Joe to original music on realistic 3-dimensional cylinders. All the characters in this rollicking game are also 3-dimensional and fully animated. The graphics almost jump off the screen, leaving the arcades behind.

What's ahead with *Pogo Joe*™ is $10,000. Simply tell us what magic word appears after *Pogo Joe's* tenth screen. If your name is drawn from among the correct answers you'll win $10,000!

No purchase is necessary. You'll find entry forms at any store that sells Screenplay™ games.

But if you don't win you can't lose. *Pogo Joe*™ is so much fun you'll jump for joy no matter what.

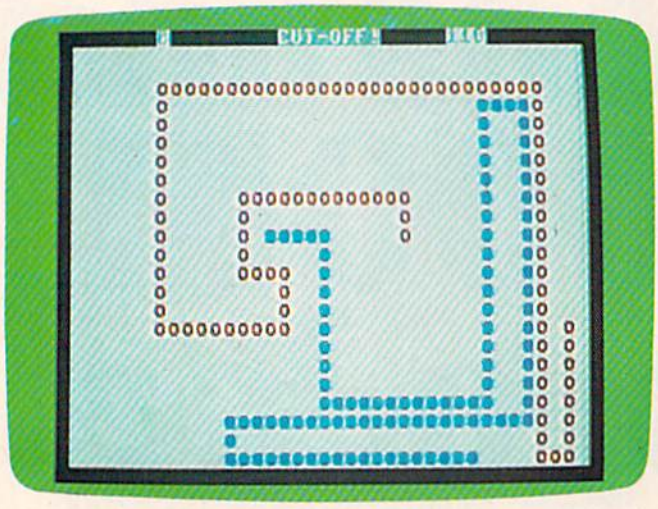
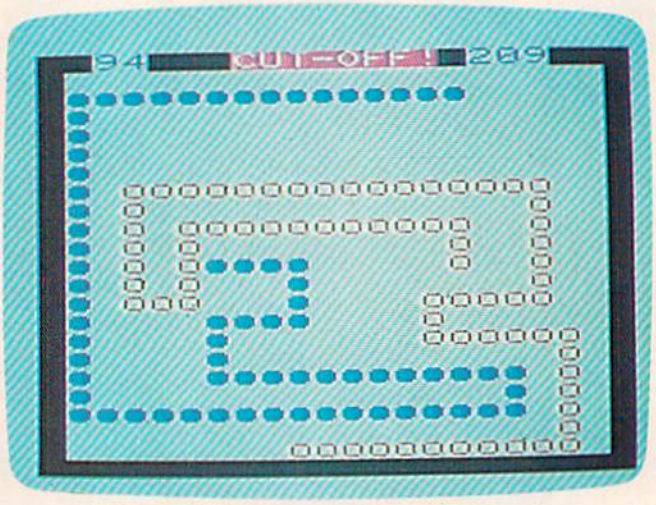
CUT-OFF!

All-Machine-Language Game For Commodore 64 And VIC-20



In the 64 version, some tricky maneuvering has the blue player nearly cut off.



The red player is almost trapped at the bottom, but may be able to escape (VIC version).

Tom R. Halfhill, Editor
COMPUTE!'s PC & PCjr Magazine

"CUT-OFF!" is a fast-paced two-player game for the Commodore 64 and unexpanded VIC-20. Programmed entirely in machine language, it has ten levels of difficulty—ranging in speed from moderately slow to impossibly fast. The VIC version requires one joystick and the 64 version requires two. Users of expanded VICs should unplug or switch off their memory expanders before typing in or running the game.

Some computer games over the years have become classics. Usually they are simple in concept, yet universal in appeal, and general enough to be translated for almost any computer. Some examples are *Pong*, the granddaddy of all videogames, *Breakout*, *Lunar Lander*, and the venerable *Space Invaders*. For legal reasons they may be disguised by different names, but there probably isn't a home computer or videogame machine anywhere for which some version of these all-time favorites isn't available.

Another classic game is *Blockade*. Again, it goes by different names (sometimes *Surround*), but the basic concept remains the same: Two players square off against each other by steering a moving line around the screen, trying to head off the other player or force him to crash into a wall or his own trail. This concept dates back to the early days of videogames. In fact, the very first videogame I ever played was a *Blockade*-style game. It was during the mid-1970s, and a friend and I encountered the machine in a dimly lit cafe. By today's standards the game was downright primitive. No color, crude sound effects, and slow action. Yet we had never played anything like it before. (We thought it would never catch on, because it cost 25 cents per play at a time when a quarter bought you three plays on most pinball machines.)

Years later, the basic concept of *Blockade* was revived and updated in the 1982 film *TRON*. In this Walt Disney production, humans trapped inside a bizarre computer world were forced to become gladiators on "light cycles"—space-age motorcycles which left walls in their wakes, counterparts of the lengthening trails in *Blockade*.

Anyway, that's the story behind the latest incarnation of this popular game, now dubbed "CUT-OFF!" It preserves all the traditional concepts and includes color, sound, and the broad range of speed levels possible only in a program written entirely in machine language.

Tough competition.

The world may be short of oil. And short of jobs. But there's no shortage of entertainment. Arcades. Movies. Amusement parks. TV. Concerts. Records. You've got your choice. And every day, more of you are choosing HesWare™ computer games.

That's because only the best games earn the HesWare title. Tough, challenging, arcade quality action games like Gridrunner,™ Predator,™ Retro Ball,™ and Robot Panic.™

Mind-bending strategy and role playing adventures like Pharaoh's Curse™ and Oubliette.™

Zany new titles that have to be seen to be believed. Would you believe Attack of the Mutant Camels™??

You don't need an expensive computer to enjoy HesWare action, either. HesWare programs are available on cartridge, diskette or cassette for VIC 20,™ Commodore 64,™ Atari® and IBM® personal computers.

When you pick up a HesWare game, you know it's ready for the toughest test of all: beating out the tough competition for your attention.

HesWare games. Just one of the ways HesWare is expanding the computer experience. Look for them at your favorite software retailer.

VIC 20 and Commodore 64 are trademarks of Commodore Electronics Ltd. Atari is a registered trademark of Atari, Inc. IBM PC is a registered trademark of International Business Machines. Pharaoh's Curse is a trademark of Synapse Software. Oubliette is a trademark of ISA Software.

Pleases the tough customer.

Notes On VIC Tiny MLX

Charles Brannon, Program Editor

There's just enough room in a 5K (unexpanded) VIC to hold MLX. Unfortunately, there isn't room for anything else, such as the machine language program you need to type in. It might seem you need to use a memory expander. This would be unfortunate, though, because the machine language for the VIC version of "CUT-OFF!" will fit in an unexpanded VIC.

Rather than leaving out some readers, we decided to see if MLX could be shortened enough to hold both the MLX machine language editor and the machine language for CUT-OFF! The only way to do this is to remove parts of MLX. This means you have fewer commands at your disposal than in the complete VIC MLX program.

Specifically, these things were cut out to save memory:

- the MLX logo
- the INPUT statements for starting and ending address, and their appropriate error checks. Instead, the values you would normally use are just assumed in line 210.
- the New Address command. This means that you have to type in CUT-OFF! all in one sitting, since there is no way to change the address your typing is POKEd into. Correspondingly, you cannot SAVE your program until you've finished typing, and there is no way to LOAD in a previously typed version of CUT-OFF!
- the Display command
- as mentioned, the Load command

What does that leave you? Well, you can still flawlessly enter the program on an unexpanded VIC. All the error checking with checksums remains, as well as a tape or disk Save when you finish your typing. Although this is a big trade-off, at least you don't need an additional memory expander to type in and play CUT-OFF!

Typing CUT-OFF!

Pure machine language programs are usually more difficult to enter than BASIC programs because they consist of seemingly endless streams of numbers. To make typing CUT-OFF! easier, we've listed the programs in MLX format.

You may already be familiar with MLX if you've typed in some of the machine language programs published in earlier issues. If you're not familiar with MLX, it's a utility designed by Program Editor Charles Brannon to make typing errors almost impossible. To learn how to use MLX, see the article describing it elsewhere in this issue. Commodore 64 users who have previously typed in MLX can use it again for CUT-OFF! VIC users, however, must use a new version of MLX adapted especially for CUT-OFF! This stripped-down version of MLX (dubbed "Tiny MLX") allows you to enter the game on an unexpanded VIC, something not possible with the full-length MLX. (See accompanying article, "Notes On VIC Tiny MLX.")

Here's the information you'll need to enter CUT-OFF!:

Commodore 64 CUT-OFF!
Starting address—49152
Ending address—50663
To run, enter SYS 49152
To stop, press RUN/STOP—RESTORE

VIC-20 CUT-OFF!
(The starting and ending addresses are "built into" Tiny MLX.)
Starting address—6063
Ending address—7658
To run, enter SYS 6063
To stop, press RUN/STOP—RESTORE

Remember, to load a machine language program from disk or tape, you must use this special form of the LOAD command:

```
LOAD"filename",8,1   (for disk)
LOAD"filename",1,1   (for tape)
```

If you forget to append the ,1 to the command, the program loads into the wrong area of memory and will not work.

Starting The Game

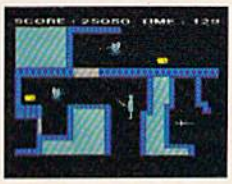
After you enter the proper SYS command, the game screen appears instantly. (One of the best things about machine language is that you don't have to wait around for programs to initialize.)

The opening screen allows you to select a skill level ranging from 0 (the slowest speed, suitable for youngsters) to 9 (recommended for superhumans only). The skill levels are spaced equally apart, so you might want to start at 3 or 4. The level you select remains the same for the entire game. To change levels in the middle of a game, press RUN/STOP—RESTORE and restart the program with the SYS command. (Of course, this cancels the game in progress.)

To choose a skill level, move the joystick up or down (joystick 1 on the 64 version). You'll see the number on the screen change and "wrap around" if you go below 0 or above 9. To lock in your choice and begin the game, press the fire button (joystick 1 on the 64 version).

The game starts with the players aimed at

WELCOME TO APSHAI. YOU'RE JUST IN TIME FOR LUNCH.



Boy, have you taken a wrong turn. One moment you're gathering treasure and the next you're being eyed like a side of beef.

You're in the Gateway to Apshai.™ The new cartridge version of the Computer Game of the Year,* Temple of Apshai.™

Gateway has eight levels. And over 400 dark, nasty chambers to explore. And because it's joystick controlled, you'll have to move faster than ever.

But first you'll have to consider your strategy. Is it treasure you're after? Or glory? You'll live longer if you're greedy, but slaying monsters racks up a higher score.

The Apshai series is the standard by which all other adventure games are judged. And novices will not survive.

They'll be eaten.

One player; Temple of Apshai, disk/cassette; Gateway to Apshai, cartridge, joystick control.

ACADEMY SOFTWARE

P.O. Box 6277, San Rafael, CA 94903 (415) 499-0850

Programmers: Write to our New Program Manager concerning any exceptional VIC 20™ or Commodore 64™ game or other program you have developed.

each other head-on. With the 64 version, joysticks 1 and 2 control the left and right players, respectively. To steer, move the joystick up, down, right, or left. Diagonal motion is not allowed.

Since the VIC has only one joystick port, the right-hand player must use the keyboard for control. Don't assume that this compromise necessarily puts the keyboard player at a disadvantage. With a little practice, some people seem to adapt to the keyboard and gain more control than the person with the joystick. This is due partly to the arrangement of the control keys, an arrangement sometimes seen in Apple games:

(up)
I
(left) J K L (right)
(down)

Notice how this differs from the usual I-J-K-M diamond pattern. Although the diamond seems the most logical way to go for four-way movement, in practice it's clumsy compared to this I-J-K-L arrangement. Try it. Rest your right index finger on the J key, your fourth finger on the L key, and then move your middle finger up and down on the I and K keys to control vertical movement. You may want to adopt this pattern for your next keyboard-controlled game.

The joystick buttons toggle a pause feature. To freeze the action, quickly press and release the button (either joystick button works with the 64 version). This leaves you free to answer the phone or do other things. To restart the action, press and release the button again. (The keyboard player in the VIC version cannot activate this feature.)

Scoring And Winning

There are four ways you can crash: hitting a wall, running into the other player's trail, crossing your own trail, or backing into yourself by trying to reverse your direction.

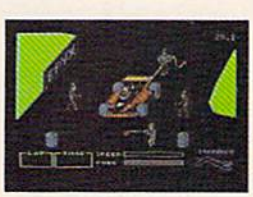
After a crash, the surviving player is awarded points equal to the number of segments in the crashed player's trail. This means that the longer the players last before crashing, the more points are at stake. Thus, it's possible to catch up even if you're way behind.

Each time you crash, you lose one "life." Each player starts with ten lives, and the game ends when one player runs out. After each crash, the screen updates the score and reminds you how many lives each player has left. To restart each round, press the joystick fire button.

When the game is over, you get a chance to change the skill level for the next game. Just to get a peek at how fast machine language can be, try a game at level 9. You'll be lucky if you can make one turn before crashing into a wall. Yet even this level had to be slowed down with delay loops!

See program listings on page 165.

PITSTOP.™
WHERE WINNING IS THE PITS.



You'll never make Grand Prix champion just driving in circles.

You've got to stop sometime. The question is when. Right now you're in the lead. But the faster you go, the more gas you consume. And the quicker your tires wear down.

If you do pull into the pits, though, you lose precious seconds. So it's up to you to make sure the pit crew is quick with those tires. And careful with that gas. Otherwise, poof! you're out of the race.

So what'll it be, Mario? Think your tires will hold up for another lap? Or should you play it safe and go get some new ones?

Think it over. Because Pitstop™ is the one and only road race game where winning is more than just driving. It's the pits.

Goggles not included.

One or two players; 6 racecourses, joystick control.

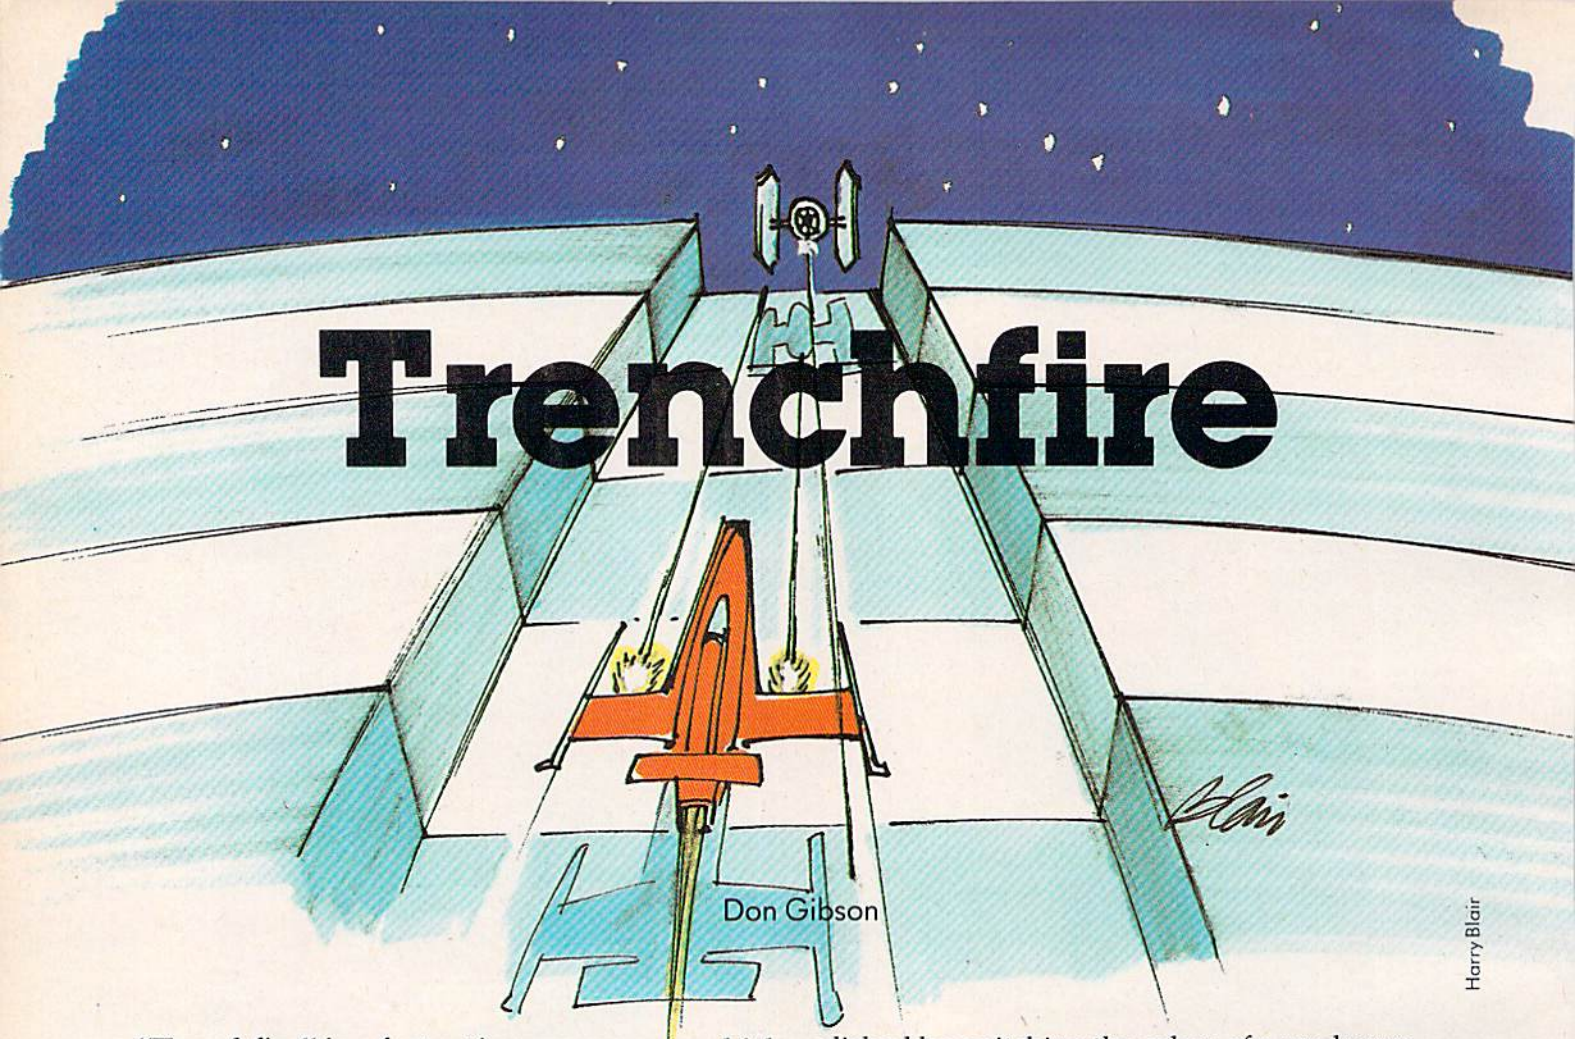
Trenchfire

Don Gibson



Harry Blair

"Trenchfire" is a fast-action space game which uses the speed of machine language (ML), the power of sprite graphics, and a special trick to simulate motion. Originally written for the 64, we've added an all-ML version for the VIC.

As the game begins, you find yourself on a distant planet, speeding through a trench formed by an earthquake fault. You are in your trusty craft, attempting to infiltrate evil King Krypos' lair, where he holds your king captive. But first you must face King Krypos' deadly kamikaze drone ships. The battle never seems to end—you blast and dodge debris only to encounter another wave of enemy ships. Only total concentration and quick reflexes bring success in "Trenchfire."

The 64 Version

Written in BASIC, with several ML subroutines, Program 1 (the 64 version) requires simply typing RUN after entering and SAVEing the program. Using a joystick in port 1, you must shoot and destroy the drone ships before they get too close. You can also avoid them by dodging left or right.

You begin the game with three ships. However, a new ship is awarded for every 1000 points (a total of seven ships is possible).

Simulating motion in Trenchfire is accomplished by switching the colors of a predrawn trench. The process uses custom characters in multicolor character mode and a short ML routine to switch background color registers. Another ML routine controls joystick reading and ship movement to provide fast response.

The VIC Version

The VIC version requires an 8K expander to enter and save Trenchfire. You must also use the abbreviated version of MLX found elsewhere in this issue (see "CUT-OFF!").

Follow these procedures carefully:

1. Insert the 8K expander, turn on your computer, and enter this line:

```
POKE 44,24:POKE 24*256,0:NEW
```

2. Enter the short version of MLX.

3. Delete line 100 from the MLX program, and change the following line:

```
210 S=4352:E=6079
```

4. Type RUN.

5. Type in the VIC version (Program 2) of Trenchfire.

6. SAVE what you typed into MLX to tape or disk.

7. Turn your computer off and remove the 8K expander. Turn it back on.

BRISTLES™

Starring Peter the Painter

designed by Fernando Herrera

C-64 conversion by Adam Bellin

From the creator of **ASTRO CHASE™** (Sci-Fi/Fantasy COMPUTER GAME OF THE YEAR, 1984)[1] and My First Alphabet™ (winner of the Atari® Star Award) comes BRISTLES.

☐ Reviews: A+ "The action is fast and frenetic ... If you want a game with definite patterns, strategies, great sounds and plenty of action—this is the one."[2] #1 Best Selling computer software in New York.[3]

☐ Features: Real Time Animation™, Sex-Select™, Slow motion, 1 to 4 player option, hidden messages, 8 game screens each with 6 skill levels, hi-res graphics and "invisible paint."

☐ Systems: **COMMODORE 64™** & **ATARI HOME COMPUTERS™**

You must act quickly to defend yourself against the attacking spaceships (64 version).

8. Now LOAD "TRENCHFIRE",1,1 for tape. For disk, LOAD "TRENCHFIRE",8,1.

9. Enter SYS 4352 to run the program.

The VIC version, which is all ML, plays almost identically to the 64 version, but has added features. You start with three ships, earn a bonus ship for every 1000 points, and can achieve a maximum of seven ships. Extra features include a pause function (press SHIFT/LOCK) for freezing

In the VIC version of "Trenchfire," the player has just launched two missiles.

the game at any time, and four levels of play. Press one of the function keys to choose a level:

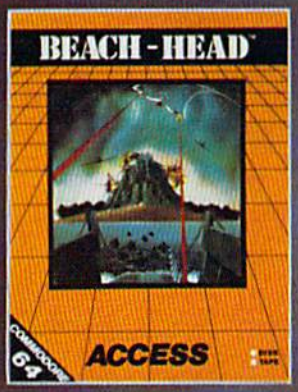
f1 beginner	**f5 advanced**
f3 intermediate	**f7 expert**

If you don't choose a level of play, the program defaults to the intermediate level. The expert level is only for the strong of heart. You also go up one level for every 250 points scored.

See program listings on page 151.

ACCESS

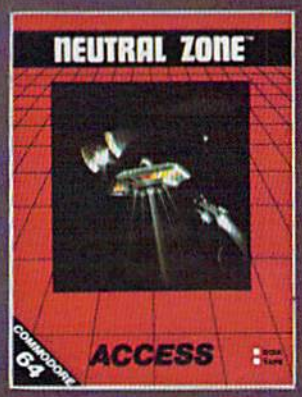
NOTHING BUT THE BEST

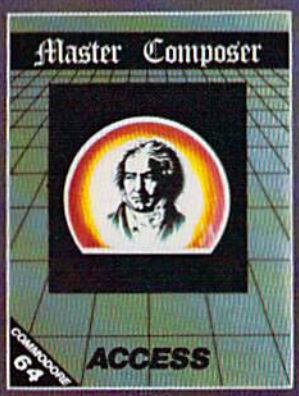


GENERAL QUARTERS! BATTLE STATIONS! As chief commander of land and sea forces in the Pacific, your mission is to obtain a quick naval victory, and invade enemy territory with land forces. BEACH-HEAD™ is a 100% machine language game and offers multi-screen action with high resolution, three dimensional graphics. (Suggested retail price...$34.95)

NEUTRAL ZONE™ takes you to the outer edges of the galaxy, to ALPHA IV, a long range early warning station whose mission is to detect alien intruders from other galaxies.

NEUTRAL ZONE™ is the ultimate in high resolution, fast action, arcade quality games. It is written in 100% machine language and features smooth scrolling of the 360 degree panorama. The realism is unbelievable. (Suggested retail price...$34.95)





MASTER COMPOSER™ is the perfect utility for programming music on the Commodore 64. It is fun, easy to use and very powerful. Master Composer takes full advantage of the sound synthesizer to produce all types of music from simple melodies to intricate compositions. You can compose your own musical scores, experiment with different arrangements and instruments, program your own accompanyment, or just type in your favorite sheet music. (Suggested retail price...$39.95)

SPRITEMASTER™ is not just another sprite editor. It's the finest utility available for multicolor sprite animation and game programming. It will have you making full color animated objects in just minutes. People running,birds flying or tanks rolling are a snap with Spritemaster. It will automatically append your sprites to other programs. It's easy to use and understand and comes with a full 21 page instruction manual and samples of animated sprites to get your started. (Suggested retail price...$34.95)

POKER

August J. Kwitowski

"Poker" is an original color and sound version of the classic card game of draw poker. The format and style of play are similar to those of commercial poker machines. Written for the VIC with at least 3K memory expansion, we've added a version for the 64.

"Poker" opens with a dynamic introduction featuring color, sound, and horizontal text scrolling. The number of each round is announced, and five cards are dealt at random. You build your hand by choosing which cards to keep or exchange (up to three cards can be drawn). The computer ranks your hand and announces the payoff, if any. Your cumulative winnings (or losses) are displayed at the top of the screen. The higher the hand, the more you win. For example, you break even on a pair of jacks or better, but a royal flush brings you $250.

Program Features

The program itself (VIC version) contains several interesting features:

1. The short routine in lines 230 and 240 scrolls single lines of text horizontally across the screen.
2. To conserve memory, lines of text used in the introduction are reused in the routine that announces the rank and value of the hand.
3. A machine language (ML) routine POKEd into the cassette buffer is used to create a colorful border. The routine is accessed by the SYS 828 statement in line 350.

Sophisticated Software from Britain.

Like real poker, you can keep your hand or draw up to three new cards (VIC version).

Are three of a kind worth keeping? The decision is yours (64 version).

4. Lines 30 and 40 (VIC version) check for a 3K memory expander. Line 50 then alters the ML routine to conform to the screen and color memory configuration of a VIC-20 with less than 8K of expansion memory.

5. A hand's rank and value is determined by using ML and IF-THEN statements in lines 2110–2210. The machine language performs a bubble sort (ranking) of the card values and determines which cards are duplicates (two kings, three jacks, etc.). The ML routines are POKEd into the cassette buffer and are accessed in lines 2020 and 2130.

REM statements are omitted so the game will fit in the 6655 bytes provided by a 3K memory expander. Those of you with 3K memory expansion must type Poker exactly as listed. There is *no* extra memory available for spaces within and between commands.

Program Description (VIC Version)

Line	
20	POKE machine language in buffer.
30–50	Detect memory configuration; alter machine language if 3K expansion.
60–210	Read constants.
220–300	Scroll lines of text with sound.
310	Set text lines to null strings if they're not used again.
350–370	Hand number routines; create card screen.
500–630	Select cards; determine display characters and colors.
640–800	Deal cards.
810–1550	Keep or change each of the five cards.
2000–2170	Determine rank of hand.
2180–2220	Determine value and correct line of text.
3030–3100	Display determination with sound.
4030–4050	Subroutine for hand number.
5000	Subroutine to flash border, colors.
5050	Subroutine to display winnings.

For those who would rather not type it in, I will be glad to make a copy of the VIC version. Such requests should include a blank cassette or disk, a self-addressed, stamped envelope, and $3. Mail to:

A. J. Kwitowski
302 Euclid Avenue
Glassport, PA 15045

See program listings on page 172.

Disk Drive Excellence

Every now and then a new product design seems intended to last forever...

Take our new single and dual Super Drives for Commodore computers. Their basic drive mechanism is industrial quality...designed, tested, and proven to take more use and abuse than most personal computing systems ever do. *Super Drives won't break down after only a few month's use.* These drives recognize the full Commodore disk instruction set and come with *both* serial and IEEE interfaces. *So, Superdrives are fully compatible with PET, Vic-20, and Commodore 64* computers...not just one or the other.

Super drives are loaded with extras. For instance, each one comes with an *extra 8K of RAM* inside the disk unit, a *sophisticated 15K ROM* operating system *a futuristic self diagnostic routine*, and *high speed disk formatting*. Your Superdrive comes complete with all cables and connectors plus instructions to put it into use immediately. Single drives are $399.95 and dual drives are $699.95. Please add $6.95 for shipping and insurance. VISA and Mastercard are accepted. By the way, these drives are in stock for immediate shipment.

Superdrives cost more than other drives. But then, you'd expect to pay more for Excellence. Remember, no one was ever sorry they bought the best. Order your own single or dual Superdrive today and step up to a new level of *Disk Drive Excellence*.

By the way, we specialize in unique and hard to find items for your Commodore computer. Write or call for a free copy of our software and peripheral brochure!

Will your printer interface pass the Commodore® printer test? We don't think so!! Ours will.

The CONNECTION™ is truly the ultimate parallel interface for the VIC20™/COMMODORE 64™. This fully intelligent interface plugs into the disk (serial) socket just like the standard printer and you can easily assign it any device number. It will provide virtually TOTAL EMULATION of the Commodore® printer including all standard graphic characters (normal or inverse), column tabbing, dot tabbing, graphic repeat, dot addressable graphics, cursor up/down mode, and more. It responds to all of the standard commands (PRINT #, OPEN, CLOSE, etc.) to insure software designed for the Commodore® printer will operate with the CONNECTION™. Use it in the TOTAL TEXT MODE, or purchase our Universal* CONNECTION that works with virtually EVERY DAISY WHEEL OR MATRIX PRINTER with standard Centronics Parallel configuration. To take full advantage of your printer's special features, please specify the printer type. Available for STAR MICRONICS, BX80, EPSON, OKI, NEC, PROWRITER, BANANA, SEIKOSHA, RITEMAN, GEMINI10X and others. ONLY $119.00 Complete. (Additional ROMs are available if you should ever change printers).

THE CONNECTION PROVIDES:

1) A 2K Printer buffer.
2) Full LED Status indicators.
3) Complete Built in self test.
4) Printer reset switch.
5) Adds Skip over perf, margin set, programmable line length, program list format commands to your printer.
6) No need for extra cost, special tape loader for graphics.
7) All features easily accessed from software.
8) ASCII conversion, TOTAL TEXT, EMULATE, and TRANSPARENT Modes.

*Note: Only the Universal CONNECTION will not provide 100% Commodore graphics.

Tree Tutor For Tots

Janet Arnold

This educational program uses custom characters and lively graphics to teach addition to young children. Correct answers are rewarded; there are no penalties for guessing wrong. Originally written for the VIC-20, we've added a version for the Commodore 64.

Arithmetic is for the birds—if your youngster plays "Tree Tutor For Tots." This math program is suitable for small children (preschool through second grade) who are just learning to add. It is a tutor, not simply a drill, because it illustrates addition concepts using colorful, attention-getting graphics.

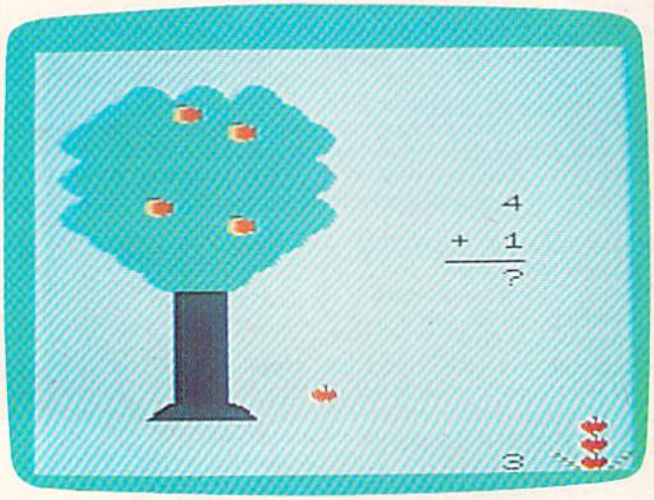
The child adds the apples hanging in a tree to those scattered on the ground. A correct answer brings a bird swooping from the sky to pluck an apple from the tree. The bird then drops it into a basket and flies off the screen. After ten right answers—and ten apples stacked in the basket—the game ends.

Choosing Levels Of Play

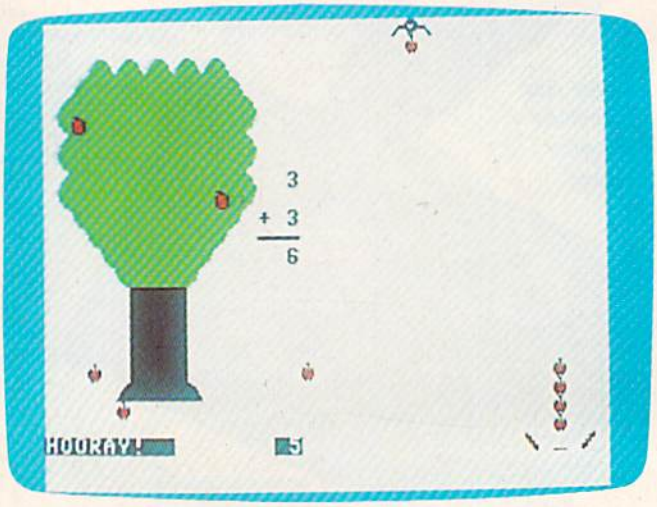
LOAD the program and RUN it. After a short wait, the title appears and you are asked to "Choose highest sum (2–9)." Hitting a 7, for instance, generates problems with answers no higher than seven. A beginner should choose 2, proceeding to the harder problems as the easier ones are mastered.

Next you are given an option for displaying the fruit. A beginner should hit 1; this tells the computer to show the apples when the problem is first printed. A 2 causes the fruit to appear only if the child gives a wrong answer.

When the tree and the problem are displayed, guide your child to discover the correct answer by



Four apples in the tree plus one on the ground. What does it add up to? (VIC version)

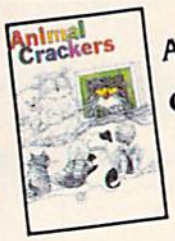


In the 64 version, the child has answered correctly. The bird is carrying an apple to the basket.

Kids climb to the top in our playground...

For the Atari 400/800™ and Commodore 64™

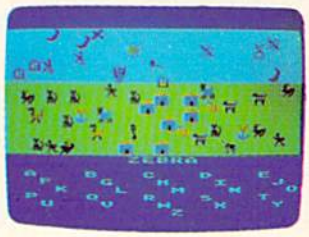
Because we offer more than just educational games. Our unique software brings the magic touch of the **Edumate Light Pen™** together with the amazing computer voice of **S.A.M.™**, the Software Automatic Mouth, so children can interact directly with our teaching programs. **Playground Software™** makes learning and learning to use the computer child's play!



Animal Crackers™

Preschool to Grade 3

Our playground of active, colorful animals will have your child spelling new words in no time at all. **Animal Crackers™** combines the use of the **Edumate Light Pen™** and children's fascination with animals and computers to teach your children the alphabet as they learn to spell. By simply touching a letter on the screen with the **Edumate Light Pen™**, your children will create a screen full of animals and other playful objects. Not only is it fun, it's educational!



Unleash the creative talents of the big kids and the little kids in your family with the first electronic coloring book. **Computer Crayons™** comes complete with ready-to-paint scenes and an artist's palette of vibrant color. Additional options permit you to save and restore pictures easily, draw circles, lines, boxes, and erase in a single stroke.

Let your imagination run wild with the Sketch Pad that allows you to create your own video paintings from scratch.

Now anyone can transform our **Edumate Light Pen™** into an electronic paint brush with **Computer Crayons™**!

Computer Crayons™

For Kids of All Ages

Alphabet Arcade™

Preschool to Grade 1

The most fundamental lesson every child must learn is how to draw the letters of the alphabet. The **Alphabet Arcade™** utilizes the **Edumate Light Pen™** and an exciting arcade environment to provide the children with an innovative way to acquire basic lettering skills. Mistakes are noted immediately and correct entries rewarded in a series of action-packed settings that will delight and inspire your children. Discovering the alphabet has never been this much fun!

All Playground Software is lightpen *and* joystick compatible.

Playground Software™ presents a series of engrossing tales that use our **Edumate Light Pen™** and your child's imagination to tell a story.

Our first Bedtime Story enlists the aid of your child to help Little Red Riding Hood escape from the Mean Old Wolf, and has all the colorful animation and full-scale sound that children love.

Your child will be taught letter and word recognition while having all the fun that goes along with helping to tell a story. So let your child play a part in the first of our interactive and educational bedtime stories...**Little Red Riding Hood**!

Bedtime Stories™

Preschool to Grade 3

Playground Software...Kids are all over us!

Each package $29.95 on disk or cassette. Prices subject to change without notice. See your local dealer or order direct from p.o. box 3470, department cg, chapel hill, north carolina 27514. Add $3.00 for postage and handling. Credit card orders call 1-800-334-SOFT.

playground software

a division of FUTUREHOUSE INC.

During December and January you can take advantage of our Special Christmas Offer and receive an Edumate Light Pen™ (retail price $29.95) for only $14.95 when you purchase all four Playground Software™ packages, or receive a 10% discount toward the purchase of the Edumate Light Pen™ when you buy any Playground Software™ program.

saying something like, "There are two apples in the tree and one more on the ground. See this problem? It says 2 plus 1. How much is two and one? Let's count the apples and find out." Point out that the number of apples in the tree is the same as the top number of the combination, and that the number of apples on the ground matches the bottom number. Your child will learn that the apples are a *picture* of the addition problem.

When you think your youngster is ready, suggest trying to answer without counting the apples, using fruit option 2. If the answer is wrong, the apples appear on the screen; your child can count them to discover the correct sum.

An apple is dropped into the basket for every right answer, even if it took several guesses, as an incentive to keep trying. After collecting ten apples, you receive a message stating the total tries, although a preschooler probably won't care. He or she will, however, enjoy seeing the bird fly down to land on the message, which is a further incentive to complete ten problems.

Incorrect Keys Are Ignored

Because tots often hit the keyboard accidentally, I set up lines 10, 14, and 78 (VIC version) to accept only numerals in the stated range. Every other key will be unresponsive (except for the RUN/STOP key). The program uses a GET statement, so the child need not hit RETURN after entering an answer. Line 76 resets the number of characters in the keyboard buffer to zero, in case a key was pushed between problems.

Here is a program description of Tree Tutor (line numbers for the 64 version are in parentheses):

Lines	Description
2–6 (100–180)	Title, custom characters created, variables set.
8–14 (190–240)	GET highest number desired; GET fruit option.
16 (250–260)	POKE basket.
18 (270)	Main loop—count ten correct answers.
20–22 (280–290)	Choose problem (see paragraph following).
24 (300)	Erase former tree, problem, and message.
26–38 (310–410)	PRINT tree and problem.
40–74 (420–590)	POKE fruit.
76–80 (600–620)	GET and judge answer.
82–84 (630–650)	Routine for wrong answer.
86–106 (660–800)	Reward correct answer.
108–122 (810–920)	Reward ten correct answers; "play again" option.
124–126 (930–940)	Subroutine for falling apple.
128–138 (950–1000)	Data for custom characters.

When the computer chooses an addition problem in lines 20–22 (280–290 in 64 version), it first generates a random top number anywhere from one to the highest number family (F) selected by the user. The bottom addend is never greater than F minus the top addend, so that the sum will never be greater than F. T1 and B1 hold the values of T and B, the top and bottom addends, from the last displayed problem. This is to insure that an identical problem does not follow immediately.

One oddity you will notice—my children discovered it right away—is that the apples in the tree are different than the apples elsewhere on the screen. The program POKEs the tree apples in multicolor mode, which causes some loss of horizontal resolution. This results in a boxier-looking apple, but it does fill in the empty spaces around the apples with green, the border color, rather than with white, the screen color.

My older son strongly dislikes seeing two shapes of apples, so I devised the following program change for those who share his idiosyncrasy:

Line

128 (950 in 64 version) Change first eight numbers to 240,60,255,255,255,255,255,60

This program uses up most of the memory in an unexpanded VIC, so don't add any unnecessary spaces.

I will make a copy of Tree Tutor for Tots (VIC version only) if you send a blank tape, a self-addressed, stamped envelope, and check for $3 to:

Janet Arnold
620 Alger
Owosso, MI 48867

See program listings on page 148.

NEW C-64 blockbusters

BANDIT

THE slot machine connoisseur's only serious choice! BANDIT includes both double progressive and standard 5 pay-line type slot machines (menu selectable). Both slots realistically simulate the action and feel of the real thing. With separate status screen. 100% machine code.

C-64 DISK $17.25

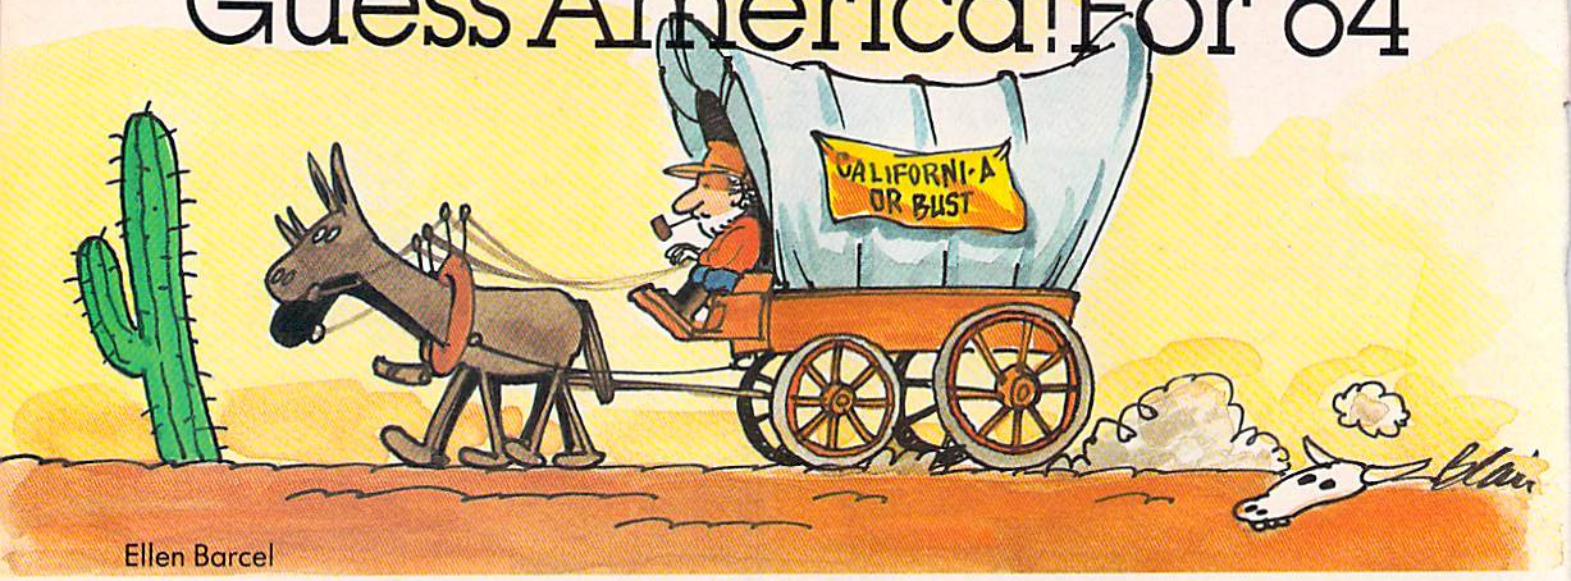
Guess America! For 64



Ellen Barcel

"Guess America!" is a historical game, and it's fun. The goal is to travel across the U.S. in a covered wagon by answering questions about history, geography, and current events. Questions can be added or modified, making it possible to create a customized quiz or review for children at any learning level.

"Guess America!" is an educational program that uses the 64's sprite and graphics capabilities. After randomly selecting a key word, the program scrambles and displays it. You have 15 seconds to type in your guess with the correct spelling. If you cannot answer correctly, you are given a clue. A second and then third clue (each a little easier than the one before) are given if you still don't have the correct answer.

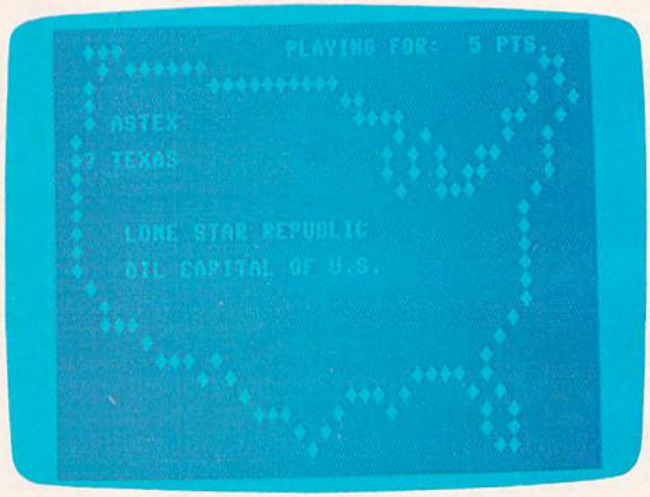
After five words have been selected, the game is over. A covered wagon then travels westward across a map of the U.S., and the higher your score, the farther the wagon travels. A high score will get you all the way to California.

The game may be repeated as many times as you wish. Each new game, the computer will randomly select five words from a list of 31. If a key word happens to be selected more than once, the second scramble will usually be different than the first.

Modifying The Program

The game can always remain fresh because you can very easily modify or add key words and clues. Your only limit is the computer's memory. (As written, the program uses about 11K.)

Terms can also be changed so that they represent a single topic—U.S. presidents, or inventors, for example. To delete a key word and clues permanently, omit the entire DATA statement when typing in the program. You can also simply insert a REM after the line number if you wish to temporarily delete a DATA statement. Just remove the REM if you wish to use the DATA statement before running the program.



A series of clues is given if you can't unscramble the word the first time in Guess America.

To add words and clues, use this format:

Line number, DATA, key word to be scrambled, clue 1, clue 2, clue 3

Be sure to always include commas between words and clues. If clues are long, two line numbers and DATA statements may be used. The key word may also include a hyphen or space (as in New York), but not commas, colons, or double quotation marks. Make sure that the line DATA *,*,*,* is the last DATA statement in the program.

If you'd rather not type in the program, I'll make copies on tape. Send a blank cassette, $3, and a self-addressed, stamped mailer to:

Ellen Barcel
P.O. Box 39
East Setauket, NY 11733

See program listing on page 155.

What do you like best about COMPUTE!'s GAZETTE?

It teaches me more about my Commodore 64 than any other magazine. Explanatory articles on how programs work. The Gazette is the best magazine for Vic-20 owners. Good writers! Your program listings are outstanding. The Gazette Feedback column. I rate it the best magazine for my needs. The interviews with professional programmers. I'M NEW AT COMPUTING; THE GAZETTE IS VERY HELPFUL. Plain language articles for beginners. It helps me learn the essentials and excitement of computing. The articles on Machine language. Educational programs in basic. It's not too technical for the average person. The advanced programming techniques. The ads and reviews. ARTICLES ABOUT DISK DRIVES AND MODEMS. The large number of programs. The programming tips and reviews. Information on things the manuals do not explain. Your professional writing; you have very knowledgeable authors. I like learning how computers work. It tells me about current events in the computer industry.

The above comments are from The Editor's Feedback Cards, a monthly part of our continuing dialogue with the readers of COMPUTE!'s GAZETTE.

Every month, readers of COMPUTE!'s GAZETTE get ready-to-type-in games and applications programs, tips on programming in BASIC and machine language, reviews of new hardware and software, feature articles that explain and entertain, and much more.

If you would like to become a GAZETTE subscriber, return one of the subscription cards in this issue or call the number below. The basic subscription price of $20/year saves you $10 off the newsstand price. Why not subscribe today? Call Toll Free in the US 800-334-0868, 919-275-9809 in NC.

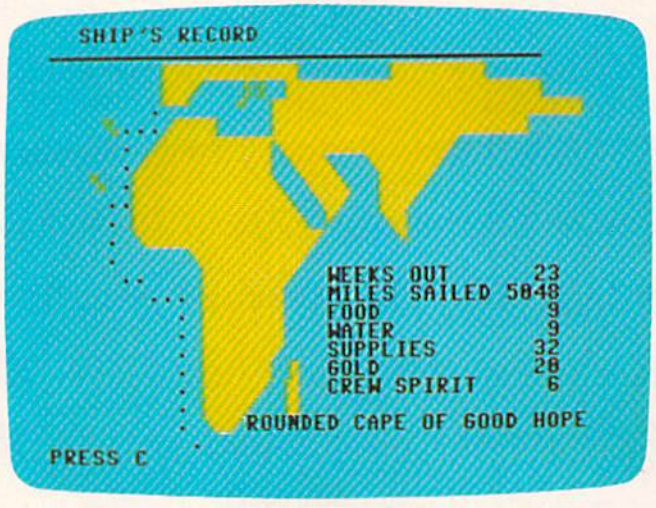
Sea Route To India:

A Historical Simulation For The 64

M. J. Winter



Rounding the Cape of Good Hope in "Sea Route To India."

Here's your chance to make history on the "Sea Route to India." Following in the wake of Portuguese explorers, you can find gold and adventure, if you don't starve, or get sunk by pirates, or capsize in a terrible storm.

One of the earliest games for PET computers was *Westward Ho*, in which the player becomes a turn-of-the-century pioneer, trying to cross the country in a covered wagon. Decisions must be made about purchasing food, supplies, and ammunition. Various experiences—hunting, Indian attacks, settlements—occur on each leg of the journey. By repeatedly playing the game, the user learns where to spend money, how to hunt, and whether to trust strangers. Luck, however, is a major factor in success. PET users of all ages played the game over and over until they finally reached the West Coast.

Westward Ho was an abbreviated version of *Oregon Trail*, in which the game's designers took pains to produce an accurate simulation. They used prices from contemporary catalogs, and calculated frequencies and likely locations of Indian attacks by studying historical accounts. The result was a game that was both interesting and informative.

Sail The Bounding Main

"Sea Route To India" uses a similar technique, drawing on the voyages made by Protuguese explorers in the fifteenth century.

The subroutine beginning at line 15000 introduces the game and gives you the rules.

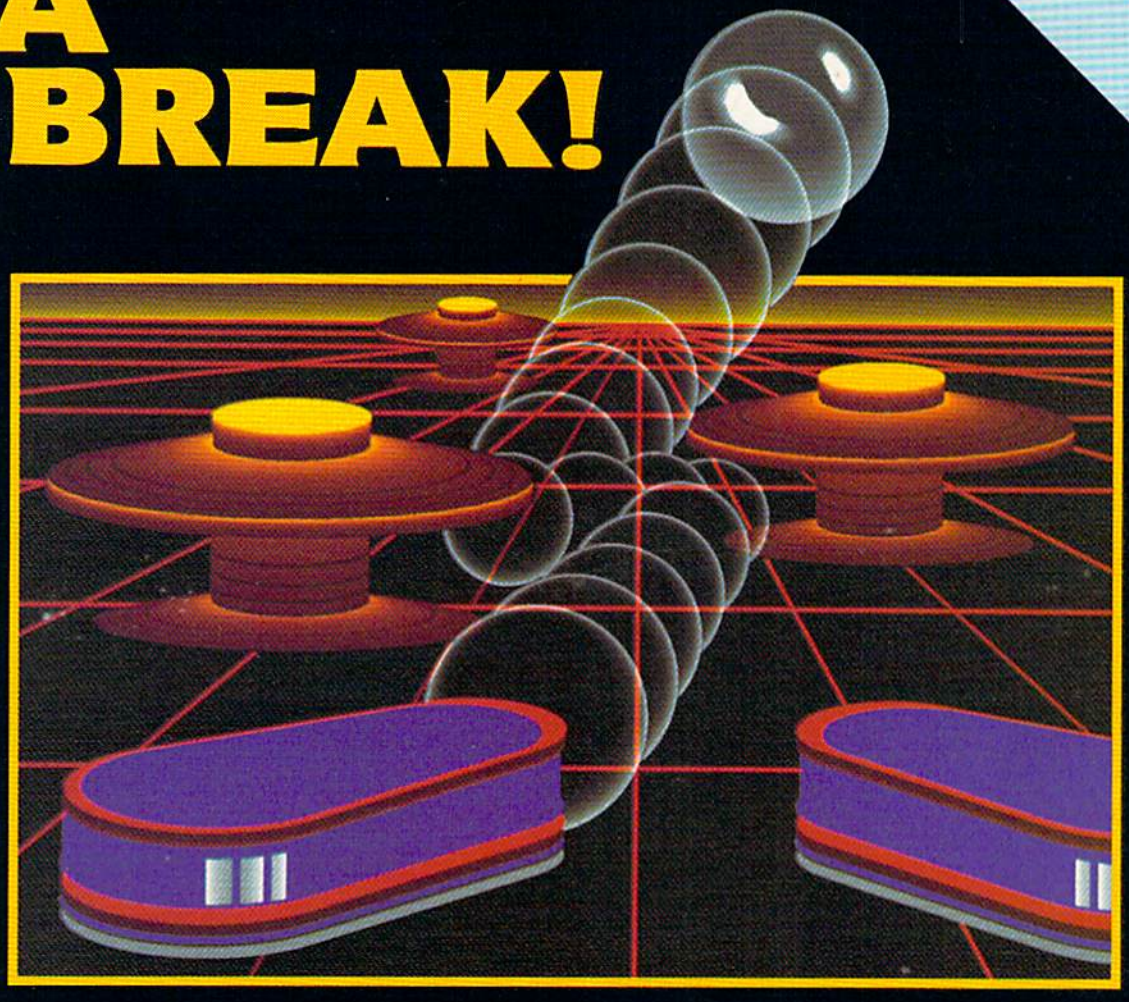
Your goal is to sail from Lisbon around Africa to India. During the voyage, you encounter the same dangers faced by the real explorers: hunger, thirst, pirates, natives, weather, mutiny, and attack by Arab traders.

Your journey is charted in weeks on a map displayed on the screen. Lines 500–800 contain the loop for each week. The miles you sail depend on the weather. Each week your store of water, food, and supplies decreases by one unit. If your voyage lasts more than 30 weeks, the crew's happiness also decreases by 1.

Each week you have a new experience; line 560 sends the program to the appropriate event.

TAKE A BREAK!

For Commodore 64



WITH NIGHT MISSION PINBALL

You deserve the best. You've earned it. Now reward yourself with a session of **Night Mission PINBALL**, the most realistic and challenging arcade simulation ever conceived! ■ Stunning graphics and dazzling sound effects put **Night Mission PINBALL** in a class by itself. Game features: multi-ball and multi-player capabilities, ten different professionally designed levels of play, and an editor that lets you create *your own* custom modes. ■ So take a break with **Night Mission PINBALL** from SubLOGIC. Winner of *Electronic Games* magazine's 1983 Arcade Award for Best Computer Audio/Visual Effects.

(217) 359-8482 Telex: 206995

In the early part of the voyage, you sight whales and other ships, and sail into terrible storms. But after you pass the Cape of Good Hope and pick up your Indian pilot, you might be attacked at any time by Arab dhows.

Check Your Progress Every Week

At the end of each week, the program assesses your situation. If you sailed far enough to visit the Canary or Cape Verde Islands, then your water, food, supplies, and crew happiness are restored. The ship's log is updated, and the game map shows your progress. Lines 91–93 define DT$ (dots); three characters are needed for each dot. One dot on the map represents 200 miles (line 1002). Then, if there have been no fatal shortages, the voyage continues for another week.

Your ship "sails" across the screen in line 15155. In the race (lines 3093, 3096), the ships are placed at the right of the screen and a string of DELETEs is printed several times. (If you win the race, the crew is happier; they become disgruntled by a loss.)

Lines 1000–1250 contain the whale hunting routine. The whales are within a long string (F$) of *shifted spaces*, which are cyclically rearranged (line 1210) and the leftmost 40 characters printed each time. The program checks the keyboard, then moves the whales until you press H, which drops the harpoon. The program then alternately moves the whales and lowers the harpoon.

To check whether the harpoon hits a whale, the screen is opened for INPUT (line 1100). The entire row of the screen to the right of the harpoon is input. If the first character is not a shifted space, a whale has been hit.

Landfall To Gather Supplies

The subroutine beginning at line 4000 describes the sighting of a river mouth. Landing offers you a chance to get food and water, and to cheer up the crew. Sometimes (line 4060) natives appear. As many early explorers discovered, they are unpredictable. Sometimes they are friendly and trade gold for trinkets (cheering up the crew); sometimes they attack.

If they attack, you must type RUN and press RETURN quickly. The clock is set to 0 in line 4320, to time how fast you typed in RUN. After you press RETURN, the program looks at the clock. If more than 200 jiffies have passed (line 4340), the natives attack and kill you.

The same timing technique is used when the Arab dhows attack. The Arabs are fiercely determined to protect their trading routes. Vasco da Gama himself was nearly trapped by them more than once.

The program as written will run on a Commodore 64 or PET.

Readers who do not want to type in the program can obtain a copy by sending a blank tape or disk, a stamped, self-addressed mailer, and a check for $3 to:

M. J. Winter
Math Department, Michigan State University
East Lansing, MI 48824

Data Manager For The Commodore 64

Dale F. Brown

Simplicity, versatility, and low cost are the attractions of *Data Manager*, an information collection and retrieval system from Timeworks. It's not the most sophisticated data base system around, but *Data Manager* is a good solution for those seeking a simple, easy-to-run, computerized index card system for home or personal applications.

The program, while not endowed with blazing speed or a lot of fancy options, can bring some organization to your Christmas lists, club membership records, bowling team scores, addresses, or account numbers.

If your goal is to crunch a lot of information, process long columns of keywords, or do extensive cross referencing, *Data Manager* might fall short of your expectations.

Have A Plan From The Beginning

Data Manager initializes a disk and formats it when you start up the system. Before formatting, however, you must decide how many lines per record you want. Once the data disk is formatted, you cannot change it.

Records can have from one to eight lines, with up to 30 characters per line. A normal data disk will hold 1040 five-line records.

When new information is entered, the program automatically moves to the end of the data file. You enter information for each line of the record, then you can correct your entry. If everything is correct, the program writes your record to disk.

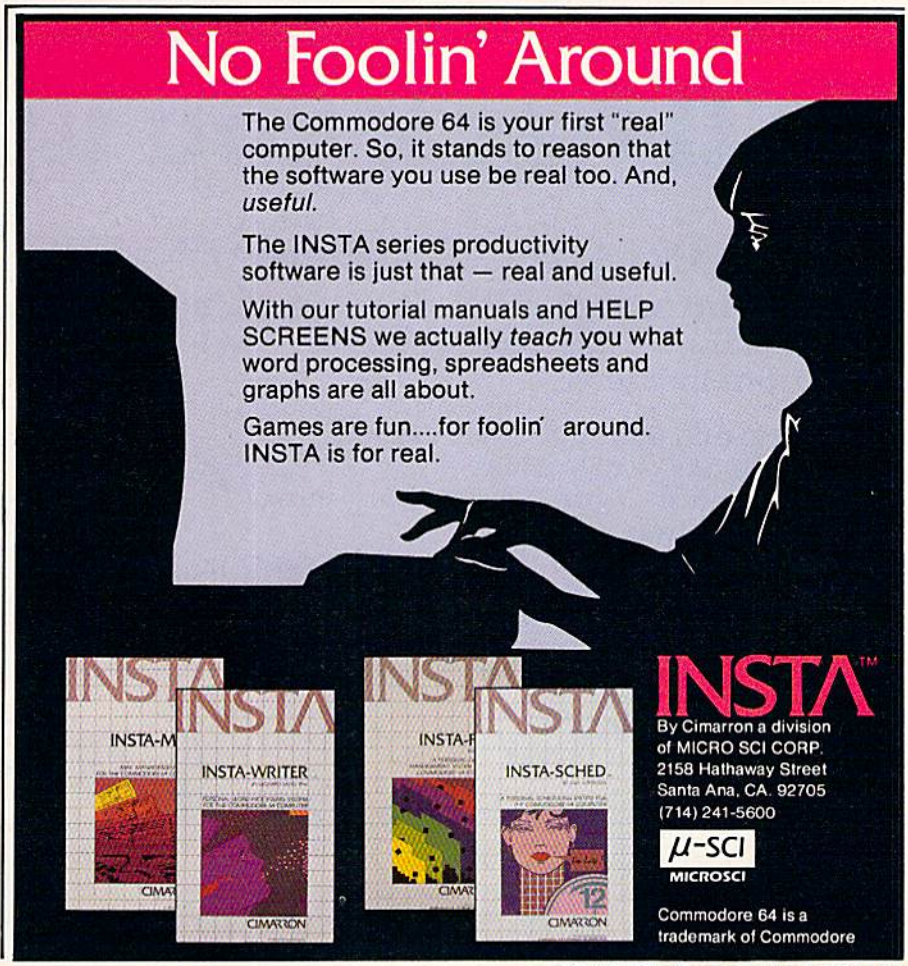
When you replace a record, each replacement line is written to disk as you enter it, so this process can be a bit slow.

Retrieving Data

Once all your records are entered, you have several ways to recall and display the data. You can search and recall by exact name, by data pointers, or by index codes.

Data pointers are references to lines within the records—b› might be used to search for birthdates, or tpsc› might be used to find top scores in your bowling records. The index code might be (R) or (F) entered into your address records to differentiate between relatives and friends.

If, for example, you wish to find the names of everyone in your records with a birthday in June, you could use the b› data pointer and specify a range of 06/01/00 to 06/30/00.



No Foolin' Around
The Commodore 64 is your first "real" computer. So, it stands to reason that the software you use be real too. And, useful.
The INSTA series productivity software is just that — real and useful.
With our tutorial manuals and HELP SCREENS we actually teach you what word processing, spreadsheets and graphs are all about.
Games are fun....for foolin' around. INSTA is for real.

Commodore 64 is a trademark of Commodore

The X-Search Function

Data Manager includes an X-Search feature that allows you to perform secondary searches on your data. In the example above, you asked for the names of everyone with a birthday in June. You could take it a step further and use X-Search to search that data subset for records that contained an (R) index code. The result would be a list of your relatives who had birthdays in June.

After using X-Search, you can print out the results and then use X-Search again and again to search for different index codes or data pointers.

The program also allows you to retrieve and analyze numerical data within records. For example, if you used tpsc› in each record to display the top bowling score of each member of your bowling club, you could retrieve that data, add it, average it, compute a standard deviation, and draw a bar chart of the information.

Data Manager includes a 20-page manual that takes a bit of study to fully understand. But once you learn the basics of record entry and retrieval, you'll find the program a good tool for organizing and maintaining personal and household records.

well change your mind.

The game's instructions are concise and clear. The opening scenario, complete with a game demonstration screen and a delightful melody that's somehow vaguely familiar, scrolls options across the screen center—press the space bar to start, I for instructions, and H for high scores.

Selecting I gives you all the information you need to play the game effectively. The game options are spelled out. You can choose to play using the joystick or keyboard. You can press RUN/STOP—RESTORE to reset the game. Or select one of ten levels for game speed or skill level. And the ever-welcome pause function is included. Pressing P freezes the game until you're ready to resume by pressing it again.

More Than Meets The Eye

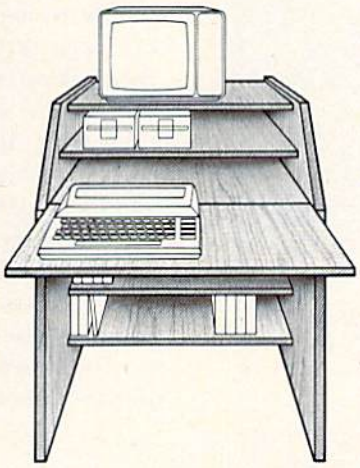
The object of the game is to cross a pond by hopping on the backs of four very fickle turtles, gather fruit, and return. Sounds easy, but it's not. The harmless looking turtles float on the water's surface and bob. But, one or more of them will submerge unpredictably. If you're in the middle of a jump and the turtle you're about to land on decides to take a dive, you're in the drink. This costs one life (you start with three, and receive a bonus life every time you advance a level).

Assuming you start at the default speed and level (Level 0 for both), the first couple of rounds are not terribly difficult. Only one turtle at a time will descend. But you're soon into the next round and possibly a little overconfident. You now have to contend with two diving

How to make your computer look as smart as it is.

Store it in a beautiful piece of furniture specifically designed for the proper operation and storage of your home computer equipment.

- Upper unit shelf adjusts to most computers.
- Keyboard shelf at correct typing height with plenty of work surface.
- Monitor placement at proper height and viewing distance eliminates fatigue.
- Lower unit shelves for storage.



- Desk shelf swings up to close off unit when not in use.
- Compact design: 32"w x 36"h x 24"d.
- Indestructible natural oak or walnut woodgrain finish.
- Ready to assemble with only a screwdriver.

ONLY $149.00

No Lookin' Around

We know. You've been looking everywhere for 64 software, INSTA's *interactive* line of software is just a phone call away.

Imagine, specially designed software that "talks" to one another. Your home budget created with CALC instantly becomes a GRAPH. And your club membership list with addresses and monthly dues quickly becomes a form letter, printed over and over again, automatically, for each member.

So, no more lookin' around. INSTA is here now!

Commodore 64 is a trademark of Commodore

A turtle begins his descent in Purple Turtles. *The pause feature is one of many extras in this lively game for the Commodore 64.*

turtles. This pattern continues until you're at a point where all four are acting undependably. After a few blunders, you'll soon learn that there's more to the game than meets the eye. You must develop a strategy.

Another tendency for first-time players will be to play cautiously and deliberately. This will get you nowhere, as there's another obstacle to overcome: the timer. You must successfully return five pieces of fruit within a fixed amount of time to get to the next level. The timer, placed somewhat inconspicuously at the top of the screen, moves along deceptively slowly. The more you concentrate on the treachery of the turtles, the more likely GAME'S OVER will flash on the screen.

The Frenzied Owl

There are a lot of nice surprises and pleasant distractions in *Purple Turtles*. Besides very appealing color combinations, the authors have provided an extremely active screen by taking full advantage of the 64's sprite capabilities. The blue sky is filled with various colored clouds and hot-air balloons which float happily across the screen, unaware of your plight below.

The trees on each side of the pond are interesting, too. The tree on the left, your starting position, is home to an owl that blinks and twitches his ears throughout the game. When you return successfully with your fruit, the owl goes into a frenzy, shrieking hysterically. This provides a not so gentle reminder that your score has increased.

The tree on the other side of the pond bears a different fruit for each new level achieved. Before you start across the pond each time, one piece drops to the ground. You collect it automatically by crossing the pond.

Purple Turtles is quite well designed. It's innocent and enchanting, yet you'll not quickly master any of the higher levels. If Quicksilva can produce more games of this quality, it is sure to find a niche in the U.S. software market.

COMvoice: Voice Synthesizer For The VIC-20

Todd Heimarck, Assistant Editor

COMvoice, a voice synthesizer for the VIC-20, gives your computer the ability to talk, and it's remarkably easy to use.

The COMvoice package contains a cartridge, a speaker with cord, and a 20-page instruction manual. The cartridge plugs into your VIC, and the speaker plugs into the cartridge.

If you don't like reading instruction manuals, all you need to know is that COMvoice adds one new BASIC command: SPEAK. This command works almost like PRINT, but instead of putting words on the screen, the computer talks to you. You must enclose the words to be spoken in double quotation marks. A dial on the cartridge controls the volume.

It Knows The Tough Words

COMvoice will pronounce 95 percent of English words correctly. It has a fairly sophisticated method of figuring out the connection between spelling and speech. For example, it correctly pronounces *tough, rough, though, although, bought,* and *brought*. It does very well, considering the different sounds *ough* can represent.

Occasionally a strange word pops up. COMvoice has problems pronouncing *pizza* (piz-ah), *women* (woh-men), *integer* (int-eej-er), and certain other words. This usually happens because a word is spelled one way but pronounced another. If you run into a problem word, you can correct it by deliberately misspelling it (so it looks like the way it is spoken).

COMvoice can also speak letters and numbers. The voice is somewhat mechanical and monotonous; if you've heard computers talk in movies (*WarGames*) or on television (*Whiz Kids*), you can get a good idea of the sound quality. But you can add four levels of inflection, to stress certain words or to make questions sound more natural.

Victree™ The Mighty Oak

created for *COMMODORE 64* and *VIC-20* users by a programmer named Robin.

This remarkable device lets you branch out on your versatile Commodore machines. The *VICTREE* makes BASIC basic with its coordinated hardware and software package. Access your disk and debug your programs faster. The *VICTREE* contains the *most* convenient programmer's aid package that you can get in personal computers today.

You can plant the *VICTREE* in your programming garden with incredible ease. And it's easy to use, too, because of its simple, valuable commands.

42 Added Commands

Like AUTO, which automatically numbers your lines when you are writing a program. DELETE, which removes program lines and sections. And LCOPY and LMOVE (you can probably figure these out!).

The *VICTREE* lets you take fuller advantage of the Disk Operating System in your 1541 Disk Drive. It gives you key BASIC disk and file commands that you could not otherwise get without much greater expense. Here's a small sample:

The DIR command immediately reads the disk directory while leaving the computer's memory completely untouched, and without disturbing whatever program you're working on.

CONCAT links (concatenates) disk files. And the *VICTREE* also has SAVE, LOAD, HEADER formats an old or a blank disk for use.

SCRATCH, and INITIALIZE file command capabilities.

Other Popular Features

EXECUTE, MERGE, and CHAIN are features which will run programs off disk, let you merge two programs off a disk, or add one after the other.

VICTREE has 14 commands that permit the greatest program writing and fixing ease. For writing, the toolkit of commands includes FIND and CHANGE (the programmer's search and replace), which simplifies making changes in your program. The RENUMBER command offers helpful timesaving, by removing the drudgery of line renumbering.

For debugging, TRACE lets you execute the program under *your* control, letting you see the next line that will come up. DUMP lists the names of your variables and their value.

The *VICTREE* allows most BASIC 4.0 programs, especially those for the older PET machines, to work on your *COMMODORE 64* or *VIC-20*. And for only $20 extra, *VICTREE* comes with a cable that roots you into almost any of the popular Centronics/parallel standard printers on the market today. And this carefully protected cartridge even has a very simple text editor that allows brief documents to be entered, printed out, or chained together and stored from tape of disk.

The *VICTREE* Keeps Growing

We recently grafted a "Print Using" BASIC command onto it. Bob calls it "The command that Commodore forgot." It lays out the format of your printout line. The 1983 *VICTREE* features a new switch, too, that turns the cartridge off and tells the computer that central memory is back in place.

Just plant your *VICTREE* cartridge in the cartridge port of your *COMMODORE 64* or *VIC-20* machine. You'll reap a harvest of programming benefits. And that's a lot of crop!

Now only $89.95, or $109.95 complete with the Centronics/parallel standard printer cable. (Cable alone costs $29.95.) Available immediately from your local dealer. Or order directly to Skyles Electric Works.

String Variables Spoken Here

You can set up string variables for pronunciation, for example, A$="WELCOME HOME": SPEAK A$. And there are several options for controlling pauses. A single space will cause a slight pause. Commas and periods will result in longer pauses.

The SPEAK command works in immediate mode (without a program line number) or within programs. The instruction manual also includes a list of over 60 sounds you can access with POKEs directly into memory. You can program speech either in BASIC or in machine language.

The most impressive thing about COMvoice is how easy it is to use. You don't have to learn a phonetic code that translates words into special numbers and symbols which only the computer recognizes, as with some other speech devices.

There are a variety of interesting applications you could develop with COMvoice. Imagine an arcade game that talks, warning you of sneak attacks or suggesting strategy. Or educational software for preschoolers who are just learning the alphabet. The computer could draw a picture of a bee next to the letter B and say it to the child. COMvoice might also be useful in data entry; the computer could tell you what you just typed.

Some Minor Faults

There are a few minor faults in this voice synthesizer. It has problems with the *ng* sound. It is difficult to tell the difference between *thin* and *thing*. And leaving off the closing quotation mark results in a ?SYNTAX ERROR. Programmers who regularly omit the final quote on PRINT statements (to save a bit of memory) may find this feature somewhat annoying.

If you are used to PRINTing multiple variables separated by commas or semicolons, you will have to remember that you cannot do this with the SPEAK command. SPEAK accepts only single string variables and it does not recognize string arrays. You can get around the single string limitation by converting arrays with a line such as A$=B$(1,6):SPEAK A$.

The four levels of intonation are based on (musical) tone rather than volume. The voice would sound more realistic if you could stress some words by making them louder than others. The only way to control volume is to turn the dial on the cartridge; you cannot do it from within a program.

And, finally, the RUN/STOP key is disabled while the voice is on. That means you cannot rudely interrupt the computer while it is talking; you have to wait for it to finish before you STOP the program.

Considering the overall effectiveness and ease of use, these flaws are merely quirks. Once you get used to programming with COMvoice, you'll learn to ignore them.

COMvoice uses a VOTRAX SC-01 chip and is sold with a one-year warranty. A Commodore 64 version is also available.

NEW! DATA COMMUNICATIONS TRAINING FROM NRI

Practical training includes computer, modem, test instruments, and access to exclusive NRI communications network.

Satellites . . . microwave . . . fiber optics . . . dedicated land lines. Suddenly the world is communicating in a new and different way, via digital data systems. People talking to computers . . . computers to computers . . . information is stored, retrieved, and relayed in nanoseconds.

Industry, opportunities to triple

Data and telecommunications is already a $150 billion industry and is expected to triple over the next five years. One typical company has grown from $85 million to $650 million . . . a 765% growth since 1978 alone. The need for qualified technicians to install, maintain, and service this enormous investment in high-tech equipment is tremendous even now. Opportunities and salaries can go nowhere but up and up.

NRI will train you at home

You can learn at home in your spare time to become a data communications technician with NRI at-home training. NRI will start you with the basics, build upon your knowledge with easy-to-follow, bite size lessons to take you into the world of digital data communications. You'll learn what it takes to work on satellite, microwave, fiber optic, and telephone data links.

And you'll learn at your own comfortable pace, without classroom pressures or evenings away from your family. Over the past 70 years, NRI has taught the latest high-tech skills to almost 2 million students to become the world's largest and most successful school of its kind.

Hands-on training includes computer, modem, breakout box and much more

NRI takes you far beyond "book learning." As part of your course, you receive plenty of practical hands-on training that gives you real-world skills. You get the Radio Shack Color Computer, with 16K memory to teach you the systems and language of data communications plus you get an operating modem to let you tie in with world-wide communications networks.

You build your own RS-232C interface breakout box, an indispensable installation and trouble-shooting instrument you'll use throughout your career. You receive a professional digital multimeter and the NRI Discovery Lab, where you construct solid-state circuits and demonstrate practical applications of the theory you've learned.

Exclusive NRI data network

You'll learn what data communications is all about by actually becoming part of an operating network. You'll go on line to "talk" to your instructor, take your final exam by computer link, communicate with other NRI students and leave messages on the NRI "bulletin board."

As part of your course, you'll also receive membership in THE SOURCE [sm], a regular $100 value. A phone call ties you into computers loaded with instant news, stock quotes, electronic mail, educational programs, games, even discount shopping and travel reservations.

Move into the future, send for Free Catalog

You can't find training like this anywhere else . . . only NRI trains you at home for an exciting and rewarding career in the brilliant new world of Data Communications. Mail the coupon right now for our big catalog of high-tech electronic careers showing all the equipment you get, detailed lesson descriptions, and career opportunities. Look it over and decide where you want your future to grow. Act now. There's a real need for trained data communications technicians.

Training includes all this equipment you keep . . . 16K computer, modem, breakout box, digital multimeter and the exclusive NRI Discovery Lab.

Seafox For The VIC-20

Tony Roberts, Assistant Managing Editor

Far beneath the surface of some distant ocean is a submarine awaiting your command. Your mission is to prevent the freighters from passing while allowing hospital ships to sail through.

The game is *Seafox*, an underwater action game adapted for the VIC-20 from the Apple and Atari versions. It is available on cartridge from Brøderbund Software. At its simplest levels, *Seafox* is challenging. At its most difficult, it's an undersea nightmare.

Seafox is a shoot-em-up game. There's plenty of action, but the pace is slower than you might be used to in a space game. This accurately reflects the medium in which the game is set—water. Your submarine, the enemy subs, the torpedoes, and mines all move through the water in a deliberate, liquidlike fashion.

You usually have time to see the dangers around you, but you don't always have time to react. The game realistically reflects the differences between maneuvering a bulky submarine in the dense undersea world and piloting a sleek spaceship in the vacuum of outer space.

Three Subs And A Chantey

As *Seafox* begins, you are supplied with three submarines, and you are treated to the opening bars of "Sailor's Hornpipe." This melody, though a bit out of tune, serves to warn you that the action is about to begin.

Your sub roams the depths while the freighters and hospital ships use the shipping lanes above. To complete your first mission, you must sink ten of the blue freighters while fending off attacks by a fleet of enemy subs.

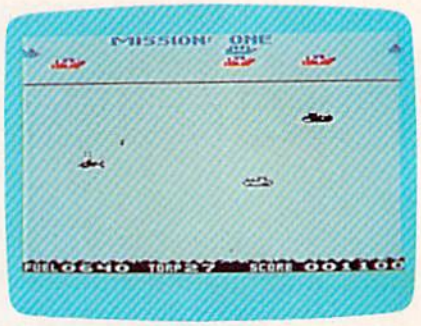
To fire at a freighter, give the joystick button a quick tap and a torpedo is launched toward the surface. If you hold down the joystick button, you launch a torpedo from your forward tubes. This weapon is used against your underwater foes, and also can be used to detonate depth charges and magnetic mines. Only one torpedo of each type can be active at a time.

Your mission is further hampered by your limited supply of fuel and torpedoes. You have 30 torpedoes and 1200 units of fuel when you begin. You burn fuel at an alarming rate and must always keep an eye out for your supply ship.

Supply Ships And Undersea Creatures

The supply ship appears at intervals at the bottom of the screen. It releases a trained dolphin which carries fuel and torpedoes. You must make contact with the dolphin's pack in order to take on new supplies. If you miss connections with the dolphin, you have barely enough fuel to hold you until the next supply ship arrives. If you fail to resupply your sub a second time, you inevitably sink to the bottom of the sea.

The sea abounds with giant clams that seem to enjoy feasting on dolphins. They gobble up your supplies as well, so it's best to refuel as quickly as possible. If you lose a dolphin to a clam,



A dolphin carrying an unclaimed supply pack swims off in Sea Fox.

you simply have to wait for the next supply ship, but if any other woe befalls your friendly dolphin, you pay dearly. Should a torpedo, mine, or depth charge destroy the undersea mammal, you have only sedconds before your entire ship is swallowed by a giant whale.

While your main mission is to sink freighters, you do receive points for blowing up enemy subs, mines, and depth charges—something which must be done anyway, just to survive.

Should one of your torpedoes hit a hospital ship, you'll do no damage. However, the weapon will bounce off the heavily armed ship and head back your way. Besides presenting you with an added peril, this also deprives you of your ability to fire another surface torpedo until the first one explodes on the sea bottom.

On To Advanced Assignments

As you begin play, your only danger is a fleet of enemy submarines. As you advance to higher levels, the complications increase. On level two, a fleet of destroyers is added to the shipping lane. These ships drop depth charges to make your life miserable. In the third level, the enemy subs begin firing torpedoes at you, and what happens

after that I've never been able to discover. The game includes five levels, and the instructions make reference to magnetic mines, so I assume they're part of the finale.

A nice feature of *Seafox* is that the depth charges, mines, enemy subs, torpedoes, etc., have the ability to home in on you. When you take evasive action, you must be evasive. It doesn't do to simply move aside and let them go past.

Seafox requires that you develop strategies, and it requires that you keep your submarine in constant motion. Take it up to get a clean shot at a freighter, descend for refueling, reverse engines to avoid an explosive charge. It takes concentration to stay alive, and you'll find that it's carelessness that most often does you in.

SOFTWARE MADE IN MUNICH

Dealer inquiries invited.

Commodore 64 owners are buying more home applications software than games, and VIC-20 owners are moving in that direction, too. This month we'll look at some home applications products which are doing well, some which are not, and a few you can expect to see in the near future.

As the home computer movement gathers momentum, it's important for people in the industry to know why consumers are buying computers. Hundreds of surveys have been conducted by market research firms, hardware and software manufacturers, and computer publications. Though the results vary, some general trends have emerged.

- Before purchasing a computer, many people claim that they want or need a home computer for educational purposes, and to simplify record keeping. Playing videogames is often low on their list of priorities.
- *After* buying a computer, the first type of software actually purchased is, in many cases, games.
- A few weeks or months down the road, the computer owner starts searching for practical applications other than entertainment.

Though this is not true for everyone, this kind of pattern emerges in the software sales we have tracked in HOTWARE. Last spring, when the Commodore 64 was fairly new to the market, and the VIC-20's price was dropping rapidly, the type of software that sold best was games. As demand increased and more home business software became available, it began to outdistance games both in unit sales and in numbers of programs being published.

Granted, the Commodore 64 is seen as more suitable than the VIC-20 as a business computer, due to its greater amount of memory. But the increase in availability of home and business applications cannot be traced solely to the 64. Equivalent software for the VIC-20 is also starting to catch up, although VIC-20 games are still selling in greater volume.

Identifying The Leaders

If we go back to the first HOTWARE list in the August 1983 issue of COMPUTE!'s GAZETTE, we see several types of home/business software represented. For the Commodore 64, it looked like this:

1. *HES Writer* (HesWare)
2. *Calc Result* (Handic)
3. *Word Pro 3 Plus/64* (Professional)
4. *HES Mon* (HesWare)
5. *TOTL Text* (TOTL Software)
6. *TOTL Label* (TOTL Software)

Three word processing programs appeared here: *HES Writer, Word Pro 3 Plus/64,* and *TOTL Text.* Many more word processing packages have been introduced since that time, and word processing continues to be one of the most popular home applications for personal computers.

Electronic spreadsheets do not seem to be as popular as other types of business software, at least among Commodore owners. *Calc Result* leads the field of the few available.

HES Mon, a machine language monitor, and *TOTL Label,* a mailing list program, also appeared on the first HOTWARE list.

New Products Join The List

Since we first published that list, several new products have entered the home applications market.

Data bases. These electronic filing systems allow you to enter records, sort them, and print out specialized reports. (See "The Data Base As A Home Information Center" elsewhere in this issue.) *Data Manager,* by Timeworks, and *Delphi's Oracle,* by Batteries Included, are examples. Data base software is beginning to appear almost as often as word processors on our HOTWARE list.

Home finance software. Though some of the personal financial records that you have to keep may be more easily done with pencil and paper, many can be simplified with your computer. *Personal Finance Assistant,* by Rainbow, and *Household Finance,* by Creative Software, have been best sellers.

Other home applications exist, but don't yet have as much software support as word processing, data management, and personal finance record keeping. They include time management, inventory control, and checkbook balancing. Software is also available to help figure out income taxes and keep track of stock portfolios. You may see more of these kinds of specialized applications as the software market continues to mature.

A Question Of Suitability

Are there home applications that do not translate well to computers? Yes, says Douglas Adams, president of Orbyte Software. "There are some things that you can do just as quickly and easily by hand," he says. "Take a recipe file, for example.... I don't know how useful a computer can be in the kitchen at this time."

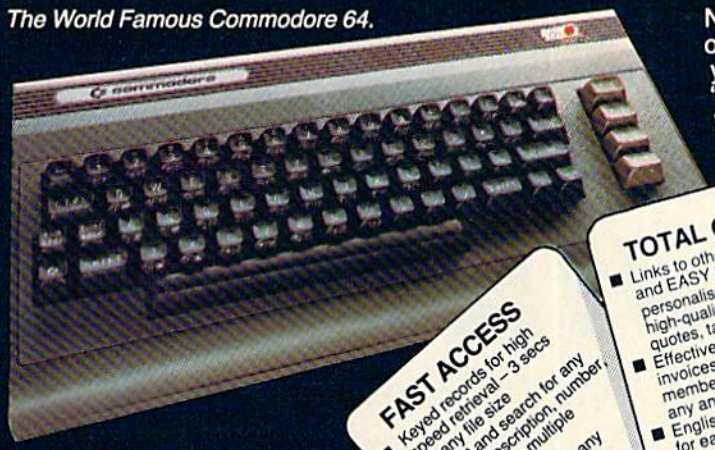
Adams believes the Commodore 64 is capable of handling more useful home financial applications, including home budgeting, data management, and word processing.

Orbyte's data base filing system, *Comfile,* allows you to access files you have created using another program (a word processor for example), even if that software was not published by Orbyte.

Strengthen your hand with Superbase 64™

The complete information control system for the Commodore 64

The World Famous Commodore 64.



No matter what your business or interest, with Superbase 64 you have a totally flexible 'record' system, as big as you want it, as fast as you need it.

Create your own formats, enter your records, change layouts and datafields.

Superbase gives you unrivalled control in home or office, business or professional practice, with a range of features including:

YOUR OWN RECORDS
- Design **your** layout using text, numeric, calculated result, date, linking and key fields
- Record size up to 1100 characters spread over up to 127 items
- Number of records limited **only by your equipment** – can be thousands
- As many databases as you want – each with up to 15 files
- Learn fast through built-in HELP screens – then add your own notes

FAST ACCESS
- Keyed records for high speed retrieval – 3 secs for any file size
- Select and search for any name, description, number, date, etc. in multiple combinations
- Sort records into any order
- Display selections or generate printed reports
- Browse through records matching on any criteria

TOTAL CONTROL
- Links to other programs and EASY SCRIPT for personalised mailings, high-quality letters, quotes, tables, etc.
- Effective management of invoices, addresses, stock, membership, appointments – any and every kind of record
- English like commands for easy conversational programming, plus built-in BASIC

DATABASE MANAGEMENT
- Easy to understand menus
- Add or amend fields, or alter length – no file rebuilding needed
- Update files with automatic batch processing option
- Calendar arithmetic for effective time management
- Display quantities, values, totals, as you enter them. Formulae for on-screen result calculation.

OFFICIALLY APPROVED BY COMMODORE

commodore

"People are looking for versatility in home business software," says Adams. "If I can enhance another company's software with my own, that's great."

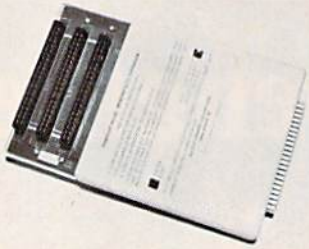
Know Your Needs Before You Buy

"The Commodore 64 owner has a lot of variety at this point in terms of software for home applications," Adams says. "But many people that are buying that kind of software don't know what the programs are about. Also, this software tends to be more expensive than games. It's very important to make sure the software you're buying will truly meet your needs."

Correction

Two software manufacturers were incorrectly identified in January HOTWARE. *Temple of Apshai* and *Crush, Crumble and Chomp* are products of Epyx Software, not HesWare. The Commodore 64 version of *Choplifter* is published by Broderbund Software. The Commodore 64 version of *Shamus* is published by Synapse Software.

VIC® 20 OWNERS



Fulfill the expansion needs of your computer with the

RAM-SLOT MACHINE

This versatile memory and slot expansion peripheral for the Commodore Vic-20 Computer consists of a plug-in cartridge with up to 24KBytes of low power CMOS RAM and 3 additional expansion slots for ROM, RAM and I/O. The cartridge also includes a reset button (eliminates using the power-on switch) and an auto start ROM selection switch.

#RSM-8K, 8K RAM + 3 slots..... **$ 84.50**
#RSM-16K, 16K RAM + 3 slots .... **$ 99.50**
#RSM-24K, 24K RAM + 3 slots **$119.50**

We accept checks, money order, Visa/Mastercard. Add $2.50 for shipping, an additional $2.50 for COD. Michigan residents add 4% sales tax. Personal checks—allow 10 days to clear. * Trademark of Commodore.

BLIZTEXT – SUPER WORDPROCESSOR for the Commodore-64

— ON SALE NOW! —

- Fully screen-oriented, up/down, left and right scrolling — Upper and lower case
- More than 70 commands
- Full I/O compatibility with Commodore peripherals Upper and lower case
- Works with practically every printer on the market, user definable printer control commands
- INCLUDE command allows handling large files on up to 4 diskettes or on cassette.
- Build in terminal software for electronic mail and networking. Telecommunications mode, upload and download, save on disk or cassette.
- Dynamic formatting, Imbedded commands
- Single keystroke for disk directory and error channel
- Program comes on disk or cassette
- Double line spacing, left and right margin justification, centering, page numbering, and practically everything one expects from a good wordprocessor.

Order #4965 $89.00
Manual only (62 pages) $29.95

MACROFIRE - Editor/Assembler for the Commodore-64

ON SALE NOW
AVAILABLE IMMEDIATELY

One outstanding tool, consisting of 3 powerful elements combined into one efficient program!

1.) Fully screen-oriented Editor (more than 70 commands)
2.) Very fast assembler with macro capability
3.) Machine Language Monitor

Assembly can be started from the editor. Translates in 3 passes. More than 1,000 lables, screen oriented/no line numbers, scrolling, includes disk files.
Practically everything the serious machine language programmer needs everyday!

Manual only $19.95
Order #4963 $89.00

THE GREAT BOOK OF GAMES, VOL.I,

by Franz Ende
46 programs for the Commodore 64
Introduction to graphics and sound. How to program your own games. Walking pictures, animation, high resolution graphics, programming tips and tricks, hints and useful subroutines for the beginner and advanced programmer. This book is a MUST for every C-64 owner.
Come and get it — It's yours for only $ 9.95

C. REGENA

Preventing An Input Crash

This month we'll look at a few ways to "dummy-proof" (maybe a better term is "user-proof") your programs. In other words, how do you write your programs so that other people can use them and not get error messages? How do you prevent your program from "crashing" with a fatal error?

Any program that another person will use should have "user-friendliness" built in. When you work on a program you have written yourself, you know what constraints the program has and what types of input are necessary. If you want other people to use your program, they need to be able to do so without your constant help.

The GET Statement

The most likely place for errors is when the user must enter something—when the program requires a response. You may use either the GET or INPUT statement to put information into the computer. If you allow for yes and no or multiple-choice answers requiring one keystroke instead of a typed answer as the user input, there is less chance for error. To detect which key is pressed, use GET.

Here is a sample:

```
100 PRINT "START"                    :rem 240
200 PRINT "TRY AGAIN? (Y/N)"          :rem 40
210 GET A$                           :rem 216
220 IF A$="Y" THEN 100                :rem 34
230 IF A$<>"N" THEN 210               :rem 87
```

Line 200 prints the question asking for a response. Line 210 scans the keyboard and gets a key when it is pressed. Line 220 says if the key pressed was Y, then transfer to line 100. Line 230 says if the key pressed is not N (or if no key is pressed), then go back to the GET statement, otherwise continue. You can see that only the Y or N keys are accepted.

Here is another example offering a choice of several items.

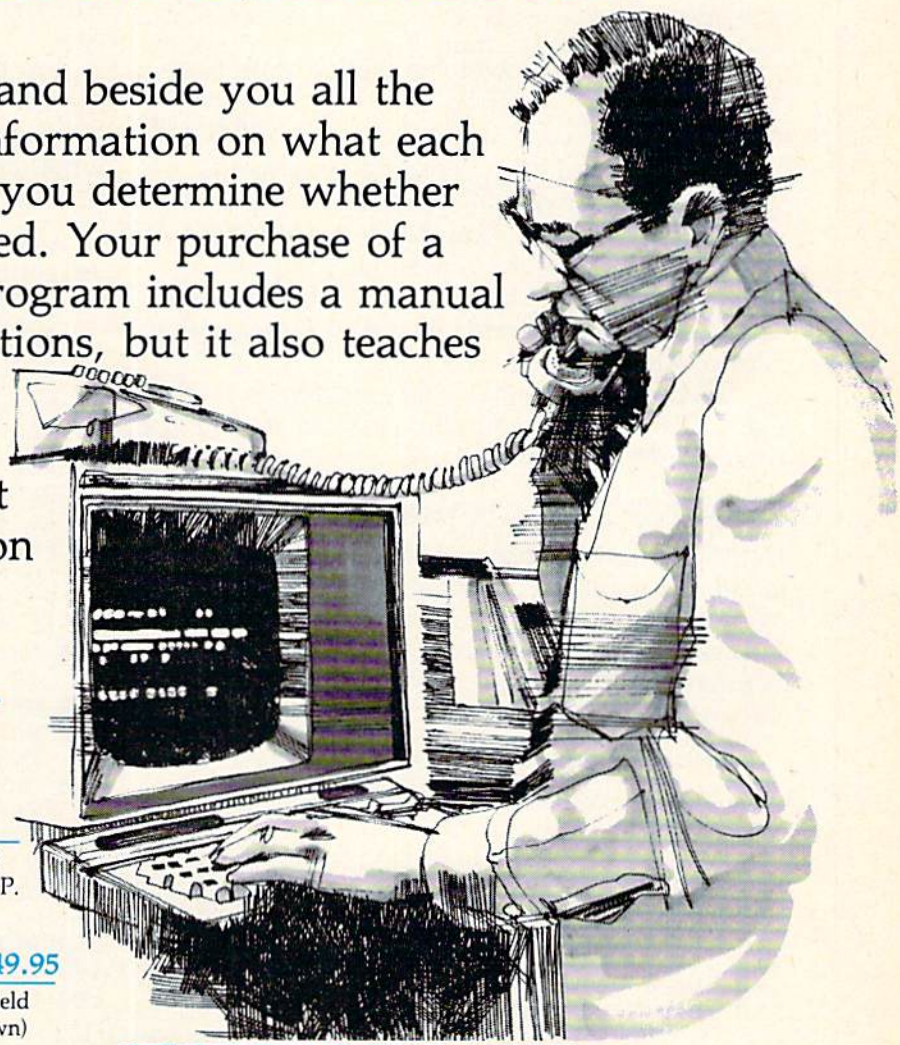
```
100 PRINT "{2 DOWN}CHOOSE:"          :rem 127
110 PRINT "1 FIRST GAME"              :rem 54
120 PRINT "2 SECOND GAME"            :rem 108
130 PRINT "3 THIRD GAME"              :rem 45
140 PRINT "4 END PROGRAM{DOWN}"      :rem 154
150 GET A$:IF A$="" THEN 150          :rem 79
160 IF A$<"1" THEN 150                 :rem 1
170 IF A$>"4" THEN 150                 :rem 7
180 ON VAL(A$) GOTO 1000,2000,3000,4000
                                     :rem 150
1000 PRINT "FIRST GAME"               :rem 52
1010 GOTO 100                        :rem 140
2000 PRINT "SECOND GAME"             :rem 105
2010 GOTO 100                        :rem 141
3000 PRINT "THIRD GAME"               :rem 41
3010 GOTO 100                        :rem 142
4000 PRINT "END PROGRAM{2 DOWN}"     :rem 166
4010 END                             :rem 156
```

Lines 100–140 print the menu screen. You could use an INPUT statement to require the user to choose a number and then press RETURN, but the user would need two keystrokes and could enter many characters other than the four numbers and cause all kinds of errors. A better approach is to use GET (line 150). Here we're scanning the keyboard for a key A$. If A$="" (that's two double quote marks with nothing between), no key has been pressed. Lines 160 and 170 indicate that the key pressed must be from 1 to 4.

Line 180 is an example of an ON-GOTO statement, which causes the program to branch depending on the value of A$. Lines 160–170 check to make sure the key pressed will be a number from 1 to 4, so the ON-GOTO statement needs four line numbers. If the value of A$ is 1, the program goes to line 1000; 2 goes to 2000; 3 goes to 3000; and 4 goes to 4000. An ON-GOTO statement is often the most efficient way to transfer control without using several IF-THEN statements. The rest of this sample program illustrates the program flow—of course, you would write actual program segments for the options.

Mirage Concepts stands apart because our customers don't stand alone!

Mirage Software For Commodore 64™...



At Mirage Concepts, we stand beside you all the way. We supply detailed information on what each program will do, and help you determine whether or not it will meet your need. Your purchase of a quality Mirage Concepts program includes a manual which not only lists instructions, but it also teaches you how to use it. For answers to your special questions, technical support personnel are standing-by on a toll-free basis.

WORD PROCESSOR, $89.95

- 40/80 Columns Without Additional Hardware
- 100% Machine Language • Over 70 Commands
- Includes Spelling Checker • Interfaces to Database

DATABASE MANAGER, $89.95

- 100% Machine Language • Free Form Design • Sort On Any Field • Calculated Fields • Interfaces to W.P.
- Record Size = 2,000 Characters

ADVANCED REPORT GENERATOR, $49.95

- Companion to Database • Totals and Subtotals • Field Matching • Expanded Reports • Sorting (Up & Down)
- Calculated Fields

TM—Commodore 64 is a Registered Trade Mark of Commodore Electronics, Ltd.

Freezing The Program

Another use for GET is to "freeze" the program as long as the user wishes. For example, perhaps you have an instruction screen. If the user has seen the program before, he or she may wish to skip over the instruction screen quickly and not have to wait a certain amount of time. A first-time user may need plenty of time to read the screen. A GET loop can freeze the screen until the user presses a certain key. Another use may be to hold a graphics screen until the user is ready to go on. Here is a sample:

```
100 PRINT "PRINT INSTRUCTIONS HERE."
                                    :rem 246
110 PRINT "{DOWN}PRESS F1 TO CONTINUE."
                                    :rem 174
120 GET A$                          :rem 216
130 IF A$<>"{F1}" THEN 120          :rem 141
140 PRINT "{DOWN}PROGRAM WOULD CONTINUE."
                                    :rem 173
150 END                             :rem 109
```

To type line 130, press the f1 key (the top function key) between the quote marks. You will see a printed symbol. Line 120 detects the key pressed. Line 130 determines that if the key pressed is not the f1 key, the program loops back to line 120. The program will not continue until f1 is pressed.

If you are writing a game program, you can use GET to detect the function keys or arrow keys, then branch appropriately.

The INPUT Statement

INPUT is unavoidable in many cases. The INPUT statement may ask for either a number or a string. You can use a "prompt" with INPUT so the user knows exactly what to enter. PRINT a message before the INPUT value. It is also wise to ask for only one item at a time.

```
200 INPUT "NAME AND ADDRESS";N$,A$
```

may be more difficult to use than the following series of questions:

```
200 INPUT "LAST NAME";L$            :rem 102
210 INPUT "FIRST NAME";F$           :rem 181
220 INPUT "STREET ADDRESS";A$       :rem 229
230 INPUT "CITY";C$                  :rem 68
240 INPUT "STATE";S$                :rem 157
250 INPUT "ZIP CODE";Z               :rem 14
```

This program asks for exactly what is needed, one entry at a time. The first example may be unclear as to how data should be entered.

In more technical programs, you may assume some knowledge on the part of the user in inputting values for calculations. However, to avoid a fatal program crash, you may wish to check limits of numbers entered. Problems could arise with very large numbers, negative numbers, and zero (especially if fractions are involved or if there is a possible division by zero).

The following program for parallel resistance illustrates how input values can be tested. First the user is asked how many resistors there are in the calculation (only three are shown, but a number up to nine may be chosen). The GET function is used since the answer is one digit. Line 150 also makes sure the key pressed is a number from 2 to 9.

The formula for total resistance of several resistors in parallel is

$$\frac{1}{R_t} = \frac{1}{R_1} + \frac{1}{R_2} + \frac{1}{R_3} \ldots$$

Since the equation involves fractions, we need to be careful of a division by zero. Line 200 makes sure that each resistance entered is greater than zero.

At the end of the program the user is given the option to try another problem or end the program. Again, the GET function is used to see whether the user presses 1 or 2, and all other keys pressed are ignored.

```

230 NEXT                           :rem 212
240 PRINT "TOTAL RESISTANCE ="      :rem 25
250 PRINT 1/T                      :rem 216
260 PRINT "{2 DOWN}{GRN}PRESS:"    :rem 112
270 PRINT " 1 ANOTHER PROBLEM"     :rem 189
280 PRINT " 2 END PROGRAM"         :rem 140
```

Food for Thought.

Real computing at appetizing prices.

Inventory 64.™ An easy-to-use menu-driven program that lets you track complete and complex inventories. Pinpoint locations, vendors, units of measure. Update prices, reorders, sales, entire stocks. A powerful tool for your home computer at only $29.95*, on disk.

64 PAK.™ A self-teaching sampler package of 10 menu-driven programs. Ideal as an introduction to computing. Or compute your life expectancy, your mortgage payments, even learn the language of the deaf, plus a lot more. Only $24.95*, on disk.

PractiFile.™ A fully professional file manager for your Commodore. PractiFile can handle mailing list entries by the thousands. You can change records, numbers, methods of filing, and a great deal more. Plus, it's easy to use. Only $54.95*, on disk.

PractiCalc™ 64. The most powerful spreadsheet available for a home computer—at the least cost. Track investments, inventories, expenses. Project profits. Make charts. Keep mailing lists. Sort alphabetically or numerically, instantly. An incredible value at $49.95*, tape; $54.95*, disk.

Total Health.™ The fun way to keep fit. Stay on top of your daily intake and outgo of calories. Balance your daily diet and graph your progress—all tailor-made to your body, past, present, and future. It's like having a health spa in your home for only $24.95*, on disk.

Now you can do real, honest-to-goodness computing at computer-game prices. Computer Software Associates brings you hard-working software that makes your work easy. (While it's easy on your budget.) All programs are easy to work with right on the screen, from self-teaching instant software that tracks your vital statistics to potent programs to track inventories and profits.

Of course, if it's games you want, we've got them too. But if you're looking for home computer power with real brainpower, look no more. Now you can play for keeps.

One more program is presented here to illustrate the uses of GET and INPUT. "Averages" is an educational program that instructs the user on how to calculate the average of several numbers, then random problems are given with multiple-choice answers.

This program uses DEF FNF(X) to define a function that will choose a random integer from 1 to X. This saves typing the function and saves memory when a random integer is needed later in the program. The GET function is used after menu screens are printed and at various places in the program to wait before continuing the program. INPUT is used in the sample problems to receive a numeric answer. GET is used to receive the answer for multiple-choice questions. Random numbers are used in the problems and also in determining which of three problems will be printed. Lines 78–86 in the VIC version and 900–1050 in the 64 version determine the multiple-choice answers.

The VIC and 64 versions are essentially the same, but have different line numbers (and combined lines in the VIC version). In the 64 version, the first line (POKE 53281,1) changes to blue printing on a white screen. The VIC version combines lines to save memory, but if you have questions about program flow, the 64 version may be easier to read.

When you are typing the VIC version, leave out all unnecessary spaces. If you prefer to save typing time, you may have a copy of the program by sending me $3, a blank cassette, and a self-addressed, stamped envelope. Please be sure to specify the name of the program and which computer version. Mail to:

C. Regena
P.O. Box 1502
Cedar City, UT 84720

See program listings on page 170.

IT'S TAX TIME

DO YOUR INCOME TAX THE EASY WAY

Just LOAD and RUN. The program will prompt you for all INPUTs, then compute your taxes or refund. It will optionally print out directly on the proper form or LIST on the screen by form numbers. The program is thoroughly tested and documented. Instruction book forms are included.

SAVE YOURSELF TIME AND MONEY, ORDER TODAY

RICHARD MANSFIELD, SENIOR EDITOR

Double Decker

The action begins. We've filled color RAM, drawn the screen borders, and set up some random enemies. Now we're ready to add some arcade action to our all-machine-language game. (The entire game we've built so far is contained in the BASIC loader, Programs 2 and 3.)

The section to be constructed this month will control the player, accepting input from the keyboard and moving a paddle back and forth on the screen. It's so fast in machine language (ML) that a delay loop has to be added so we can see the paddle move. Without this delay, the paddle simply reappears on the other side of the screen when you press a key.

Let's look at the program flow of the 64 version disassembly (Program 1); it's functionally identical to the VIC version. As always, the first thing to do is to set up some preliminary information—the equivalent of assigning values to variables in BASIC. At 49249, the first address in the program (or first *line*, if you prefer), we LoaD the Accumulator with 169 and store it at 251, a zero page location. Then, we do it again, putting 7 into 252. Recall that the 6502 chip looks at two-byte addresses in a peculiar way: the higher one in memory (at 252) is going to be multiplied by 256. Then the other one (at 251) is added to that, to give us the address we're after. So, by adding 169 to (7 × 256), we get 1961, an address within the screen RAM where we want our paddle to start off.

Printing The Paddle

Notice that we will be referring to this two-byte address pointer several times in the program: lines 49279, 49283, 49296 and so on. It will always hold the current position of the paddle on the screen. Anyway, we've set up our paddle position pointer, so now we JSR (Jump to SubRoutine) at 49345, which prints the paddle on the screen (wherever it's supposed to be, governed by what's in our pointer at 251). We load Y with 5, load A with 120 (the screen POKE value of our paddle symbol), store A using the Indirect Y addressing mode, DEY (reduce Y by one), test to see if Y is equal to zero yet (BNE), and, if not, branch back to 49349, the start of our print paddle subroutine's loop. When we've POKEd all five paddle characters into the right position on screen, we RTS (ReTurn from Subroutine).

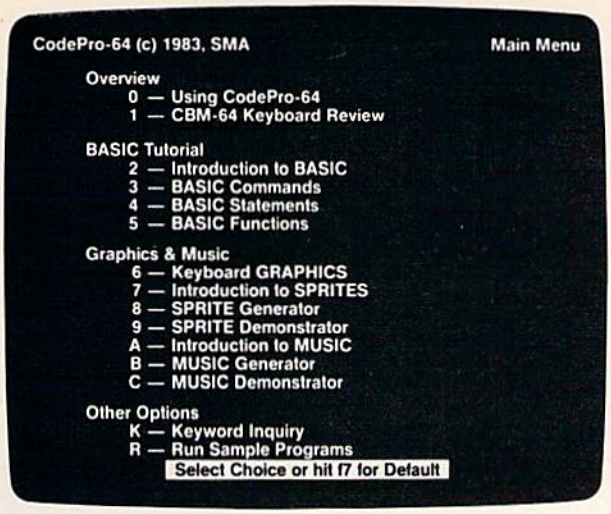
Following that RTS, we fly back to 49260, only to bounce away again to another subroutine, our delay. This is a do-nothing subroutine; it just takes up time by LoaDing the Y register with zero (line 49355), counting down with DEY, until it goes from 255 down to zero again and then we RTS. If something starts with zero and is decremented (lowered by one, like the DEY, DEX, or DEC instructions), it clicks down to a 255, then 254, and so on down. Remember that zero clicks down into 255 in these situations; it doesn't freeze at zero. We can find out when it hits zero by using BNE. BNE always branches *unless the most recent action caused a zero.* (Many instructions will alert BNE to zero: LDA 155 would set off a branch, a BNE, if address 155 contained anything other than zero.)

Which Key Pressed?

Once finished with the delay, we return to 49263 and load the accumulator with whatever number is currently in address 197. That's a special address in our computers: It always holds the value of the key currently being pressed. Try this in BASIC:

```
FOR I=1 TO 5000 : ? PEEK (197);: NEXT
```

Then press some keys. You'll notice that each key has its own value. This is an easy way to get input from the user. For our game, we're just going to have the user move a paddle back and forth so we need to test for only two direction



A new concept in interactive visual learning.

CodePro-64™

Now you can learn to code in BASIC and develop advanced programming skills with graphics, sprites and music—*visually*. You learn by interacting with CodePro-64, a new concept in interactive visual learning.

SEE PROGRAM EXECUTION

Imagine actually seeing BASIC statements execute. CodePro-64 guides you through structured examples of BASIC program segments. You enter the requested data or let CodePro-64 do the typing for you. (It will not let you make a mistake.)

You step through and actually see the execution of sample program statements by simply pressing the space bar. CodePro-64 does the rest. You see statements with corresponding *graphics* and variable value displays.

EXTENSIVE TUTORIAL

CodePro-64's extensive tutorial guides you through each BASIC command, program statement, and function. You get clear explanations. Where appropriate, you invoke BasicView to see examples execute and watch their flow charts and variables change.

By seeing graphic displays of program segment execution you learn by visual example. You *learn faster and grasp programming concepts easier* with CodePro-64 because you immediately see the results of your input.

You control your learning. You can go through the tutorial sequentially, or return to the main menu and select different topics, or *use keywords* to select language elements to study. You can page back and forth between screens within a topic at the touch of a function key.

Once you have practiced and mastered the BASIC language elements you move on to more advanced concepts. You learn about sprite and music programming.

SPRITE GENERATOR & DEMONSTRATOR

CodePro-64's sprite generator lets you *define your own sprites* on the screen. You learn how to define sprites and what data values correspond to your sprite definitions. (You can then save your sprite data to a diskette file for use in your own programs.) You can *easily experiment* with different definitions and make changes to immediately see the effects.

We also help you learn to program with sprites by giving you a *sprite demonstrator* so you can see the effect of changing register values. You can experiment by moving your sprite around in a screen segment, change its color and see the effects of your changes. You learn by visual examples.

MUSIC GENERATOR & DEMONSTRATOR

Our *Music Generator* and *Music Demonstrator* will provide hours of instruction and creative enjoyment. From the beginning of your instruction you can *compose simple tunes* on the screen using the generator. Once you've completed a composition you can *save the tune* and its associated SID parameters to a diskette file. Our music sample program can be used alone or incorporated into your own programs to *read the saved music file* and replay your songs.

Our music demonstrator *lets you experiment* with various combinations of music programming parameters and hear the results. All you do is enter rows of SID parameters on the screen to create a particular sound. Then you *hear each sound by playing the "keyboard organ"* in real time as you shift from row to row of SID parameters. By seeing your input and hearing the result you quickly learn how to create new musical sounds and special sound effects.

Whether you're a beginning programmer or an experienced professional, CodePro-64 will help you improve you Commodore 64 programming skills. We're sure because CodePro-64 was developed by a team of two professionals with *over 25 years* of software development experience.

CodePro-64 is a professional quality educational program for the serious student of personal computing. And it's *fully guaranteed*. Order yours today.

OUR GUARANTEE

We guarantee your satisfaction. You must be satisfied with CodePro-64 for the Commodore-64. Try it for 10 days and if for any reason you are not satisfied return it to us (undamaged) for a full refund. *No risk.*

HOW TO ORDER

Order your copy of CodePro-64 today by mail or phone. Send only $59.95 plus $3.00 shipping and handling to:

keys. Let's use the 1 and 3 keys, for left and right movement. Try pressing 1. You'll see 56's on screen. (VIC gives 0.) Press 3 and you'll get 8's. (VIC gives 1.)

Since this is an all-ML game, we'll need a way to get out of it, to return to BASIC. For that, we'll use the 0 key as an escape. When you press it, you'll get 35 as your value. So, lines 49265 through 49275 simply compare what we found in address 197 against 56, 8, and 35 and branch to the appropriate subroutines further down in the program. If we got some other value, line 49277 sends us up to another delay and then another try for a pressed key.

All of this multiple comparing should remind you of the ON-GOTO command in BASIC. This is ML's version of that common computer technique for branching to several alternative actions.

To move the paddle left (the routine starting at 49279), we've got to first check to see if we *can* move any further left. Obviously, we don't want to move the paddle into the border of our screen and come popping out the other side. So we DEC 251 temporarily, to check if the next character to the left of our paddle is a blank (character #32). If not, it must be a wall, so we're sent back to our get-a-keystroke routine at 49260.

However, if we find a blank, we can go ahead and redraw the paddle one space to the left of its current position. So, at 49305, we INC the pointer to restore it to its correct value. (Recall that we DECed it to check for a blank.) Then we want to blank out the paddle character six over from the current address (to get rid of the rightmost paddle character). Load Y with #6, load A with the blank character, #32, and store A.

These next four lines are an important ML technique: double DEC. We need to lower our pointer address by 1 because we're sliding the whole paddle over 1 to the left on screen. We can't just DEC 151 because we might be crossing a page boundary (256) and need to *also lower 152*, the more significant byte of the two-byte pointer. Remember that we said LDA would affect a BNE instruction? We LDA the lower, less significant byte. If it's a zero, we "fall through" the BNE to address 49317 and also lower 252. If not zero, we branch to 49319 and just lower 151. Notice that

EUREKA!

That's what we said when our new "invention" solved all our VIC-20™ and Commodore-64™ programming problems

We had a problem. So we invented PC-DocuMate™ to solve it. The problem was how to quickly master the VIC-20 and CBM-64 keyboards and easily start programming in BASIC on our new personal computers. First we went through the manuals.

INCONVENIENT MANUALS

The user's guide was a nuisance and the programmer's reference manual was just plain inconvenient to use. We found the control key combinations confusing and the introduction to BASIC to be too "basic" for our needs. We needed a simple solution to our documentation problems.

So we decided to surround the keyboard of each PC with the information we wanted. We decided to print whatever we needed on sturdy **plastic templates** which would fit the keyboard of either the VIC-20 or Commodore 64.

SIMPLE SOLUTION

This was the simple solution to our problem. Now we could have the essential information right at our fingertips.

On the left side and top of the templates we put **BASIC** functions, commands, and statements. On the lower left we used **key symbols** to remind us of how to use SHIFT, RUN/STOP, CTRL and the "Commodore" key. Over on the bottom right side we put some additional keys to help remember about CLR/HOME and RESTORE. But we were still a little confused.

STILL CONFUSED

We found we were confused about music programming, color graphics, and sprites. On both the VIC-20 and the CBM-64 templates we carefully organized and summarized the essential reference data for **music** programming and put it across the top—showing notes and the scale. All those values you must POKE and where to POKE them are listed.

Then to clarify **color graphics** we laid out screen memory maps showing character and color addresses in a screen matrix. (We got this idea from the manuals.)

For the VIC-20 we added a complete memory address map for documenting where everything is in an expanded or unexpanded VIC.

For the Commodore 64 we came up with a really clever summary table for showing almost everything you ever need to know for **sprite** graphics.

GETTING EASIER

Now we had organized the most essential information for our VIC and 64 in the most logical way. BASIC, music, color graphics, and sprites all seemed a lot easier. Our initial problem was solved by PC-DocuMate™.

But we have a confession to make.

WE CHEATED

We had solved this kind of problem before. In fact, many times before. You see, we at SMA developed the original PC-DocuMate for the IBM PC. We've made templates for IBM BASIC and DOS, for WORDSTAR™, VISICALC™ and other best-selling software packages for the IBM PC.

So we knew we could invent another PC-DocuMate™ to solve our problems with the VIC-20 and Commodore 64. Now our solution can be yours and you can join the thousands of satisfied users of our template products.

Take advantage of our experience and success with PC-DocuMate templates. Get one for your personal computer.

SOME SPECIFICS

Our templates for the VIC and 64 are made from the same high quality **non-glare** plastic as the more expensive IBM PC versions.

The templates are an attractive **gray** color and are imprinted with a special black ink which bonds permanently to the plastic. They are precision **die-cut** to fit your keyboard.

Unlike some other products we've seen in this category, PC-DocuMate templates are professionally and expertly designed. And they are fully guaranteed.

OUR GUARANTEE

We guarantee your satisfaction. **You must be satisfied** with your PC-DocuMate for your VIC-20 or CBM-64. Try it for 10 days and if for any reason you are not satisfied return it to us (undamaged) for a full refund. **No risk.**

SOLVE YOUR PROGRAMMING PROBLEMS WITH PC-DocuMate™

Order your PC-DocuMate today (by phone or mail) and solve your VIC-20 or CBM-64 programming problems. Send only **$12.95** and specify which computer you have. We pay for shipping and handling. Use the coupon below or call **919-787-7703** for faster service.

falling through the BNE has the effect of lowering both bytes. Finally, we JSR to the paddle drawing routine and then JMP (jump) back up to our main loop of the program.

The method for redrawing the paddle to the right is quite similar, the primary distinction being a double increment instead of double DEC (see lines 49333 through 49337).

If you have any comments or questions, please send them to: Machine Language For Beginners, P.O. Box 5406, Greensboro, NC 27403.

ML Mailbag

Here's a letter we recently received:

> *In your article "Safe Places" (December 1983), you were starting an ML game. And you started at address 12288 with the 8K expansion. I have VICMON which is on tape and so I need the 8K for it. Is there another place to put this game? I was thinking of putting it in the cassette buffer starting at 828.*
>
> *Jeff Cutcher*

VIC memory can be a problem. You might want to use the Simple Assembler (November 1983) in a VIC with 8K expansion memory to create this ML game. Shorter ML routines can be stashed away into the cassette buffer if you aren't using the cassette drive at the time. However, the ML game has outgrown the space available in this buffer with the addition of this month's paddle routines.

To summarize, both VIC and 64 have a few safe zones in zero page: address 2 is unused by the computer, addresses 163–177 are largely used by the cassette operating system and can be employed when you're not using cassette, and 251–252 are free (we're using them this month to hold our paddle pointer).

Above zero page, you can use 679–767 and 828–1019 (the cassette buffer). On the 64 only, there is a nice zone from 49152–53247. To make enough space for the game on the VIC, we first POKE 56,48 (to keep BASIC below this area) and then can use addresses 12288 and above.

See program listings on page 172.

TELSTAR 64

Sophisticated Terminal Communications Cartridge for the 64.

PFO 10D 00D CP D1 D2 BELL 12:30:00 10:14:36
(TELSTAR's Status Line)

Don't settle for less than the best!

- Upload/Download to/from disk or tape.
- Automatic File Translation.
- Communicates in Industry Standard ASCII.
- Real-Time Clock plus Alarm Clock.
- Line editing capability allows correcting and resending long command lines.
- 9 Quick Read functions.
- Menu-driven.
- Similar to our famous STCP Terminal package.
- Works with Commodore Modems and supports auto-dialing.

The best feature is the price — **only $49.95** (Cartridge and Manual)

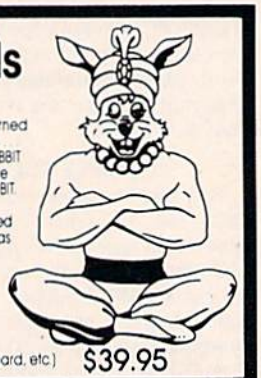
Machine Language Monitor Cartridge
for the CBM 64

More than 20 commands allow you to access the CBM 64's Microprocessors Registers and Memory Contents. Commands include assemble, disassemble, registers, memory, transfer, compare, plus many more.

Someday every CBM 64 owner will need a monitor such as this.

Cartridge and Manual — **$24.95**

8K in 30 Seconds
for your VIC 20 or CBM 64



If you own a VIC 20 or a CBM 64 and have been concerned about the high cost of a disk to store your programs on worry yourself no longer. Now there's the RABBIT. The RABBIT comes in a cartridge, and at a much, much lower price than the average disk. And speed . . . this is one fast RABBIT. With the RABBIT you can load and store on your CBM datasette an 8K program in almost 30 seconds, compared to the current 3 minutes of a VIC 20 or CBM 64, almost as fast as the 1541 disk drive.

The RABBIT is easy to install, allows one to Append Basic Programs, works with or without Expansion Memory, and provides two data file modes. The RABBIT is not only fast but reliable.

(The Rabbit for the VIC 20 contains an expansion connector so you can simultaneously use your memory board, etc.)

$39.95

MAE NOW THE BEST FOR LESS!

$59.95

For CBM 64, PET, APPLE, and ATARI

Now, you can have the same professionally designed Macro Assembler/Editor as used on Space Shuttle projects.

- Designed to improve Programmer Productivity.
- Similar syntax and commands - No need to relearn peculiar syntaxes and commands when you go from PET to APPLE to ATARI.
- Coresident Assembler/Editor - No need to load the Editor, then the Assembler, then the Editor, etc.
- Also includes Word Processor, Relocating Loader, and much more.
- Powerful Editor, Macros, Conditional and Interactive Assembly, and Auto - zero page addressing.

Still not convinced; send for our free spec sheet!

Making More Readable Listings

Brent Dubach

Have you ever tried to find a key subroutine or loop in a long BASIC listing? If you have, you know how tedious it can be. This tutorial demonstrates some very sneaky BASIC editing techniques that you can use for more readable listings. For the VIC and 64.

A few carefully chosen variable names can help make the difference between a readable program and an unintelligible mess. But BASIC does not make these choices easy. Did you ever want to use a BASIC keyword like TO or FN within a variable name, such as LET TOP = 10 or PRINT FN$?

Commodore BASIC won't allow it. But by fooling a couple of BASIC routines, you can use these illegal variable names and do even more to improve the appearance of your listings. Let's see how to use this technique and then consider what makes it work.

Illegal Variable Names

The key is to use graphics characters where they normally don't belong. You're probably used to using a graphics character as the last character in the abbreviation of a BASIC keyword. For example, if you type a P followed by a SHIFTed O, BASIC understands that you intend an ordinary POKE command. But let's see how BASIC will handle a graphics character in the middle of a variable name.

```
10 LET NJUMBER = 50
20 PRINT NJUMBER
```

To get the graphics character between N and U, type a SHIFTed J. You can use any graphics character that will not result in an abbreviation of a BASIC keyword. (For example, an N and a *SHIFT*ed E combine to form the keyword NEXT.)

Now LIST the program

```
10 LET NUMBER = 50
20 PRINT NUMBER
```

and RUN it.

```
50
READY.
```

Nothing too impressive here. All we have is a program that LISTs and RUNs exactly as it would if we left out the graphics characters. Now let's do something that is downright illegal.

```
10 LET TOP = 65
20 LET BOTTOM = 90
30 PRINT BOTTOM - TOP + 1
```

If you enter and RUN this program, you'll get a syntax error. The sequence *TO* may not appear anywhere within a variable name as it does here in *TO*P and in BOT*TO*M. It is reserved for use as a BASIC keyword only (as in FOR J = 1 TO 5).

Let's try to fool BASIC. We'll place a graphics character (the SHIFTed J) just before the offending last character that completes the BASIC keyword—that is, before the O in each TO.

```
10 LET TJOP = 65
20 LET BOTTJOM = 90
30 PRINT BOTTJOM - TJOP + 1
```

Here's what you see when you LIST it:

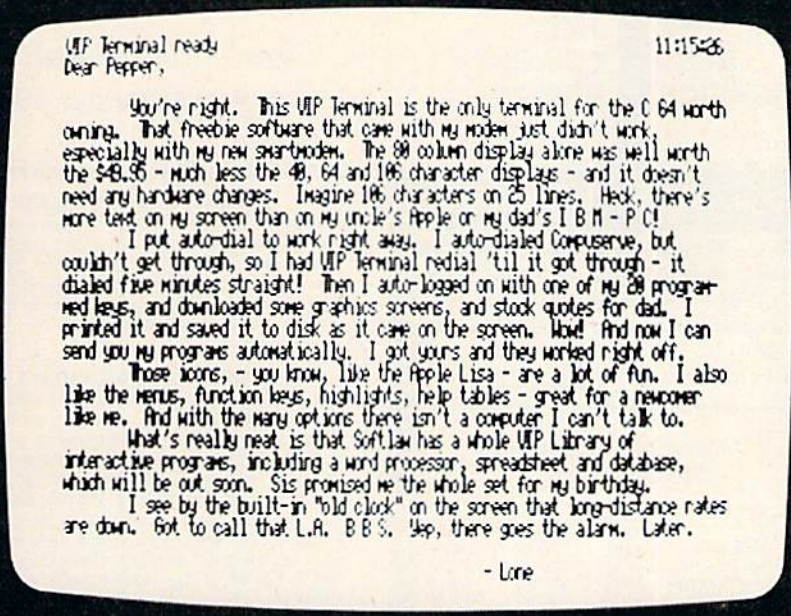
```
10 LET TOP = 65
20 LET BOTTOM = 90
30 PRINT BOTTOM - TOP + 1
```

These lines appear identical to the illegal program you entered a moment ago. Now RUN the program:

```
26
READY.
```

It works, with an illegal variable name in every

80 Column Smart Terminal
For Your C64 Without Any Hardware Change!



VIP Terminal ready 11:15:56
Dear Pepper,

You're right. This VIP Terminal is the only terminal for the C 64 worth owning. That freebie software that came with my modem just didn't work, especially with my new smartmodem. The 80 column display alone was well worth the $49.95 - much less the 40, 64 and 106 character displays - and it doesn't need any hardware changes. Imagine 106 characters on 25 lines. Heck, there's more text on my screen than on my uncle's Apple or my dad's I B M - P C!

I put auto-dial to work right away. I auto-dialed Compuserve, but couldn't get through, so I had VIP Terminal redial 'til it got through - it dialed five minutes straight! Then I auto-logged on with one of my 28 programmed keys, and downloaded some graphics screens, and stock quotes for dad. I printed it and saved it to disk as it came on the screen. Wow! And now I can send you my programs automatically. I got yours and they worked right off.

Those icons, - you know, like the Apple Lisa - are a lot of fun. I also like the menus, function keys, highlights, help tables - great for a newcomer like me. And with the many options there isn't a computer I can't talk to.

What's really neat is that Softlaw has a whole VIP Library of interactive programs, including a word processor, spreadsheet and database, which will be out soon. Sis promised me the whole set for my birthday.

I see by the built-in "old clock" on the screen that long-distance rates are down. Got to call that L.A. B B S. Yep, there goes the alarm. Later.

- Lone

VIP TERMINAL™

They're right! To start with the best you've got to have the **VIP Terminal!**

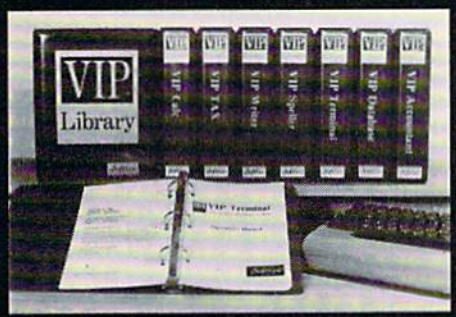
- **Built-in 40, 64, 80 and 106 columns**
- **Word wrap for a formatted display**
- **Talk to any computer**
- **Use any modem and printer**
- **Written in fast machine code**
- **15 entry phone directory**
- **20 programmable keys**
- **Automatically dial, redial, upload, download and log-on**
- **Professional 96 character ASCII display**
- **128 character ASCII keyboard**
- **Simultaneous on line printing and saving of files to tape and disk**
- **Use and save files as big as your disk!**
- **E Mail & E-COM Compatible**

Get yours NOW! **$49.95**

Introducing The VIP Library

The Library Concept

The **VIP Terminal** is only the first in a whole series of elegant software for your Commodore 64 called the **VIP Library.** This complete collection of easy-to-use, serious, high quality, totally interactive productivity software includes **VIP Writer, VIP Speller, VIP Calc, VIP Database, VIP Disk-ZAP, VIP Accountant and VIP Tax.** All are equal in quality to much more expensive software for the IBM PC, and all are very affordable!



Virtual Memory

VIP Library programs are not limited by the size of your computer's memory. All programs use virtual memory techniques to allow creation and use of files larger than your computer's available work area. You're only limited by the space on your disk!

©1983 by Softlaw Corporation

Icons Make Learning Easy

Hi-res technology and sprites allow **VIP Library** programs to bring you task Icons, made famous by the Apple Lisa™ and the Xerox Star™. With these advanced sprite representations of the task options open to the user, even the total novice can, at a glance, perform every task with ease. Just look at the icon and press a key! No programs are easier or more fun to learn and use!

Total Compatibility

All **VIP Library** programs are compatible with each other and other computers for easy file transfer. Each uses ASCII, the universal language of computer communications so that files can be sent to and received from other computers without modification! The Library also gives you the benefit of a consistent icon and command structure. Once you have learned one program, the others will come easily.

Professional Displays

The 40-characters-per-line display of the Commodore 64 is inadequate for serious computing. An 80-column display is the industry standard. **VIP Library** programs bring this standard to your Commodore 64 with state-of-the-art graphics, without need for costly hardware modifications. With **VIP Library** programs you can freely choose from four displays: the standard 40 column display, plus a 64, 80 and even a 106 column by 25 line display. With these programs you can have more text on your screen than on an IBM PC or an Apple IIe with an 80-column board! Welcome to the professional world!

Who Is Softlaw?

Softlaw Corporation has years of software experience in micros. We currently offer the full-line **VIP Library** for other micros in the U.S. and in Europe. Now we are bringing this experience to the Commodore 64 so you get ultra-high quality software at very affordable prices.

List $59.00. **SALE $24.95** if purchased with 80 COLUMN BOARD! (Tape or Disk).

32K RAM EXPANDER $95.00
This cartridge increases programming power over **8 times!!** Expands total memory to 57K (57,000 bytes). Block switches are on outside of cover! Has expansion port!! Lists for $199 **(OUR BEST BUY!)**

60K MEMORY EXPANDER $49.00
Sixslot — Switch selectable — Reset button — Ribbon cable — CARDCO. A must to get the most out of your VIC-20 Computer!

8K RAM CARTRIDGE $39.00
Increases programming power 2 1/2 times. Expands total memory to 33K (33,000 bytes). Memory block switches are on outside of cover! Includes FREE $16.95 game.

16K RAM CARTRIDGE $55.00
Increases programming power 4 times. Expands total memory to 41K (41,000 bytes). Memory block switches are an outside cover! CARDCO Includes FREE $29.95 adventure game!!

12" GREEN SCREEN MONITOR $99.00
Excellent quality GREEN PHOSPHOROUS VIDEO MONITOR with antiglare, 1920 characters (80 characters x 24 rows). Save your TV! a must for 80 column word processors. PLUS $9.95 for VIC 20 or Commodore 64 Cable.

12" AMBER SCREEN MONITOR $119.00
Premium quality AMBER VIDEO MONITOR With antiglare, (80 characters x 24 rows), exceptionally clear screen, faster scanning. PLUS $9.95 for VIC 20 or Commodore 64 Cable.

FANTASTIC PRINTER SALE

as low as **$149.00**

- *15 Day Free Trial - 180 Day Immediate Replacement Warranty*

	LIST	SALE
80 COLUMN THERMAL PRINTER — 60 CPS Bi-directional, dot matrix, prints 8½" letter size paper, full 80 columns, high resolution graphics, dot bit addressable, special symbols and true decenders! (Centronics parallel interface)	$199	**$149**
80 COLUMN TRACTOR-FRICTION PRINTER — 80 CPS Bi-directional, dot matrix, impact, prints single sheets, continuous feed paper, adjustable columns, 40 to 132 characters! Roll paper adapter $32.95. Centronics parallel interface)	$399	**$209**
PREMIUM QUALITY 10" CARRIAGE T/F PRINTER — 120 CPS Bi-directional, impact, 9 x 9 dot matrix with double strike for 18 x 18 dot matrix. High resolution bit image (120 x 144 dot matrix) underlining back spacing, left and right margin settings, true lower decenders, with super and sub scripts. Prints standard, italic, block graphics, special characters, plus 24 of user definable characters and much more!! Prints single sheets, continuous feed and roll paper! (Centronics parallel interface)	$499	**$289**
PREMIUM QUALITY 15½" CARRIAGE PRINTER — 120 CPS Has all the features of the Premium Quality 10" Carriage T/F Printer above plus a 15½" carriage and more powerful electronic components to handle large business forms! (Centronics parallel interface)	$599	**$379**
HIGH SPEED PREMIUM QUALITY T/F 10" PRINTER — 160 CPS Save printing time with these plus features: 160 CPS speed, 100% duty cycle, 8K buffer diverse character fonts special symbols and true decenders, vertical and horizontal tabs. This is Red Hot Efficiency!!! (Serial or Centronics parallel interface)	$699	**$499**
HIGH SPEED PREMIUM QUALITY T/F 15½" PRINTER — 160 CPS Has all the features of the 10" Carriage high speed printer plus a 15½" carriage and more powerful electronics to handle larger business forms! (Serial or Centronics parallel interface)	$799	**$599**

PARALLEL PRINTER INTERFACES: (IN STOCK)

- For VIC-20 and COMMODORE 64 **$49.00**
- For all APPLE COMPUTERS **$69.00**
- For ATARI 400 and 800 COMPUTERS **$79.00**

NOTE: *Other printer interfaces are available at computer stores!*

Display Monitors From Sanyo

With the need for computing power growing every day, Sanyo has stepped in to meet the demand with a whole new line of low cost, high quality data monitors. Designed for commercial and personal computer use. All models come with an array of features, including up-front brightness and contrast controls. The capacity 5 × 7 dot characters as the input is 24 lines of characters with up to 80 characters per line.

Equally important, all are built with Sanyo's commitment to technological excellence. In the world of Audio/Video, Sanyo is synonymous with reliability and performance. And Sanyo quality is reflected in our reputation. Unlike some suppliers, Sanyo designs, manufactures and tests virtually all the parts that go into our products, from cameras to stereos. That's an assurance not everybody can give you!

line. Try it with LETTER, FN$, EFFORT, SEND, or your own favorite forbidden variable name.

A word of caution, though. ST, TI, and TI$ are *reserved variable names*, not *keywords* like LET, PRINT, and other BASIC commands or functions. You will not be able to use variable names whose first two letters match these (like START or TIME) even with the technique described in this article. Since they are just variable names, however, you may embed them elsewhere within longer names of your own (FIRST and ATTIC, for example) without any special editing tricks.

Indented Listings And Blank Lines

Besides preventing the selection of certain variable names, BASIC also seems to prevent the entry of blank lines as well as spaces at the beginning of a line. Thus we cannot neatly frame the blocks of code—loops, or IF/THEN options, or subroutines—that occur in a program. If you have programmed only in BASIC, you may not be concerned about such things. But anyone who has used a structured language like Pascal appreciates being able to see a listing like this:

```
10 FOR I = 1 TO 10
20    PRINT "WE INDENT EVERY STATEMENT"
30    PRINT "THAT LIES WITHIN"
40    PRINT "THE FOR-NEXT 'BLOCK'"
50 NEXT I
60
70 PRINT "AND LEAVE A BLANK LINE BETWEEN
   BLOCKS"
```

Try entering and LISTing the program above. Here's what you should see:

```
10 FOR I = 1 TO 10
20 PRINT "WE INDENT EVERY STATEMENT"
30 PRINT "THAT LIES WITHIN"
40 PRINT "THE FOR-NEXT 'BLOCK'"
50 NEXT I
70 PRINT "AND LEAVE A BLANK LINE BETWEEN
   {SPACE}BLOCKS"
```

The blank line and all the indentations have disappeared. Of course, Commodore BASIC lets you place a single colon at the start of each line and then indent as much as you wish. But that's not the same as a nice, clean blank line.

Once again, we can type an extra graphics character and fool BASIC. When typing in a program, many people type a space after the line number for readability. But instead of the space, you can type the SHIFTed J. Reenter the preceding program this way:

```
10JFOR I= 1 TO 10
20J  PRINT "WE INDENT EVERY STATEMENT"
30J  PRINT "THAT LIES WITHIN"
40J  PRINT "THE FOR-NEXT 'BLOCK'"
50JNEXT I
```

Now when you LIST, you see an indented format identical to the one you first tried to enter.

Fooling BASIC into giving you a blank line is a little trickier. A single SHIFTed J will not do the job. If you add a line 99, say, to your program and put only the graphics character on that line, line 99 will not show up in the LISTing. But try entering this (note the space in between the two SHIFTed Js):

```
99 J J
```

Now LIST the program and you'll see a blank line 99.

Paying The Price

There is a price to pay for all this. The most obvious (and painful for those with unexpanded VICs) is memory consumption. Long variable names and indentation gobble up a lot of bytes. A final version of a routine, though, can be condensed by a good list-crunching program, while the original remains a very readable version for later examination or revision.

Another penalty is simply the bother of remembering to type extra characters. Be careful whenever you try to edit a line. To preserve any indentation, you must enter a SHIFTed J in place of the space following the line number each time you change the line. And it's easy to forget to "legalize" a variable name by inserting a graphics character within an embedded BASIC keyword. If you do forget, you will be reminded when you get a syntax error in the program. So watch your editing steps carefully.

The hunt-and-peck typist (with a large hunt-to-peck ratio) might find that all these extra characters are a nuisance. But a little irritation can lead to a lot of satisfaction when you get a more readable program listing.

How Does It Work?

There are BASIC routines that RUN and LIST a program. If you've experimented with the short listings here, or with your own, you have proved to yourself that RUN apparently doesn't mind using keywords in variable names, and LIST seems to accept leading spaces in indented lines. If these key routines are so tolerant, what is it that requires us to be so sneaky in achieving them? The answers lie in the behavior of several other parts of BASIC.

Are They Really Illegal?

First, let's consider illegal variables and a BASIC routine we'll call TOKENIZE.

We usually think of BASIC commands as words like INPUT or LET or GOTO. But the RUN

routine does not see it that way. By the time RUN sees a program, BASIC keywords have been replaced by single-byte numeric codes, or *tokens*. TOKENIZE is the part of BASIC that translates the keywords we type into these codes. For example, when we type the word INPUT, TOKENIZE will collect the characters in that word from the five bytes of memory they occupy, match them with a word in the computer's list of BASIC keywords, and then replace them with the token for INPUT (the number 133), which takes up only one byte. This saves some space in BASIC memory.

But TOKENIZE also discards any out-of-place graphics characters as it crunches a BASIC command into the computer's memory. This is what allows us to enter forbidden variable names. When we insert a graphics character (like the SHIFTed J) in the middle of what would otherwise be a keyword, imagine how TOKENIZE must react. Does it ever find the word INPUT? Not quite. As it is collecting characters, it is interrupted before finding a perfect match with the BASIC word INPUT. The match is a failure, but the character which foiled it is eventually discarded. When RUN gets at the program, it now finds a plain INPUT (five bytes worth) instead of the single-byte token that represents the INPUT command. Any such character string is treated as a variable name.

Our illegal variable names, then, are not illegal at all. We just have to be sneaky enough in entering and editing them to prevent TOKENIZE from doing its job.

Finding The Right Routine

And what of the graphics character used at the beginning of an indented line?

TOKENIZE is involved again, this time because it does just what we want done: It keeps spaces right where we put them. Some other parts of BASIC use a routine that discards spaces. One of these is the part that translates the characters in a line number we type into the numeric form in which it is stored. Try leaving a space between two digits in a line number. No problem—the spaces are discarded and the line number appears in a listing just as if you had not inserted them.

BASIC continues to throw away spaces until a nondigit character which eliminates all indented lines is found. The rest of the line is turned over to the TOKENIZE routine. But by then it is too late: All indentations have already been stripped.

Our strategy must be to place a character immediately after the line number so that the following spaces will be handled by the right routine for our purposes—by TOKENIZE. A graphics character, first recognized as a nondigit character in the collection of a line number and then neatly discarded by TOKENIZE, is the perfect choice.

Guarding The Blanks

Finally, you may recall that in order to create a line completely blank except for its number, we needed first a graphics character, then a space, then a second graphics character. The reason for the first was just discussed. We need the space so there will be something on the line for TOKENIZE to accept. Remember that entering a completely blank line just results in its elimination from the program. But what of the second graphics character? If TOKENIZE doesn't mind spaces, why shouldn't it accept a whole line full of them following the initial graphics character?

In the first place, we probably want only one space—just enough to create a blank line. And second, TOKENIZE never gets to look at those trailing spaces anyway. The very first part of BASIC involved in handling a new line, the part that collects characters off the screen, discards these spaces. Both graphics characters are needed to protect lone blanks from the space-killing habits of a couple of parts of BASIC. If you want blank lines with a lot of spaces, though, there is no reason why you couldn't enter one with, say, 70 of them. Just be sure they have graphics "bodyguards" on either end.

A Do-Nothing Program

It has been said that no programming language can prevent the writing of bad programs. To prove that this is also true of editing tricks designed to promote readable listings, type in the following program. It's not good for much except sneaky-editing practice—and perhaps confounding a few BASIC programming friends with the fact it runs without error.

```
100 LET BEGINNING = 1
110 LET END = 10
120
130 FOR POSITION = BEGINNING TO END
140   INPUT NOTHING
150   PRINT NOTHING
160   GET NOTHING
170 NEXT POSITION
180
199 END
```

All products subject to availability from manufacturers and/or suppliers. All prices in U.S. dollars.

Getting Started With A Disk Drive

Part 5: Questions And Answers

Charles Brannon, Program Editor

In the conclusion of this series, we answer several common questions about disk drives and disk files.

Q: Can you use CMD with disk files?

A: Yes. CMD is used to divert output from the screen to another device. It is usually used with a printer to make listings (OPEN 4,4:CMD4:LIST). After a CMD, everything that would go to the screen ends up going to the device you OPENed. For example, a series of PRINTs can be sent either to the screen or to the printer with CMD.

Many people don't know that CMD has the same syntax as PRINT#. For example, you can use:

```
CMD 4,"THIS IS A MESSAGE"
```

CMD 4 by itself will, therefore, send a blank line, as well as direct output away from the screen. If you have a disk file opened for writing, you can use CMD to have all PRINT statements write to this file. Just remember that the blank line put out by CMD will give you problems if you try to read the file with INPUT#.

To cancel a CMD (highly recommended before you CLOSE a file), use PRINT#, as in PRINT#4:CLOSE 4. This also insures that every last drop of your file is written out.

Q: What do I do if a program crashes and the red "busy" light is still on?

A: Be careful. The program may have OPENed a file for writing. You need to properly CLOSE the file to prevent a bad directory entry. Use this one line to make sure all files are closed:

```
CLOSE 15:OPEN 15,8,15:CLOSE 15
```

Be aware that OPENing or CLOSEing the command channel will disrupt any OPEN files, forcing them CLOSEd.

If a file isn't closed properly, it appears on the directory with an asterisk next to the filename. To clear it up, enter:

```
OPEN 15,8,15,"V":CLOSE 15
```

Do not attempt to scratch such a file.

Q: Why can't I read my friend's disk on my 1541?

A: Even though Commodore drives 4040, 1540, and 1541 are supposed to be read/write compatible, differences exist. First, most drives deviate from the ideal speed of 300 RPM (revolutions per minute). Depending on the extent of the deviation, this can cause either trivial problems, such as a retry (the head attempts to reread a sector that it

COMMODORE OWNERS...

there is no need to spend thousands of dollars for a new business computer!

Nor is there need to go through the hassle and expense of learning a complicated new system.

An easy expansion will convert your ***Commodore***® into a powerful business computer that will have you running productive business programs as quickly as 1, 2 . . . *plug it in and grow!*

Begin with the *reliable new MSD® Super Disk* . . . the only disk drive readily available ***for Commodore computers.*** Gain instantaneous random access to programs and information, and save valuable time in executing your programs.

Next . . . interface the new, state-of-the-art dot matrix printer . . . the *Panasonic® KX-P1060* for hard copy that will support and document your task.

Add *expansion modules* for greater power and up to 64K memory. Our terminal emulators allow you to communicate with other computers, such as the SOURCE, DOW JONES or COMPUSERVE.

Complete the expansion process with software applications to address accounting, word processing, and other business requirements.

Don't spend thousands of dollars on a complicated PC . . . expand your ***Commodore*** and *get down to business.* The expansion is so easy you will be up and running the same day.

Call or come by today to learn more about Your Business Software's "Expand Your Business Plan."

couldn't read on the first try), or it can make a disk totally unreadable.

A sector on a disk can hold 256 bytes, and has a finite area on the disk's surface. The head has to be synchronized with the speed of the disk in order to write to a selected sector. It is aided in this by timing information written to the disk when it was formatted (NEWed). The physical area of a sector is determined by the speed at which the disk turns.

If the disk turns faster than it should, the data overflows the sector, overwriting nearby sectors and the timing data. If the disk turns too slowly, it does not fill up the sector. The data may also be written too compactly to be readable.

You may not notice if your drive is too fast or too slow, since the speed at which it reads or writes usually matches the speed at which the disk was formatted. "Fast" and "slow" are relative to individual drives, not to 300 RPM.

A fast drive may miss the more compact information written by a slower drive. It goes so fast the slower data is seen as a "blur." The faster drive may also have trouble writing to the disk, since the timing (formatting) information is similarly compacted. If you do manage to write to the slow-formatted disk, the faster drive cannot squeeze its information into the sectors created on the slower drives. In the worst case, the faster drive overwrites the timing information, making one or more sectors totally unreadable on either drive.

Now, if you bring a disk formatted on a fast drive to a slower drive, things aren't as bad. The slower drive can easily read the longer sectors created by the fast drive. When it writes to the disk, it just doesn't use all the physical space allocated by the fast drive. But when you bring the disk back to the fast drive, it may not be able to read the sectors written by the slower drive.

There are other potential variations, such as head alignment and DOS versions. In theory, most Commodore drives should be compatible, but beware of the variations. It's always safe to try to *read* any disk on any drive, but beware of writing. If you're not sure, try to write with your friend's drive on a disk formatted on your drive. Then try out the file on your drive again. This way, you can confirm if disk-swapping is safe for both of you.

Q: How many files can I have OPEN at once?

A: The operating system (OS) permits you to have up to ten files open simultaneously. However, each file must use a different disk buffer in the OPEN statement. The disk buffer is internal to the disk drive, and accumulates data until it holds a block (256 bytes) of data. The buffer then transfers data to a disk sector (in a write operation) or to the computer (for reading).

The OPEN command specifies the disk buffer to be used as the secondary address:

OPEN *filenum,devnum,buffer*

filenum – File number used in INPUT#, GET#, PRINT#, and CLOSE commands.
devnum – Hardware device number (8 for a single disk drive)
buffer – A secondary address from 2–14 specifying which buffer to use. Buffer number 1 is reserved for program saves and loads. Secondary address 15 is reserved for the command channel.

If you have more than one disk file open simultaneously, each file must use a unique buffer, or data will become garbled.

Q: How do I make a backup copy of a disk?

A: It's important to make a backup copy of commercial software. That way, you can use the copy, and store the original in a safe place. If anything goes wrong, you can just make another working copy. Unfortunately, most software is copy-protected, to prevent illegitimate copies from being made.

Even if the software isn't protected, there are no built-in commands to copy an entire disk. It's easy enough to LOAD, then reSAVE BASIC programs, but machine language programs, sequential data files, relative files, and mysterious USR files are far more difficult. Your best bet is to use a backup program. For your convenience, we have reprinted Harvey Herman's single drive backup program. It works on both an expanded VIC and the 64.

See program listing on page 163.

Free Disk Program

Sunsoft's 1541 Disk Backup program copies almost any disk. It's FREE when you buy any disk program from our free catalog, now featuring GETCHA! and CIPHER. GETCHA! gives you five levels of play on a random playfield. Get the dollars before the taxman gets them—or you! Music and graphics, for Com. 64, tape or disk: $14.95. And now, a program for people who need (shh!) security. CIPHER sees to it that your computer files are accessible only to you. For 64, on disk: $14.95.

A Perfect "5" for Your 64

Soft People's TaxWare™ $44.95

TAX DEDUCTIBLE
AS
Tax Preparation
aid

Every American has to pay taxes. Why pay more than you should?

With TaxWare, a year round record keeping system...you store all tax related info on electronic copies of the most popular tax forms. With TaxWare you may calculate tax due at any time. Make one change on one form and all other forms are re-computed.

- You can do endless 'what ifs', i.e. "what if your spouse takes a job", "what if I sell my stock", "what is the credit for child care"...
- You may tag any item belonging to husband/wife or joint and see the different tax consequences.
- Handles itemized deductions, income averaging, dividends, stocks, self-employment, rents, royalties, childcare, marriage deductions and more...
- Create lists as you need for income, medical deductions, IRA payments or anything else.
- Lists are easily displayed and updated totals automatically transferred to the proper tax forms.
- Handles all popular forms: 1040 Schedule A, B, G, Schedule C, C1, D, E, W, 2441.
- An Annual Update Plan/and or Major Update if significant tax laws change will be available for the next year.

dMOS™

Meet the Tough Manager.

The Best data base managing tool for the collection, arrangement and display of alphanumeric data. The unique pattern matching and searching capabilities make dMOS the best researching program available.

Pattern matching:

- Can be used on either or both sides of the string.
- Map search technique to achieve a "logical AND", while searching between fields.
- Display either those records found by a search or those NOT found.

Printer control:

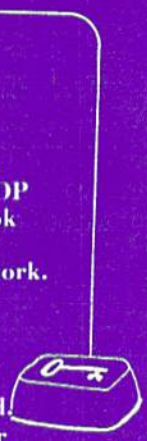
- Rearrange and supress fields.
- Supress Field titles.
- Insert short (10 character) texts.
- Selectively print records.

$39.95

Missing Key™

The Key you've looked for, but wasn't there.

After programming for hours you press RUN for a final check of your work - the computer locks up. Nothing appears on the screen. You press RUN/STOP ...nothing - you press RESTORE...nothing - you look for the missing key but it isn't there. Now you don't have to turn off your computer and lose hours of work.



Add the Missing Key:

- Press this key and the computer resets itself from any kind of lock-up.
- Load and run the program included with the Missing Key and your 'BASIC' program is restored.
- Takes nothing away from your computer, neither memory or a plug-in port.
- Fits onto your Commodore 64 keyboard (No wiring to add).
- Will not void your CBM warranty.

$29.95

Phone Boss™

A powerful and dedicated Data Manager.

Designed to store and organize your personal phone listings. The User has complete control of 15 category titles and entries.

9 Options available:

1. Add a new listing to directory
2. Change a listing now in directory.
3. List full directory.
4. List a phone#, giving a name.
5. List all entries in a class.
6. Change the list of catagories.
7. Write the directory onto a disk.
8. Read a directory from disk.
9. Exit the program.

$29.95

Softloc™

The Program Security System for the Commodore 64

Set up program security in minutes.
Lock up your personal, financial or business records.

3 Types of protection:

- 7 Digit access code
- Encodes program
- Modified diskette directory

The Inner World Of Computers

Part 5: Small Is Beautiful

Tom Prendergast

In this final installment, an old programming trick is combined with the new skills developed in the previous four installments. The author includes a powerful technique that demonstrates how so much can be achieved in one of the smallest computers—the VIC-20.

I think the VIC-20 is the greatest thing since ELFS (the tiny ELectronic FingerS that toggle the even tinier bit-switches inside your computer). It's inexpensive, easy to use, and fantastic for games and graphics.

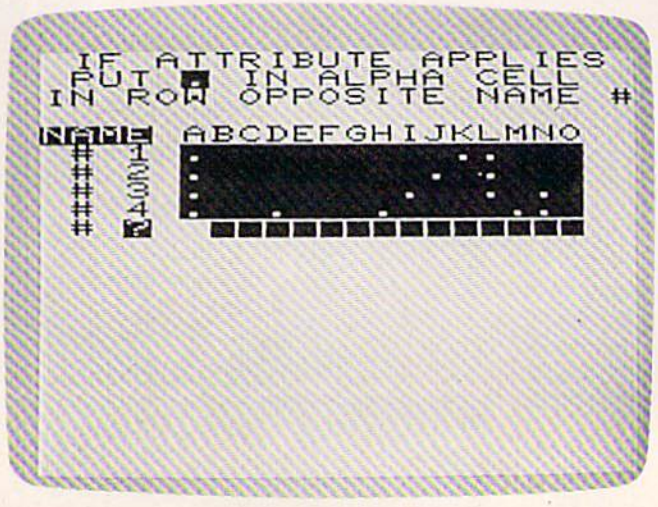
The VIC does have its limits, though. For one thing, the large screen characters and short lines (22 characters across) make word processing an awkward task. A few lines on a typewritten page fill up the VIC screen.

Another handicap is the small amount of memory. You get only 3583 bytes on the unexpanded VIC. This is still a couple of thousand more bytes than the fabled Univac and ENIAC—the big mainframes of 30 and 40 years ago that filled up whole buildings and brought on the age of computing. But unless you're sentimental about such things, you're not going to be happy for long with only 3.5K of memory.

After I'd run out of memory on too many programs that I considered very small, I bought a Super Expander. Not only does this cartridge make it easy to do HIRES (HIgh RESolution graphics) by adding commands like DRAW, PAINT, POINT, and CIRCLE, but Commodore also adds another 3K of memory to give you a total of 6519 RAM bytes.

But despite its shortcomings, the VIC is a powerful computer. Big isn't necessarily better, and you can't always measure a program's value by its length alone. There are few things that you can do on expensive machines that you can't do on a VIC. It takes some doing, maybe, and it may not be as easy, but it can be done.

If you counted every letter of every word on this page, including spaces, you'd find there were about 6000. That's 6000 bytes (every letter or space uses a byte of memory)—not counting pointers



"Binamite" gives you several options for displaying data. Here the information is shown in the table format.

AARDVARK LTD.

NOW THE BEST COST LESS

DUNGEONS OF DEATH - A serious role playing game for up to 6 players. You get a choice of race and characters that grow from game to game. You also get a graphic maze and a 15 page manual.

Available On: TRS80C 16K EXT., CMD64, VIC20 13K, IBMPC, TRS80C 32K, MC10 16K

TAPE $14.95 DISK $19.95

BAG-IT-MAN - The ultimate arcade game for TRS80C or MCD64. This one has three screens full of BAGS OF GOLD, CARTS & ELEVATORS TO RIDE IN, MINE SHAFTS, and TWO NASTY GUARDS. Great sound and color and continuous excitement.

Available On: TRS80C 32K, CMD64

TAPE $19.95 DISK $24.95

QUEST - A different kind of Graphic Adventure, it is played on a computer generated mape of Alesia. You'll have to build an army and feed them through combat, bargaining, exploration of ruins and temples, and outright banditry! Takes 2 - 5 hours to play and is different each time.

Available On: TRS80C 16K, CMD64, VIC20 13K, MC10 16K, TI99 (EXT. BASIC), IBMPC

TAPE $14.95 DISK $19.95

STARFIRE - If you enjoyed StarRaiders or StarWars, you will love Starfire. It is not a copy, but the best shoot-em-up, see them in the window space game on the CMD64 or TRS80C. The fantastic graphics will put you right in the control room as you hyperspace from quadrant to quadrant fighting the aliens and protecting your bases.

Available On: TRS80C 16K, CMD64

TAPE $19.95 DISK $24.95

WIZARDS TOWER - A fantasy game played on a map of forests and dungeons - with dragons and wizards to kill. Similar to QUEST and fun for adults, but a little simpler and playable for the younger set (8 - 60).

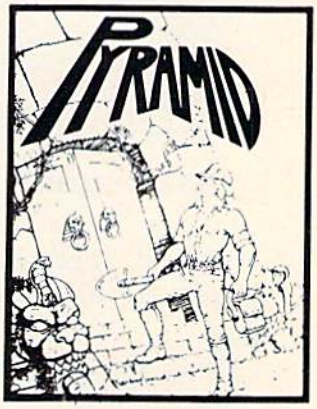
Available On: TRS80C 16K EXT., CMD64, VIC20 13K, TI99, IBMPC

TAPE $14.95 DISK $19.95

PYRAMID - ONE OF THE TOUGHEST ADVENTURES. Average time through the pyramid is 50 - 70 hours. Clues are everywhere and some ingenious problems make this popular around the world.

Available On: TRS80C 16K, CMD64, MC10 16K, TIMEX, IBM PC, TI99, VIC20 13K

TAPE $14.95 DISK $19.95



AARDVARK offers over 120 original high quality programs. Send one dollar for a current catalog and receive a $1.00 gift certificate good towards your next purchase.

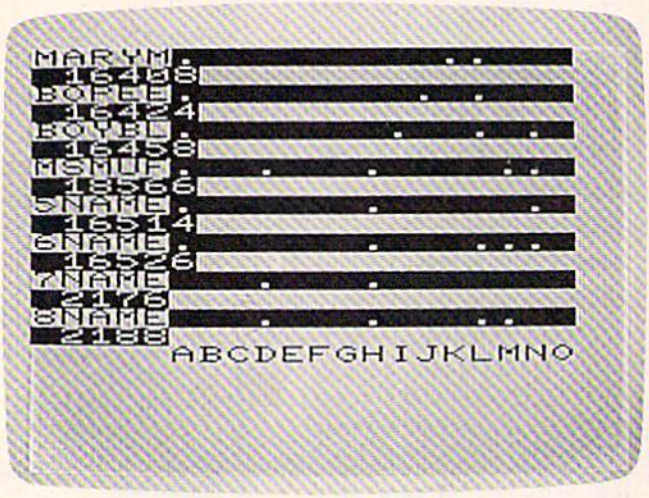
CMD64 / TRS80C / IBMPC / VIC20 / TI99

and such—just to store this page in RAM. That's a lot more memory than you have on the unexpanded VIC. How can you even begin to process that much data?

You could feed the data in from tape a few bytes at a time, I suppose, process it, and then pull in some more data. But that would take a lot of time and tape. You'd also be using up most of your memory for tape handling and "overhead." So what can you do?

For an answer, let's look back at the small memories on the early mainframes. One reason for those small memories was the cost—something like $10 a bit (not a byte, a bit). This meant it often was cheaper to pay people to file things manually rather than to use expensive computer memory to store it. So, early on, a technique called *bit indexing* was developed, in which one bit did the work of a byte—or even hundreds of bytes.

Computers have added a lot of memory since then, but the basic way a computer works hasn't



Creating a data table with "Binamite."

changed. That's why this old trick works as well today as it did then.

Bit indexing is a kind of shorthand, with each bit representing some unit of information, like a name on a list. If the bit is turned on, that name is on the list. And since we already have our list on paper, why not keep it on that same piece of paper and use a form of bit indexing to process it on the VIC. By doing this, we can handle the equivalent of thousands of bytes of data without eating up precious memory.

This isn't a big deal so long as the data we want to process is in an organized list already and we just have to write some numbers beside the items on the list.

Let's say you're in the mail order business and want to send catalogs or a special mailing to customers, but you want to rank them by the amount of money spent with you, by credit rating, your best customers. You have a list of all your and so on. You probably have all the information you need in the customer file, along with the amounts billed and to be collected (accounts receivable). Of course, you don't want to disturb that file, but going through it can tell you what items your customers usually order, their frequency of ordering, and how fast they pay or don't pay.

The files are probably in alphabetical order. Later on, you can arrange the list for mailing by zip code or some other way, but to demonstrate the program we're using, "Binamite," let's just take the first 15 names out of the file, write them on a sheet of paper, and number them. (Remember, by using paper instead of the computer, we save a byte for every letter.)

1. Mary Contrary
2. Mary Lamb
3. Little Boy Blue
4. Ms Muffit
5. Fifth Name
6. Sixth Name
7. Seventh Name

and so on until we have 14 names.

Next, we want to know the type of items they've bought, so we'll know what to put in our catalog. Let's call these items "attributes" and assign letters of the alphabet as labels, like this:

A) Sports Clothing
B) Bats and Balls
C) Caps
D) Down-Filled Jackets
E) Extra-Large Sizes
F) Feminine Finery
G) 10-Gallon Hats
H) Helmets
I) Insulated Boots
J) Junior Sizes
K) Skis
L) Lambswool Jackets
M) Muffs
N) Notions
O) Ozoneware

These can be any length since we're keeping them on paper instead of in VIC memory. They don't have to match the letters alphabetically, either: B doesn't have to stand for Bats and Balls, or C for Caps. It just makes it easier to remember what letters we've assigned to what items when we ask Binamite later to match them against the names on the list.

Now, with all the paperwork out of the way, let's build the program up bit by bit.

As you might expect from the name, Binamite works on a binary system. You may remember a short program in last month's installment that

A Basket Full of Software Values at Chick-Size Prices? Eggs-Actly!

commodore 64

Quality Software Ideal for the Commodore 64™ and VIC 20™

WORD PROCESSING — TOTL.TEXT produces documents, forms and letters with speed and versatility.

SPELLING CHECKER — TOTL.SPELLER—a compiled spelling-checker with built-in dictionary that quickly proofreads and suggests correct spelling.

MAILING LIST AND LABEL — TOTL.LABEL organizes mailing lists, collection catalogs, menus, all listing and sorting. Merges with TOTL.TEXT.

DATABASE MANAGEMENT — TOTL.INFOMASTER features dynamic record and field definitions, multiple options, user defined report formulas. Integrates with other TOTL programs.

BUSINESS ACCOUNTING — TOTL.BUSINESS handles A/R, A/P, inventory and sales reports and other record-keeping tasks.

TIME MANAGEMENT — TOTL TIME MANAGER plans schedules and analyzes events in numerous ways.

KEYWORD CROSS REFERENCE — RESEARCH ASSISTANT—a great tool for automated indexing and cross reference system.

1309 Boardman-Poland Rd., Poland, OH 44514

converted binary numbers (1's and 0's) to decimal. That program was an exercise for this month's program, because we're using basically the same algorithm for Binamite.

In last month's program, we input the binary digits in that conversion program as a *string* instead of a number. Ordinarily, the computer can't use a string to do arithmetic because the digits are seen as characters, not as numbers.

However, if you ask for the VALue of a string, the computer will start from the left and convert the string digits to a number. (If it finds a letter or a graphic that's not a number, it stops.) Suppose you have a string like this:

```
B$="101B"
```

If you ask the computer for the VALue of B$, you'll get this:

```
? VAL(B$)
  101  [the letter B is ignored]
```

We still have to convert the binary, because the computer treats that 101 as a decimal number 101, not as a binary 5. So we use the MID$ function to extract one digit at a time and multiply the VALue of the 1 or 0 by its power of two. All of the place values are then added together to get the decimal equivalent of the binary string, B$:

```
MID$(B$,1,1)="1"
MID$(B$,2,1)="0"
MID$(B$,3,1)="1"

Place power: 2↑2   2↑1   2↑0
        B$:  1     0     1

1*2↑2=4  (1 multiplied by the second power of 2)
0*2↑1=0  (0 multiplied by the first power of 2)
1*2↑0=1  (1 multiplied by the zero power of 2)
4+0+1=5
```

In the program, we use a FOR/NEXT loop for MID$ manipulation and multiplication of the powers.

To give you some hands-on experience this month, we will take you through the creation of a program step by step. So we're going to type in just the bare bones of the program at first, and explain each line's function as we go. Some of these lines will be out of order as we type them in, but the VIC will automatically rearrange them in the proper numeric order.

Here's the first line to type in:

```
110 PRINT"{RVS}NAME{RVS}ABCDEFGHIJKLMNO"
```

The letters ABCD...up to O identify the columns for the "alpha cells" (rows of little boxes), which correspond to our list of attributes. By processing these cells instead of long data strings, Binamite saves you lots of memory. Each name has a row of alpha cells, and when we INPUT a dot—one byte—into a cell, we attach that column's attribute A, or B, or whatever, to the name. (Rows read across, columns read down.) The arrangement will become clear after we've typed in the necessary lines for a trial run.

Line 120 is where we INPUT the dots (periods) to fill the alpha cells. We skip a cell, leaving it empty (no attribute), with the space bar. We can also delete a dot with the delete key, or go back and fill in a dot with the cursor left key.

Line 120 is probably the trickiest line in the whole program because we have to first print a row of alpha cells (using 15 shifted L graphics), then bring the cursor left 17 places so that it will be flashing and ready for INPUT at the first alpha cell (Column A).

```
120 INPUT" #{3 SPACES}{RVS}LLLLLLLLLLLLL
    L{17 LEFT}";B$:L=LEN(B$)
```

Now we get to the real meat of the program—converting the string of dots we've just INPUT, B$, to binary, then to a decimal VALue we can AND later:

```
130 XP=L-1:FOR I=1 TO L:DM$=MID$(B$,I,1):
    IF DM$ > "1"THEN PRINT "{UP}":DM$="":
    GOTO 120
```

Note that we've created a temporary *holding string*, DM$, in line 130. This makes DM$ the equivalent of MID$(B$,I,1)—that is, one digit of binary string B$, in place I, whatever I is at the moment—and saves us line space because we don't have to keep typing "MID$(B$,I,1)" all the time. That's DM$'s only function—a temporary string.

If you input anything but a period or a space, the IF throws you back to INPUT (line 120).

```
140 IF DM$="." THEN DM$="1"
```

Line 140 converts a dot (period) to the binary digit 1. Skipping a cell, or wiping out a dot (with the space bar or delete key), gives the empty space a value of zero, the binary digit 0.

```
150 D=D+(VAL(DM$))*2↑XP:XP=XP-1:NEXT
```

Line 150 multiplies each binary digit by the power of its place, then adds all the place values together for a decimal value given to D.

When the FOR/NEXT loop is completed, we GOSUB 300 in line 160 to deposit the row value into an array, then line 170 sends us back to line 120 to process another row:

```
160 GOSUB 300:T=T+1
170 PRINT"{UP}"TAB(2)T:B$="":D=0:IFT<TT T
    HEN 120
```

When we've completed our input to the alpha cells—assigning the attributes—line 240 will give us a number which we jot down beside each name on our list. With this encoded number, later we can analyze our list of names almost any way we want.

TAXES?

Cry UNCLE!

Just when you thought a degree in accounting was needed to wade through the morass of federal tax preparation, along comes UNCLE!

UNCLE! takes your hand and guides you through the tax manuals, asking just enough questions to translate the information for up to 28 forms and schedules. UNCLE! has a good memory; just give your name and SSN once and UNCLE! will make sure they get on every required form. Plus, if you want to noodle with numbers, UNCLE! has a calculator-type scratch pad. You can't fool your UNCLE!; if you enter an error, it will be flagged. When you're through conversing with UNCLE! on your Commodore 64 (single drive), simply feed the forms and schedules into a 16-17 cpi printer and UNCLE! will prepare every one of them. How much to put UNCLE! in your Commodore? $64!

VARANGER Computing · 180 Grand Avenue, Suite 900, Oakland, CA 94612

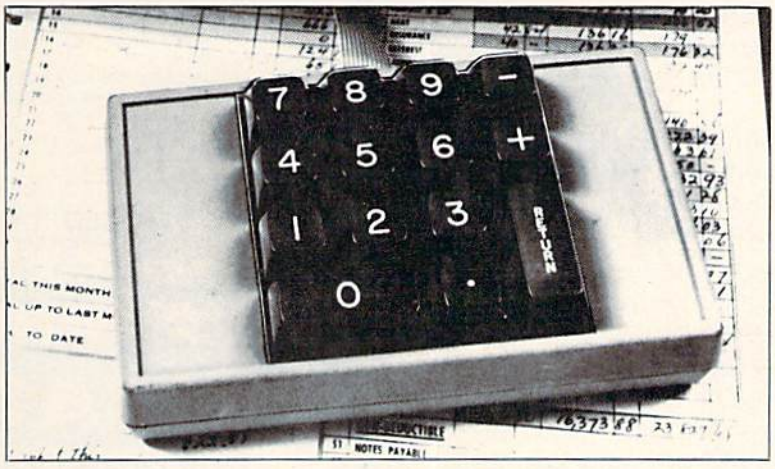
The Simpler, the Better



When it's on, it's on. No software to mess around with. This high quality, low-profile CP Numeric Keypad is the one for your Commodore 64 and VIC-20. It is guaranteed to be 100% compatible with all the software you have, now and forever, in any format. The Keypad easily connects in parallel with the existing keyboard connector. Now you can zip through your numeric work sheet, input your numbers and figures comfortably, quickly, and more easily than ever before at only $69.95.

Dealer inquiries welcome.

Commodore 64 and VIC-20 are trademarks of Commodore Business Machines, Inc.

```
240 FOR I=0 TO TT:PRINT"#"I+1"{3 SPACES}"
    D(I):NEXT
```

We're almost finished with our stripped-down version of the program except for typing in line 10:

```
10 PRINT CHR$(147):TT=14:DIM D(TT),B$(TT)
```

But don't forget our GOSUB. Notice that we've got to fence off our GOSUB routine from the rest of the program so that the VIC won't run into it and generate an UNDEF'D STATEMENT ERROR. So, actually, line 260, with its END, is part of GOSUB 300:

```
260 END:REM*SAVE DATA*
300 B$(T)=B$:D(T)=D
310 IF LEN(B$(T))<15 THEN B$(T)=LEFT$("
    {15 SPACES}",15-LEN(B$(T)))+B$(T)
320 RETURN
```

Now let's LIST what we've done and check the screen for obvious errors. If you don't spot any bugs, let's do a RUN.

Does the VIC display look anything like the photo on page 110? If it doesn't, LIST line 120 and check all the cursor moves to make sure you've got them in the right place.

You can use this stripped-down version to practice your dot input. Just be sure you're at the very end of the line—but not past column O—before you hit RETURN. If you don't, you'll land back at cell A to try again.

Other than that, Binamite is easy to work, once you're familiar with it.

When you're comfortable with your trial run, type in the complete program. Lines 10 and 240 are different, but you've got the hard part out of the way.

The beauty of Binamite is its flexibility. You can plug almost any kind of data into it to produce various graphic relationships between persons and items. For instance, if we want to find out the most popular item among our list of best customers, we can quickly spot it by noting the column with the most dots.

Binamite isn't very impressive right now because we're only processing a list of 14 names. After you get the hang of it, though, you can easily process hundreds of items—as many strings as you can squeeze into VIC memory. (I've been able to process as many as 500 items with the Super Expander's extra 3K of memory, by abbreviating the names to five characters plus the encoded number, making a maximum of ten characters per string.)

And you're not limited to names for your list processing, either. You could use the name column for items and the attitribute columns for a range of prices, for instance. The A attribute column could be a range of wholesale prices from $1 to $5, the B column a range from $6 to $10, and so on.

Or you could use Binamite to keep track of the books in your library. The name column would be the title of the book, and the letter column the book's location—on shelves A, B, C, in bookcase D downstairs.

See program listing on page 163.

COOL YOUR DISC DRIVE

with the "F2500" cooling fan for your Commodore 1540/1541 disc drive

Protect your valuable programs from excessive heat buildup

A must for every disc drive owner

• Powerful fan cools critical components • Helps prevent disc & drive problems due to excessive heat buildup • Quiet operation • High volume air output • Low profile • Easy installation–no tools required • 90-day free replacement warranty • only $54.95 U.S. ($69.95 Can). *B.C. residents add 7% sales tax.

1540 and 1541 are registered trademarks of Commodore Business Machines Inc.

To order your F2500 disc drive cooling fan please send your cheque or money order for $54.95 plus $2 for shipping to:

ASCII/POKE Printer
For VIC And 64

Todd Heimarck, Assistant Editor

This month's "Power BASIC"—a continuing series of helpful utilities and routines—provides a short machine language routine that automatically calculates ASCII and POKE values. It's a handy utility you can use while writing a BASIC program.

Reference Tables

Chances are, PRINTing to the screen was one of the first things you learned to do in BASIC. You probably also learned how to control where the computer prints by putting cursor commands within strings or by using SPC and TAB commands. The PRINT command is common, primarily because it is so easy to use. But in certain situations, you may need to find out a character's ASCII number. And sometimes it is quicker to simply POKE a character onto the screen.

But before you can POKE, you have to know the character number. Let's put a row of hearts at the top of the screen. So, we need to POKE a bunch of 81s. Wait, those are solid circles. What's the number for hearts? I know that list is somewhere in this book.

If you use POKEs or ASCII values in programming, you know how annoying it is to flip back and forth through the reference book, losing time and patience. Even worse, you could lose the book and end up typing the character and PEEKing screen memory to get the POKE value.

Let The Computer Do The Work

Your computer already knows the POKE values and ASCII numbers, so why not let it do the work?

This short machine language program, "ASCII/POKE Printer," does not use any BASIC memory. Its 52 bytes remain in the cassette buffer, ready to convert letters and graphics characters to POKE and ASCII numbers whenever you want.

Note that if you write a program that POKEs any of the address locations of the cassette buffer (828-1019), you may lose ASCII/POKE Printer. Also, if you use a cassette player for SAVEs, LOADs, or tape files, you will erase the machine language program. Fortunately, it is entirely relocatable, so if you want to use the cassette buffer, you can change line 10 to move it to another part of memory. On the 64, it is usually safe to use any of the memory locations from 49152 to 53247. If you have a VIC-20, you will have to protect part of BASIC RAM (52 bytes worth) with POKEs to 51, 52, 55, and 56.

LOADing And Using The Program

If you have a 64, type in Program 1. If you have a VIC, use Program 2, but if your VIC has 8K or more of expansion memory, change line 23 to read:

```
23 DATA169,0,133,212,174,0,16,32,205,221
   ,232,208,204
```

Make sure the DATA statements are exactly as printed. SAVE it to tape or disk and VERIFY (if you have a cassette drive). RUN the program and type NEW. The program is now in your cassette buffer. BASIC memory was cleared when you typed NEW, but it did not touch the cassette buffer.

Anytime you want to use ASCII/POKE Printer, type SYS 828. The computer will wait for you to type a character and then display that character in the upper-left corner with the ASCII value to the right and the POKE value below. Type another character and you get two new values.

To exit (back to BASIC), hold down SHIFT and press RETURN. This returns you to your program. SYS 828 will send you back to ASCII/POKE Printer,

and so on. You can toggle back and forth as the need arises.

Special Cases

There are some ASCII numbers that have no equivalent POKE. For example, adding CHR$(13) to a string will force a RETURN after the string is printed. But ASCII 13 cannot be POKEd to the screen (what would a RETURN look like?). ASCII/POKE Printer will give you the correct ASCII numbers, but for certain characters, like RETURN, it will print a blank space and list a POKE of 32 (which is the number for a blank space). In the case of function keys, CLR/HOME, INST/DEL, and color commands, it will print a reverse video character, as if in quote mode, and the correct ASCII number. But the POKE number will be wrong. Keys that perform a function—clearing the screen, for example—are not characters that can be POKEd to the screen.

Also note that you cannot get values for inverse video characters, which do not have separate ASCII numbers. To program a reverse character, precede it with a CHR$(18). To POKE an inverse video character, add 128 to the POKE value of the regular character.

This machine language utility will be most helpful when you are writing BASIC programs. By letting the computer tell you ASCII and POKE values, you can really save time. The program was written to be short and simple, but if you are familiar with machine language, you could modify it to do much more.

Program 1:

THE ULTIMATE CONNECTION

INTERPOD FOR COMMODORE 64 OR VIC 20

THE LIMBIC CONNECTION. . .

CONNECTING THE FEATURES OF THE FUTURE FOR COMMODORE TODAY'S USERS.

Exercise the full potential of the Commodore 64™ or VIC 20™ with the quality, multiple interface from Limbic Systems, Inc. INTERPOD is an intelligent, transparent interface that turns your computer into a powerful system without impacting on your computer's memory.

INTERPOD ALLOWS YOU TO ACCESS --

- up to 30 IEEE 488 disk drives & printers
- other IEEE instruments, including volt meters, plotters and other analog/digital peripherals
- the 1541 disk drive through a serial port on INTERPOD
- a wide range of inexpensive IEEE and RS232 matrix and quality printers

Simply plug INTERPOD into the serial port of your computer, power-up and you are ready to communicate with any number of IEEE devices and any RS232 printer.

British Technology for American Results. Interpod is distributed in the United States by Limbic Systems, Inc. Dealer and school discounts are available.

Dynamic SAVE For VIC And 64

Stephen S. Leven

These short programs, for the VIC or 64, can take the tedium out of frequently SAVEing and VERIFYing your BASIC programs. For disk and tape users.

When you are typing in a long program, it's a good idea to SAVE portions of it frequently, and to make backup copies. But it is tedious to continually type SAVE "PROGRAM NAME", wait until the program is saved, retype SAVE "PROGRAM NAME", then wait again. "Dynamic SAVE" will do this work for you, whether you use tape or disk, using a technique known as the dynamic keyboard.

Why You Should SAVE Periodically

A sudden loss of power—during a thunderstorm or when you accidentally knock the power cord from the wall socket—can instantly wipe out all your hours of hard work. Even something as simple as turning on the dishwasher or garbage disposal can cause a voltage drop that garbles the program in memory.

These four bits of advice will minimize the consequences of a sudden power failure or electrical glitch:

1. SAVE your program every 15 minutes or so, or whenever the changes you have made will cause you a serious setback if they are lost.
2. If you use tape, SAVE two copies of the program, one after the other, to reduce the chance of losing the program due to accidental damage to one section of the tape.
3. Use two tapes (or disks). For tape, first SAVE on one tape, then SAVE on a second. The third time you SAVE, use the first tape again. Continue to alternate tapes, so that if something happens during the SAVE, or your tape is damaged, you still have your previous version on the other tape. (Follow this same procedure for disk backup.)
4. Finally, when you have finished debugging your program and it runs perfectly, make one or two backup copies. It is a good idea to keep an archive tape (or disk) for emergencies. If your working copy of the program fails, you can retrieve your program from the archive tape (or disk).

The Dynamic Keyboard Technique

The term *dynamic keyboard* basically means that you have your program display certain screen instructions which are executed after the program ends. You do this by inserting program lines which CLEAR the screen and PRINT the instructions on the screen just before the END line, and then load the keyboard buffer with the cursor controls and RETURNs necessary to execute those instructions.

When the program comes to the END instruction, it goes into immediate mode. The first thing it checks is the keyboard buffer, which contains your RETURNs and cursor controls. It then executes them just as if you were typing them in. As the cursor moves across the commands printed on the screen, they are automatically executed.

Tape And Disk Versions

Program 1 is for tape users, and Program 2 for

disk users. It is a good idea to LOAD Dynamic SAVE before you start working on your program. You can change the line numbers if you wish, but, by using the line numbers I've used, you can easily remember that RUN 60000 will perform your SAVE.

Program 1 SAVEs two consecutive copies of your program, including Dynamic SAVE, to tape. When the SAVEs are completed, the screen will be set up to perform a VERIFY of each copy. Just rewind the tape and press RETURN.

Line 60010 defines the character for the quote mark, since using the CHR$ equivalent is the best way to PRINT it on the screen. This line also defines the name of the program to be SAVEd, which is stored in the variable N$. Change the contents of N$ to the name of the program you wish to save.

Line 60019 is a REM line, reminding you to use *either line 60020 or line 60021*, depending on whether you have a VIC or a 64. These two lines set the screen and border to their default colors, and define the character colors for use in line 60030. These colors are selected so that program operation on the screen is invisible. It's a good way to avoid screen clutter. If you want to see what the computer is doing, simply change the value of C1$ to that of C2$ in line 60020 or 60021.

Line 60030 changes the character color to that of the screen color by printing C1$. Then it clears the screen and displays the following message:

```
FORQ=1TO2:SAVE"DYNAMIC SAVE":NEXT
```

After printing, the character color is restored to normal by printing C2$.

Line 60040 loads the keyboard buffer with a HOME (ASCII 19) and RETURN (ASCII 13), just as though they had been typed in.

Line 60050 POKEs the following characters to the keyboard buffer: V, SHIFTed E, a colon, another V, and another SHIFTed E. (V-SHIFT-E is the Commodore abbreviation for the BASIC command VERIFY.)

The keyboard buffer (memory locations 631–640) can be loaded with up to ten characters. The first character to be executed should be POKEd into location 631, the second into location 632, and so on. (The character codes may be found in the appendices of *VIC-20 User's Manual, VIC-20 Programmer's Reference Guide, Commodore 64 User's Manual*, or *Commodore 64 Programmer's Reference Guide*.) Location 198 must be POKEd with the *number* of characters in the keyboard buffer, in this case seven. The END statement assures that the program will end at this point and pass control to the keyboard buffer.

Program 2 is similar to Program 1. The main differences are in line 60030 and in the characters POKEd into the keyboard buffer. In the disk version, line 60030 PRINTs, at the top of the screen, the disk command to SAVE and Replace the program, followed by a colon and the command to VERIFY the program on disk. Since the user does not need to take any action (such as rewinding a tape) in the disk version, verification can begin immediately after the SAVE. For that reason, the additional keyboard buffer POKEs in line 60050 of Program 1 are not needed in the disk version, so the program ENDs after POKEing a 2 in location 198 to indicate two characters in the keyboard buffer.

How To Use The Program

To use this program for saving to tape:

1. Type or LOAD Program 1 into your VIC-20 or Commodore 64 before you start writing your program. Substitute your program name in place of DYNAMIC SAVE in line 60010.

2. When you're ready to SAVE your program, place your tape into the recorder and type RUN 60000. The screen will clear, then the message PRESS RECORD AND PLAY ON TAPE will appear.

3. Press RECORD and PLAY. The computer will supply its typical response, OK, followed by SAVING and whatever program name you supplied.

4. After the first copy of the program is saved, the response SAVING and the program name will be repeated to indicate that the second copy is being SAVEd. When the second SAVE is finished, the familiar READY message will be displayed, followed by the flashing cursor, positioned on the line with the double VERIFY command (V-:V-).

5. *Be sure to rewind your tape to the beginning of the program.* Then press RETURN. The computer will respond with PRESS PLAY ON TAPE. After you press PLAY, the normal VERIFY routine will take place: OK, SEARCHING, FOUND and your program name, VERIFYING, OK. The process then repeats for the second copy. If you choose not to VERIFY, use the cursor controls to move the cursor off the V-:V- line before pressing RETURN.

If you use disk, type or LOAD Program 2, making sure to substitute your program name in place of DYNAMIC SAVE in line 60010. When you're ready to SAVE, simply type RUN 60000. The computer will then display SAVING and VERIFYING messages at the appropriate time.

Once Dynamic SAVE is in place, you can face the possibility of a power failure with a little less dread.

See program listings on page 165.

COLOR PROBLEMS?
One of Our Four New Products will Solve Them!

You're not alone. Thousands of Commodore 64 owners have "fuzzy" color on their TV. Most have interference lines crowding out their great graphics. Many have bought expensive monitors or new TVs, and often even that hasn't helped. But, most of us just lived with the problem. Now the engineers at Bytes & Pieces have four simple, inexpensive solutions.

If you have an "old 64" (with the 5 pin Monitor Din Plug), you've probably had color, resolution and interference problems. We can solve them!

1. **The Interference Stopper**...A new kit that installs in minutes with two simple solder connections. Best results when combined with #2, 3, or 4 below. Absolutely stops 90% of the RF interference on your screen. NEW! **$15.95**

2. **The Color Sharpener**...Use if your "old 64" is hooked up to a TV. Just plug into the monitor plug, and the color and contrast immediately improve. Dramatically. Crisp letters. Great graphics. **$18.95**

3. **The NEW Color Sharpener CABLE**...Use if your "old 64" is hooked up to a monitor. A new 2 prong cable, with the Color Sharpener built in. All the benefits of #2, on your monitor. **$24.95**

4. **The Monitor "Improver"**...If you have a Commodore 1701 monitor, this cable (3 prong) gives you a picture you won't believe. Better than the cable Commodore built...by a lot. Try it, you won't be disappointed. (Also hooks your "Old 64" to the 1702.) **$24.95**

5. **The Reset Switch**...Here it is, a Reset Switch for Vic or Commodore. Get back into control of a "Hung-Up" program. Resets all pointers. Easy two solder connection installation. Every computer should have one. NEW! **$9.95**

If any of our products do not work to your satisfaction, send it back and we'll refund your purchase price in full.

DUST PROBLEMS?
Solve Them with Matching Dust Covers for Computer, Tape and Disk. $7.95—$9.95

These are the deluxe covers for either the Commodore 64 or the Vic 20 made of brown leather grain Naugahyde, specially lined with a soft non-scratch liner, for a cover you just can't beat.

Don't waste your money on those cheap looking, clear plastic, static filled covers. Get the quality ones, custom fitted to your Commodore computers.

Available singly or as a matched set in beautiful brown simulated leather.

Commodore 64 and Vic 20 are registered trademarks of Commodore Computer Company.

VICreations

Dan Carmichael, Submissions Editor

The Indexer

This month's offering presents a small data base program, "The Indexer." Designed as an index for COMPUTE!'s GAZETTE articles, it can be used for a variety of purposes. It runs on any size VIC-20 and the Commodore 64.

If you're like me, you probably keep your back issues of COMPUTE!'s GAZETTE. There's a wealth of reference material in each issue. The only problem is remembering just what issue contains that article you so desperately need.

This month, we'll look at a small data base program that allows you to keep an index of articles or books that are of interest to you. "The Indexer" stores such information as magazine (or book) name, subject matter, article title, month and year of issue, page number, and the type of computer the article applies to. It can also search for that article by subject, article name, magazine name, and type of computer.

Storing Data In The Program

The Indexer is *machine independent*—it does not store data on a peripheral device such as a tape cassette or disk drive. Information is read into the program from DATA statements and is stored within the program in an array. If you study it carefully, you'll see some useful array and table look-up techniques.

Each DATA statement you enter must include the following six elements in order, and each entry should be separated by a comma.

DATA *magazine name, article title, subject, month.year, page number, type of computer*

Be careful when entering the DATA statements—a misplaced or forgotten comma will cause errors when the program is run. Be sure not to use commas or colons when typing in the article titles.

How To Use The Indexer

Type in the program, carefully watching all cursor control characters, and save it to tape or disk before running. The five DATA statements at the end of the program are optional, included only as examples of the DATA statement format. If you wish to begin your own data base, you can replace the DATA statements from line 901 on.

Each time you add or delete DATA statements from the program, change the value of the variable N in line 900. This variable represents the exact number of DATA statements included. If you number consecutively, beginning at line 901, it will be easy to figure out how many DATA statements there are. And anytime you update your program, you should SAVE a copy to tape or disk.

Once the program is running, you'll be prompted to select the target of your search. You can search for article subject, article name, name of magazine, or type of computer. To start the search, press the indicated function key. You'll then be asked for the target of your search. Just enter the search keyword, press RETURN, and the program will perform the table search.

If you're using the program with an unexpanded VIC, memory will become a problem as you add DATA statements. String arrays—the kind used in this program to store data—use a lot of memory. In addition, the DATA statements take up six bytes plus one byte per character. If you accumulate a lot of data, an expander cartridge will come in handy. The Indexer is written to run on a VIC with any memory configuration, as well as on the Commodore 64.

Tips For Data Entry

Subject: Your searches will usually be done by article subject, so keep this category as broad as possible. For example, let's say you want to index various articles about game paddles. Enter all of them with the subject "paddles," even if some are about drawing with paddles and others about using them in games. That way, when you enter "paddles" as the target of your search, the index of *all* articles on this subject will be displayed.

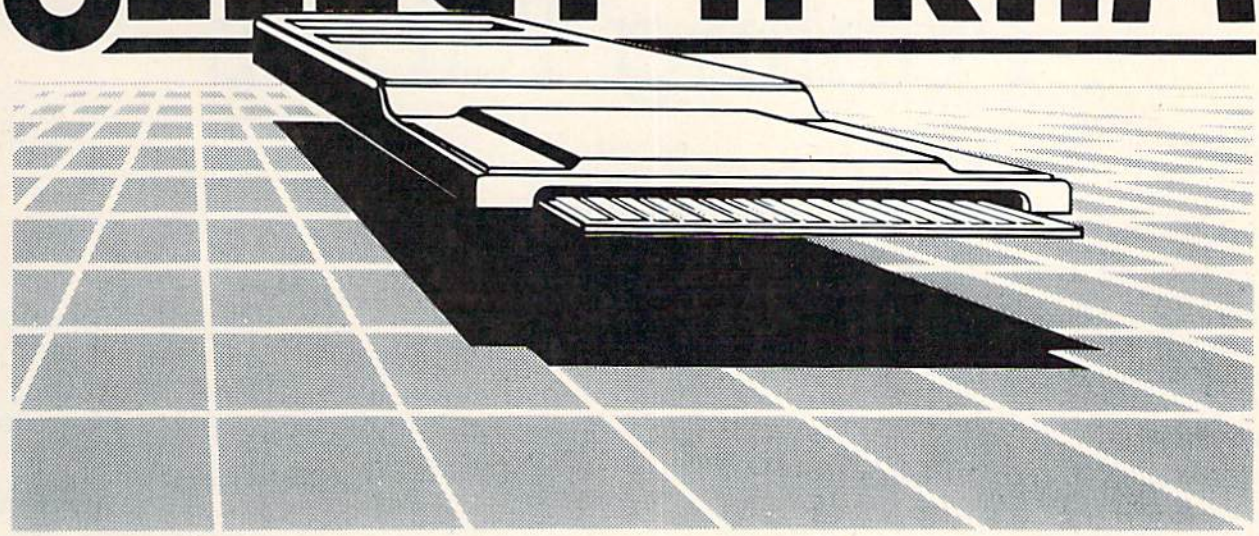
Spelling: Watch your spelling, and be consistent with your subject category names. For example, don't enter one subject as "paddle" and another as "paddles." The computer will see these as two completely different categories.

Memory: As stated before, The Indexer can use a lot of memory, so you might want to abbreviate article titles. For example, the GAZETTE column "Machine Language For Beginners" could be entered as "ML For Beginners" or even "Beg ML."

Although this program was written as an article index, it can be adapted for other uses. The data base has six elements and can search by any of four variables. It could be easily adapted for other uses such as a birthday reminder or an electronic phone book. The applications are up to you.

See program listing on page 151.

64K for VIC 20
SELECT·A·RAM



SELECT·A·RAM BRINGS TO YOUR VIC 20 THE POWER THAT ONLY MEMORY CAN PROVIDE.

The power of any computer is measured by its memory capacity. The more memory you have, the more powerful your programs can become.

SELECT·A·RAM gives your VIC 20 the power of memory. 65,536 bytes of power to be exact. Enough programming power to rival any Home computer.

The power hungry programmer can also add more memory. Each of SELECT·A·RAM's two expansion slots will accept any amount of memory from 3K to 128K.

SELECT·A·RAM's powerful expansion capabilities are made possible by a technique we call Soft Select. Soft Select allows your VIC 20 to perform many sophisticated functions not possible with other memory expansion devices, ie., disk drive emulation, printer spooling, simultaneous and interactive program execution (to name just a few of our soon to be released packages).

Bring the power of memory to your VIC 20 . . . . . with SELECT·A·RAM.

Call or write for additional information and the dealer nearest you. Direct orders accepted.

DEALERS INQUIRIES INVITED

Vic 20 is a Trade Mark of Commodore Electronics Limited.

SELECT·A·RAM

- 64K Memory
- Two Expansion Slots
- Write Protection
- Reset Swjtch
- Expandable with 64K and 128K Modules
- Soft Select Control
- Compatible with All Program Cartridges and Hardware Devices
- Provision for Optional External Power
- One Year Limited Warranty

Printing Tables

Pat Slater

If you've discovered a clever, time-saving technique, or a brief but effective programming shortcut, send it to "Hints & Tips," c/o COMPUTE!'s GAZETTE. *If we use it, we'll pay you $35.*

One of the limitations of Commodore BASIC is the total lack of formatted PRINT statements. If you're used to PRINT with format or PRINT USING, it may seem impossible to print neatly aligned tables with Commodore BASIC.

The language does provide TAB and SPC functions for screen displays, but both simply space over when used to print to a printer or a file with PRINT#. The programs I've included will format for screen or printer, depending on your input. They're especially helpful for use with formatting printed output. Let's look at an example:

```
PRINT A$;TAB(20);B$
```

prints B$ starting in column 20 regardless of the size of A$, but

```
PRINT#4,A$;TAB(20);B$
```

prints A$, skips 20 spaces from the end of A$, then prints B$. There's no telling where B$ will end up unless you know the size of A$. This being the case, you must find a way to count spaces when doing formatted printout.

One way to count spaces is to use the LEN function. For example, the statement below will place A$ in column 1, B$ in column 15, and C$ in column 30:

```
PRINT#4,A$;TAB(14-LEN(A$));B$;TAB(14-LEN
  (B$));C$
```

The following program uses the LEN function to align rows of names:

```
3 PRINT"{CLR}SCREEN OR PRINTER S OR P":IN
  PUT I$                              :rem 151
4 IF I$<>"S"AND I$<>"P"THEN3          :rem 241
5 IFI$="S"THENJ=3:GOTO8               :rem 153
6 J=4                                 :rem 241
8 OPEN4,J                              :rem 20
10 FOR I=1 TO 5                       :rem 215
20 READ A$,B$:IFI$="S"THEN35           :rem 22
30 PRINT#4,A$;TAB(10-LEN(A$));B$:GOTO40
                                      :rem 214
35 PRINT#4,A$;SPC(10-LEN(A$));B$      :rem 19
40 NEXT I                             :rem 236
50 DATA WATTS, SORENSON, MATTHEWS, NG, JO
   NES                                :rem 186
60 DATA BURL, YATES, RUVALDS, KING, REDLA
   SIK                                :rem 132
```

When executed, the program prints:

```
WATTS       SORENSON
MATTHEWS    NG
JONES       BURL
YATES       RUVALDS
KING        REDLASIK
```

If you use this method to align numbers (along with STR$ to convert the numbers to strings), several problems pop up as shown in the next example:

```
3 PRINT"{CLR}PRINTER OR SCREEN P OR S":IN
  PUTI$                               :rem 151
4 IF I$<>"P"ANDI$<>"S"THEN 3          :rem 241
5 IF I$="S"THENK=3:GOTO8              :rem 154
6 K=4                                 :rem 242
8 OPEN4,K                              :rem 21
10 FOR N=1 TO 5                       :rem 220
20 READ I,J:IFI$="S"THEN35            :rem 222
30 PRINT#4,I;TAB(8-LEN(STR$(I)));J:GOTO40
                                      :rem 199
35 PRINT#4,I;SPC(8-LEN(STR$(I)));J :rem 4
40 NEXT N                             :rem 241
50 DATA 78.66, 40.00, 139.30, -77.22, 200
   0.00                               :rem 213
60 DATA -142.91, 6.56, 12.50, 521.12, 9.9
   9                                   :rem 83
```

This program prints:

```
 78.66        40
 139.3       -77.22
 2000        -142.91
 6.56         12.5
 521.12       9.99
```

Notice that the numbers are aligned on the left (at the sign position) rather than by decimal point, and that trailing zeros are lost after the decimal point. To make the individual numbers appear in the correct format (40 as 40.00, for example) you can convert them to strings as follows:

```
I$=STR$(INT(I))+"."+RIGHT$(STR$(I*100),2)
```

The first term gets the integer part of the number, next the decimal is added, and finally it is necessary to multiply by 100 and grab the last two digits to keep from losing trailing zeros.

Once you have the number in correct format, use the LEN function to count spaces and tab *before* printing each number as shown in the example below:

```
3 PRINT"{CLR}SCREEN OR PRINTER S OR P":IN
  PUT U$                              :rem 163
4 IF U$<>"S"ANDU$<>"P"THEN3           :rem 9
5 IF U$="S"THENK=3:GOTO8              :rem 166
6 K=4                                 :rem 242
8 OPEN4,K                             :rem 21
10 FOR N=1 TO 5                       :rem 220
20 READ I,J                           :rem 61
22 I$=STR$(INT(I))+"."+RIGHT$(STR$(I*100)
  ,2)                                 :rem 140
24 J$=STR$(INT(J))+"."+RIGHT$(STR$(J*100)
  ,2)                                 :rem 145
30 PRINT#4,""TAB(8-LEN(I$));I$;TAB(17-LEN
  (J$));J$                            :rem 200
40 NEXT N                             :rem 241
50 DATA 78.66, 40.00, 139.30, -77.22, 200
  0.00                                :rem 213
60 DATA -142.91, 6.56, 12.50, 521.12, 9.9
  9                                   :rem 83
```

Now you get the printed numbers aligned by decimal position:

78.66	40.00
139.30	−78.22
2000.00	−143.91
6.56	12.50
521.12	9.99

Using LEN to count spaces this way allows you to print neat-looking tables of words and/or numbers. Though a lot of functions are involved, it doesn't take nearly as much time as the printout process, so it won't slow down your program.

YOU HAVE BEEN GIVEN $25,000
TO START YOUR OWN

SHOVEL FACTORY

WITH YOUR C-64®

Do you have enough BUSINESS SAVVY to:
*Buy supplies *Buy equipment *Manage inventories.....?

CHARLES BRANNON
PROGRAM EDITOR

Apple recently reduced the price of its Lisa to around $8000. Lisa, whose acronym supposedly stands for Local Integrated Software Architecture, was actually just the in-house code name for the machine (insiders claim it was named after a girlfriend of Steve Wozniak, Apple co-founder). The name of the machine was leaked so extensively that Apple was forced to market with the code name, hence the apocryphal acronym.

Lisa is a dedicated workstation with a mouse, ultra-high resolution graphics, and icons (pictorial diagrams). "Dedicated workstation" means that there is one user per computer, rather than many users sharing a large computer via separate terminals. The advantage of a dedicated workstation is its exclusivity, privacy, and speed of access. The entire power of the computer can be dedicated to one user, rather than spread out among many. This is the primary concept behind so-called personal computers.

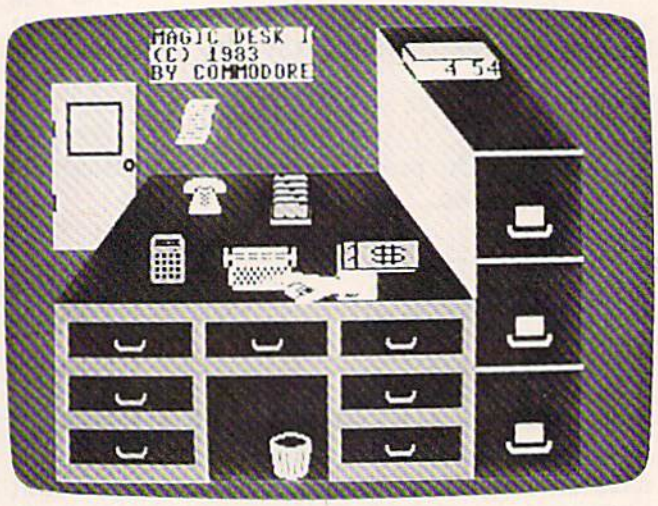
The disadvantage of dedicated systems surfaces in environments where people need to share and exchange information. That is why Local Area Networks (LANs) are hooking up these small computers, usually to a central hard disk. A LAN doesn't violate the concept of personal computers; it just broadens their communication capabilities. Some companies are going too far, though, and we are seeing expensive business microcomputers which are mediocre mimics of the large, powerful, but impersonal minicomputers and mainframes.

Apple claims you can start using Lisa within 20 minutes, without any instruction manuals. If you remember your first experience with a computer, you may be inclined to doubt this. Yet there's something new here. Apple has drawn on the experience of research at Xerox's Palo Alto Research Center (PARC). The Lisa is an intuitively understandable system.

Most of this "user-friendliness" (to use a term that has become banal in the industry) comes from Lisa's linked menus. The menus lead you from one option to another and are primarily pictorial, drawing on the Lisa's very high resolution capability (pun somewhat intended).

A highly visible characteristic of the Lisa is the mouse, used to make selections as you move the cursor about. The idea is the same as a joystick or trackball (some mouses are merely upside-down trackballs). Using the mouse is supposed to be more natural than pressing cursor control keys. Many people complain that the mouse is a gimmick, taking up extra desk space and requiring you to take your hands away from the keyboard to move the cursor.

Both hardware and software companies were impressed by and envious of the Lisa. Lisa was really a new product, an innovation in an industry of "me, too" computers and software. Well, the copycats didn't waste any time. Companies began developing their own integrated software, complete with icons, windows, and even mouses. The effort is Promethean, as companies try to bring the $8000 capability of the Lisa to your $2000 micro (of course, they charge you only $800 to $1000 for the software).



Preparing to type with Magic Desk I.

Commodore's Reaction: Magic Desk I

Commodore also caught icon-fever. At the January 1983 Consumer Electronics Show (CES), they introduced Magic Desk I, a software package for the 64 which was not available until around November. The price is down-to-earth, with a suggested retail of $60–$70. What Commodore and others (Microsoft [Windows], VisiCorp [Visi On], Quarterdesk Software [DesQ]) seem to forget is that Apple spent the equivalent of a hundred man-years developing Lisa. Some integrated pro-

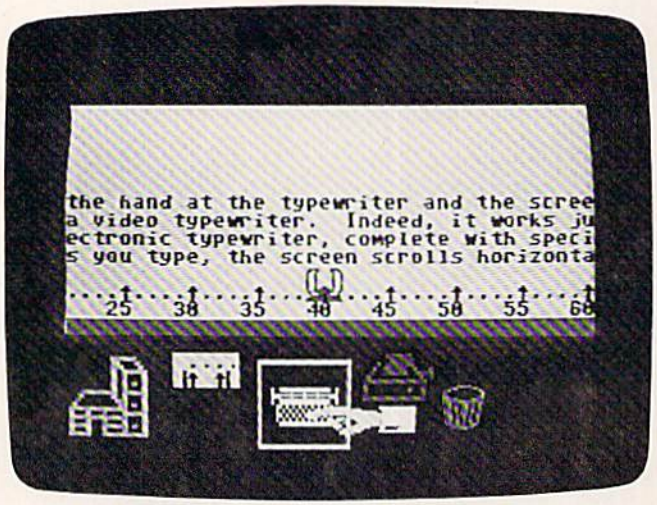
grams may be capable, others might just copy Lisa's gimmicks.

Magic Desk may be right for some people, but it's not for everyone. When you plug in the Magic Desk cartridge and turn it on, a picture of a desk appears. On top of the desk are several icons: pictures of a typewriter, telephone, calculator, card file, and ledger. Under the desk is a wastebasket, and to the right is a filing cabinet. A digital clock on top of the filing cabinet keeps time. A door to the left "opens" the way to new applications. Above this scene hovers a ghostly hand, your cursor.



the hand at the typewriter and the scree
a video typewriter. Indeed, it works ju
ectronic typewriter, complete with speci
s you type, the screen scrolls horizonta
25 30 35 40 45 50 55 60

Creating text in the typewriter mode.

With the joystick, you move the hand to the appropriate picture and press the fire button to select it. Magic Desk I supports only a few of the icons: the typewriter, wastebasket, filing cabinet, and digital clock. Magic Desk II will support the ledger (spreadsheet) and the calculator. Presumably, the phone will be used with a modem, and the card-file as a simple data base manager.

Point the hand at the typewriter and the screen transforms into a video typewriter. Indeed, it works just like a modern electronic typewriter, complete with special effects. As you type, the screen scrolls horizontally. The margins are always visible, and you can change them at any time. With the function keys you can set, clear, and move to tab stops. When you press RETURN, the paper pops up a line and the typeball whirs to the beginning of the next line, complete with sound effects. This is perhaps a bit too cute.

After you type your letter, you can return to the desk and file the letter. With the hand, you can open one of the three file cabinets. Each cabinet holds ten file folders, each of which can hold ten pages of text. What you are really doing is loading and saving your files to disk, but this is supposedly transparent. You just select a folder, name it if you like, put your typing into it, or retrieve a page from it. Any of these operations will cause a picture of the disk drive to appear, and the actual drive will whir and click a surprisingly long time, considering that you are only trying to file one page. I found this quite frustrating.

This is also where Magic Desk gets confusing. None of the icons are labeled, so it's like reading those pictorial traffic signs in a foreign country. If you get stuck, you can press the Commodore logo key and a help screen will appear. The icons you are using will be named; you can select any of them with the hand to get a more complete description.

I found Magic Desk novel and rather easy to use, though the pictures are both a blessing and a curse (I would prefer an English menu of choices). What you gain in ease of use and intuitive operation, you lose in power, speed, and efficiency. Compared with the "old way" of doing things, Magic Desk is limited once you're no longer a beginner. It slows you down as you pursue a task through a chain of menus. The video typewriter has almost none of the advantages of a true word processor. It's just like an IBM Selectric. You don't have to learn anything, but you don't have a tenth of the flexibility and power of even a mild-mannered word processor. Apparently, this is not a problem in Commodore's eyes. Indeed, the press release sells this similarity, emphasizing a typewriter is not a word processor, and implies you're better off that way.

Nonetheless, Magic Desk can be an excellent nonintimidating way to learn to use a computer. Magic Desk may change the mind of anyone who "hates computers." It lets you perform basic computer tasks with a minimum of fuss, and can lead you into more powerful applications later. Despite its limitations, Magic Desk points the way to the future of home computer software.

Commodore 64 and VIC-20

SuperTerm

$149.95

Telecommunications with a difference!

Unexcelled communications power and compatibility, especially for professionals and serious computer users. Look us over; **SuperTerm** isn't just "another" terminal program. Like our famous Terminal-40, **it's the one others will be judged by.**

- **EMULATION**—Most popular terminal protocols: cursor addressing, clear, home, etc.
- **EDITING**—Full-screen editing of Receive Buffer
- **UP/DOWNLOAD FORMATS**—CBM, Xon-Xoff, ACK-NAK, CompuServe, etc.
- **FLEXIBILITY**—Select baud, duplex, parity, stopbits, etc. Even work off-line, then upload to system!
- **DISPLAY MODES**—40 column; 80/132 with side-scrolling
- **FUNCTION KEYS**—8 standard, 52 user-defined
- **BUFFERS**—Receive, Transmit, Program, and Screen
- **PRINTING**—Continuous printing with Smart ASCII interface and parallel printer; buffered printing otherwise
- **DISK SUPPORT**—Directory, Copy, Rename, Scratch

Options are selected by menus and EXEC file. Software on disk with special cartridge module. **Compatible with CBM and HES Automodems**; select ORIG/ANS mode, manual or autodial.

Write for the full story on SuperTerm; or, if you already want that difference, order today!

Requires: Commodore 64 or VIC-20, disk drive or Datasette, and compatible modem. VIC version requires 16K memory expansion. Please specify VIC or 64 when ordering.

Smart ASCII Plus . . . $59.95

The only interface which supports streaming —sending characters simultaneously to the screen and printer — with SuperTerm.

Also great for use with your own programs or most application programs, i.e., word processors. **Print modes:** CBM Graphics (w/many dot-addr printers), TRANSLATE, DaisyTRANSLATE, CBM/True ASCII, and PIPELINE.

Complete with printer cable and manual. On disk or cassette.

VIC 20 and Commodore 64 are trademarks of Commodore Electronics, Ltd.

SIMPLE ANSWERS TO COMMON QUESTIONS

TOM R. HALFHILL, EDITOR,
COMPUTE!'s PC & PCjr Magazine

Q A

Each month, COMPUTE!'s GAZETTE *will tackle some questions commonly asked by new VIC-20/Commodore 64 users and by people shopping for their first home computer.*

Q. ***I've heard about emulators available for the Commodore 64 that allow it to run all Apple software and software for other computers, too. I've seen some magazine advertisements by mail-order companies for emulators. Do you plan to review any of these emulators?***

A. We haven't reviewed any emulators because, at this writing, they simply don't exist. Furthermore, we urge readers to be cautious about emulators—a lot of misinformation is circulating.

We, too, have heard all the stories about Apple emulators for the Commodore 64, and have seen the ads in magazines. Usually we telephone the company advertising the emulator and try to obtain one for testing and review purposes. Almost always the response is something like, "They'll be ready for delivery within a few weeks." Then several months go by, and still no emulator. Some companies have been promising to deliver emulators for more than a year. We have yet to see one.

Heed this advice: *Do not order or buy an emulator unless you first see an actual, working model.* Otherwise, you will probably be disappointed.

Why are we so emphatic? Because true emulation of another computer is not something that is easily accomplished. There are hundreds of problems to be overcome, especially when designing something like an Apple emulator for the Commodore 64. Yet, some companies persist in promising—and even advertising—Apple emulators.

Nearly all these emulator rumors can be indirectly traced to a statement made by Commodore back in early 1982. At that time, Commodore hinted that it intended to introduce a personal computer that could emulate other popular computers on the market, such as the Apple and Atari. A widely read article to this effect was published in the *Wall Street Journal*. Everyone was excited by the prospect, but eventually Commodore quietly shelved the idea—probably because it was too hard to accomplish at an affordable price.

In the meantime, the Commodore 64 was introduced. Unfortunately, some people jumped to the conclusion that this was the "chameleon computer" Commodore had hinted about. Within a few months, independent companies began announcing and even advertising Apple emulators for the 64. The idea of an Apple emulator was very attractive to new 64 owners because almost no software was available for the computer. But there are formidable obstacles to making an Apple emulator for the 64.

It's true that the computers are superficially similar—both are 40-column color computers with 64K Random Access Memory (RAM), Microsoft BASIC, and compatible microprocessor chips (the 6502/6510). But the memory maps are quite different, and the Apple lacks many of the 64's special features (sprites, 16-color high-resolution graphics, polyphonic synthesized sound, etc.). This is important because much commercial software these days is written entirely in machine language, including almost all games. ML programs are specific to the memory configuration of the machine on which they were written. Even seemingly slight changes to the native computer's operating system or memory layout (such as adding expanders to a VIC-20) can render some ML programs unusable. The problems of emulating a totally foreign computer are infinitely greater.

Even if an Apple emulator were developed, there would be one more problem. Almost all Apple software is published on floppy disks. The Commodore Disk Operating System (DOS) is incompatible with the Apple DOS. And the data is stored in different formats. An Apple emulator would do you no good unless you also had an Apple disk drive emulator. This would almost certainly require that you buy a separate disk drive and compatible interface cables.

In the meantime, let the buyer beware. We heard of one person who paid more than $100 for an "Apple emulator" for his 64 and got nothing more than a cable which allowed BASIC programs to be transferred between the computers. The task of translating the programs so they would run on the 64 was left up to him, of course.

PROGRAMS DESCRIPTION

ENTECH

LEADER IN SOFTWARE FOR THE COMMODORE 64

BUSINESS

Integrated

MANAGEMENT SYSTEM 64 — This integrated business program gives you the computer power once reserved for large corporations. It stores the names of items, prices, item numbers and does all calculations including tax, shipping costs and discounts. It prints invoices and packing slips in addition to short-term and long-term reports. Management System 64 even prints mailing labels from customer files. Know what's selling, whose buying and forget costly, time consuming inventory close downs. **$69.95**

Finance

FINANCE CALC 64 — The leader in business and home financial analysis. You can have up to 1440 itemized expenses and print 1085 different financial reports and bar graphs as it stores and compares up to 12 different budgets at once. This powerful program is a must for the rising entrepreneur. **$49.95**

File

DATA BASE 64 — A perfect record system for any business or home. It can store up to 1200 records for each file. Each record has a capability of 20 fields of information. The program has multi-level sorting which facilitates quick and easy recalling of information and printing of labels and reports. It even allows you to create personal print formats. Data Base 64 also can be used with popular word processing programs. $59.95

HOME

3 in 1

FAMILY PAC — Three of the finest home programs available: **$59.95**

- **CHECKBOOK SYSTEM 64** — This easy to use program makes the balancing of confusing checkbook finances a breeze. It handles over 1300 transactions of up to 40 expense categories. Checkbook System 64 also prints statements, reports and all types of checks. Pay your bills by computer! Also available as a separate program. $39.95

- **RECIPE KEEPER 64** — This program is a handy kitchen aid that does more that just file. It can print out ingredients and directions, as well as calculate ingredient amounts for different serving sizes. The program comes complete with a mini-word processing section that enables you to type in up to 14 lines of directions. $39.95

- **SPACE MATH 64** — This educational program makes addition, substraction, multiplication and division learning fun and entertaining for youngsters. Solve math problems, explore the universe, dance to the music and watch the show. $29.95

ENTERTAINMENT

Music

STUDIO 64 — Roll over Beethoven, now anyone can create music as expressive and sophisticated as the most advanced programmers!! With Studio 64, the computer does all the work while you play and enjoy. It is the only music program available that allows you to create music without any programming knowledge. Just play and the computer will instantly write the music on the screen. Enter up to 3 voices and choose from 4 wave forms on any voice. Play your compositions at different speeds and filter settings with synthesized drum rhythms! It will save and recall, add music to your own programs and print lead sheets. Music is only as far away as your C64. Disk/Cass. $39.95

Art

GAME DESIGNER 64 — This package contains everything you need to design colorful game characters, backgrounds and entire screens. Animate up to 16 sprites on the background of your choice. Add it to your own program. The limits are your own creativity. Combine it with Studio 64 to create any game imaginable. Power game sub-routine included. Disk/Cass. $39.95

— All programs come in disk unless otherwise indicated. —

NEWS & PRODUCTS

New Printer From Commodore

Commodore has released a new printer, the MPS-801, which will replace the 1525. According to a source at Commodore, the MPS-801 is slightly faster than the 1525, features a cartridge ribbon, paper advance knob and button, and supports full-size paper. The printer also includes two serial ports to enable daisy chaining, and the printing mechanism has been relocated for a quieter sound. Price was not set at press time.

Quick Reference Guides For VIC And 64

John Wiley & Sons has published *Quick Reference Guides* for the VIC, 64, and Timex 1000 computers, similar to the guides the company previously published for the IBM PC, Apple II, and Atari 800.

The 6 × 12-inch four-panel guides list and define such items as BASIC statements, system controls, memory statements, video and graphic controls, and other topics.

The guides are available for $2.95 each.

VIC-20 Typing Tutorial

Mastertype, a typing tutorial from Brøderbund, is now available for the VIC-20 in a cartridge format.

The tutorial consists of 18 progressive lessons set within a game format. You defend a spaceship from a barrage of letters or words by correctly typing them as rapidly as possible.

Lessons may be saved on either disk or cartridge for future use. Included are an illustrated instruction manual, hints for winning the game, and directions for creating your own customized lessons to improve typing and spelling.

The VIC-20 cartridge version of *Mastertype* sells for $39.95.

Twin-Disk Adventure Game For 64

Cyberworld, a two-disk, interactive keyboard/joystick adventure game for the Commodore 64, has been produced by Progressive Peripherals & Software.

The player's mission is multilayered, set on the planet Cyber, and includes full use of the 64's sprite capabilities. There are three subadventures, which begin with the hijacking of a Drokon warship and advance to a defense of the planet. The final mission is a hunt-and-tracking game.

Available only on diskettes, the program is available for $39.95.

Denver, CO 80222
(303) 759-5713

Music, Business, Personal Programs For 64

M'Soft has developed several new programs for the Commodore 64 on disk.

Smart ($79.95) features five different programs, all of which load from one main menu: word processing, money management, amortization, record keeping, and time management.

Wallstreet Microscope ($99.95) offers price and financial analysis of common stocks, with each stock rated against ten criteria. It is available with a ten-year history of Fortune 500 companies.

Musicwriter-64 ($69.95) is a music-composing, editing, and playing program that also prints sheet music for compositions created using the system.

VIC And 64 Spreadsheet

BEC, a spreadsheet analysis program for the entrepreneur, has been developed by Lawco, Ltd., for the VIC and 64.

The program computes the break-even point for new products by using the product's expense data. It also uses the product's sales price to compute a break-even sales quantity or the quantity produced to figure a break-even sales price.

Total fixed costs, total variable costs, and sales revenue at the break-even point are also computed. Multiple break-even points can be produced by varying the sales price, the production quantity, and/or the cost figures.

BEC is available at $79.95 on tape and $89.95 on disk.

Action Game For 64 With Disk Drive

Crazy Conveyors, produced by Bytes and Bits, is a machine language action game for the Commodore 64 with disk drive.

The game uses multicolor sprites, custom characters in 11 different colors for building blocks, ladders, fire poles, rotating pulleys, moving conveyors, and bonus boxes. *Crazy Conveyors* also uses three-part harmony and is playable with joystick or keyboard.

The game contains the Screen Creator which expands the game disk and other disks for additional screens.

The price for the game is $29.95.

Cassette Copier For VIC And 64

T & M Products has produced a Data Cassette Copier, which allows all cassettes to be duplicated by interfacing two Datassette recorders with a Commodore 64 or a VIC-20 computer.

The Data Copier will duplicate all programs and load machine language programs without using VICMON. A Micro-speaker plus LED allows you to monitor the data by sight and sound.

The Data Copier is available for $24.95 plus $2 shipping and handling. Power is supplied by the computer at the cassette port, so no batteries are required.

De Soto, TX 75115

Math Drill Program

Let's Learn Math, a menu-driven addition and subtraction drill program for the Commodore 64,

has been released by Micro-Systems Software.

The program has four levels of difficulty and is designed for youngsters age 6 to 12. All problems are solved column by column. The need for pencil and paper is eliminated. Right and wrong answers are flagged, and the correct answer is displayed if the entry was wrong. At the end of each session, a report of the number of correct and incorrect entries is displayed.

Let's Learn Math is available on tape for $12.95.

COMPUTE!'s GAZETTE *welcomes announcements of new products for VIC-20 and Commodore 64 computers, especially products aimed at beginning to intermediate users. Please send press releases and photos well in advance to: Tony Roberts, Assistant Managing Editor,* COMPUTE!'s GAZETTE, *P.O. Box 5406, Greensboro, NC 27403.*

New product releases are selected from submissions for reasons of timeliness, available space, and general interest to our readers. We regret that we are unable to select all new product submissions for publication. Readers should be aware that we present here some edited version of material submitted by vendors and are unable to vouch for its accuracy at time of publication.

VIC 20™/COMMODORE 64™

CRAZY CONVEYORS™-combines the powerful capabilities of the Commodore 64 with disk drive in an exciting action-packed game with multi-color sprites, custom characters in 11 different colors for building blocks, ladders, fire poles, rotating pulleys, moving conveyors and bonus boxes; **three part harmony music**; high score history, with full names of 10 champions; action pause; start play at screen of your choice; joystick or keyboard; machine language. Also **Screen Creator™** to expand game disk and extra disks to virtually unlimited screens, and **CRAZY CONVEYOR action** to entertain and challenge the most skillful game player. Price: $29.95.

RIDGE RUNNER-for unexpanded VIC 20 on tape or disk. 100% machine language. Includes multicolor U.F.O., blinking mines, spinning asteroids, enemy ships, laser fire, horizontally scrolling playfield, hi-resolution/multicolor graphics, excellent sound, high score, pause button, bonus ships and ever increasing levels of difficulty. Joystick required. Price: $14.95.

DUNGEONS-for VIC 20 with 16K expansion and tape or disk. Explore a 12 level dungeon with 1200 rooms. Purchase weapon and armor, find treasures, battle over fifty types of monsters, cast spells and save game to tape or disk. Excellent sound and three dimensional graphics. Price: $14.95.

PAK ALIEN-for unexpanded VIC 20 with tape or disk. 100% machine language. Includes seven evil aliens, bonus timer, pause feature and 100 levels of increasing difficulty. Joystick or keyboard. Price: $14.95.

INVESTMENT PORTFOLIO MANAGER-for Commodore 64 with disk drive or tape (printer optional), is menu driven and provides one summary page and nine detail pages. Each page can accept nine entries of up to $99,999 each. The program can handle over $8 million. The IPM is quick and makes it easy to track volatile assets such as stocks and stock options. The summary page displays the grand total and the percent of grand total for each of nine investment categories. Price: $14.95.

DISK DIRECTORY MANAGER for Commodore 64 or VIC 20 (16K min. exp.) with 1540/41 disk drive and 1525 printer. 100% machine language. This handy utility reads directories of diskettes and sorts up to 1556 records on the Commodore 64. In most cases the sort is completed in only a few seconds. Each record contains file name, file size, file type and disk ID. The sorted master directory is sent to the printer. Price: $19.95.

SmartVoice™

NEW

A breakthrough in voice technology for the Vic 20 and Commodore 64 computers. This unit is not just another voice synthesizer. The quality is fantastic and it requires no peeks, no pokes, no phonemes, no interface cables, no power cords, no text editors or programs of any kind, and installs in just 2 seconds. Say anything you like with simple print statements, such as:

PRINT #2, "MY NAME IS SMARTVOICE"

That is all there is to it. You can talk fast or slow, use 63 pitch levels, create sound effects, sing songs, use automatic inflection and monotone modes, control volume by program or external knob, and more. A detailed user manual with demonstration programs included. Models for other computers also available.

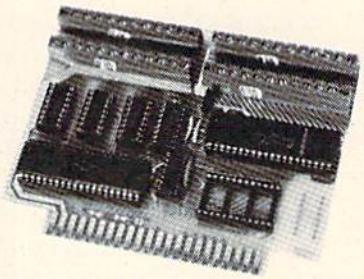
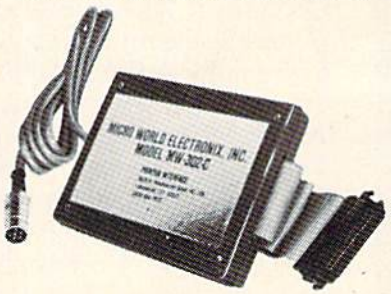
NEW!
Universal Input/Output Board for VIC-20/64



- 16 channel 8-bit A/D converter with 100 microsecond sampling time.
- 1 D/A output.
- 16 high voltage/high current discrete outputs.
- 1 EROM socket.
- Use multiple boards for additional channels up to 6 boards.

VIC-20 uses MW-311V $205.00
CBM-64 uses MW-311C $225.00

MW-302: VIC-20/64 Parallel Printer Interface.



Works with all centronics type parallel matrix & letter printers and plotters—Epson, C.Itoh, Okidata, Nec, Gemini 10, TP-I Smith Corona, and most others. Hardware driven; works off the serial port. Quality construction: Steel DIN connectors & shielded cables. Has these switch selectable options: Device 4, 5, 6 or 7; ASCII or PET ASCII; 7-bit or 8-bit output; upper & lower case or upper only. Recommended by PROFESSIONAL SOFTWARE for WordPro 3 Plus for the 64, and by City Software for PaperClip.

A Beginner's Guide To Typing In Programs

What Is A Program?

A computer cannot perform any task by itself. Like a car without gas, a computer has *potential*, but without a program, it isn't going anywhere. Most of the programs published in *COMPUTE!'s Gazette* for Commodore are written in a computer language called BASIC. BASIC is easy to learn and is built into all VIC-20s and Commodore 64s.

BASIC Programs

Each month, *COMPUTE!'s Gazette* for Commodore publishes programs for both the VIC and 64. To start out, type in only programs written for your machine, e.g., "VIC Version" if you have a VIC-20. Later, when you gain experience with your computer's BASIC, you can try typing in and converting certain programs from another computer to yours.

Computers can be picky. Unlike the English language, which is full of ambiguities, BASIC usually has only one "right way" of stating something. Every letter, character, or number is significant. A common mistake is substituting a letter such as "O" for the numeral "0", a lowercase "l" for the numeral "1", or an uppercase "B" for the numeral "8". Also, you must enter all punctuation such as colons and commas just as they appear in the magazine. Spacing can be important. To be safe, type in the listings *exactly* as they appear.

Brackets And Special Characters

The exception to this typing rule is when you see the curved bracket, such as "{DOWN}". Anything within a set of brackets is a special character or characters that cannot easily be listed on a printer. When you come across such a special statement, refer to "How To Type In *COMPUTE!'s Gazette* Programs."

About DATA Statements

Some programs contain a section or sections of DATA statements. These lines provide information needed by the program. Some DATA statements contain actual programs (called machine language); others contain graphics codes. These lines are especially sensitive to errors.

If a single number in any one DATA statement is mistyped, your machine could "lock up," or "crash." The keyboard and STOP key may seem "dead," and the screen may go blank. Don't panic – no damage is done. To regain control, you have to turn off your computer, then turn it back on. This will erase whatever program was in memory, *so always SAVE a copy of your program before you RUN it*. If your computer crashes, you can LOAD the program and look for your mistake.

Sometimes a mistyped DATA statement will cause an error message when the program is RUN. The error message may refer to the program line that READs the data. *The error is still in the DATA statements, though.*

Get To Know Your Machine

You should familiarize yourself with your computer before attempting to type in a program. Learn the statements you use to store and retrieve programs from tape or disk. You'll want to save a copy of your program, so that you won't have to type it in every time you want to use it. Learn to use your machine's editing functions. How do you change a line if you made a mistake? You can always retype the line, but you at least need to know how to backspace. Do you know how to enter inverse video, lowercase, and control characters? It's all explained in your computer's manuals.

A Quick Review

1) Type in the program a line at a time, in order. Press RETURN at the end of each line. Use backspace or the back arrow to correct mistakes.

2) Check the line you've typed against the line in the magazine. You can check the entire program again if you get an error when you RUN the program.

3) Make sure you've entered statements in brackets as the appropriate control key (see "How To Type *COMPUTE!'s Gazette* Programs" elsewhere in the magazine.)

We regret that we are not able to respond to individual inquiries about programs, products, or services appearing in COMPUTE!'s Gazette *for Commodore due to increasing publication activity. On those infrequent occasions when a published program contains a typo, the correction will appear in the magazine, usually within eight weeks. If you have specific questions about items or programs which you've seen in* COMPUTE!'s Gazette *for Commodore, please send them to Gazette Feedback, P.O. Box 5406, Greensboro, NC 27403.*

How To Type In *COMPUTE!'s Gazette* Programs

Many of the programs which are listed in *COMPUTE!'s Gazette* contain special control characters (cursor control, color keys, inverse video, etc.). To make it easy to know exactly what to type when entering one of these programs into your computer, we have established the following listing conventions.

Generally, any VIC-20 or Commodore 64 program listings will contain bracketed words which spell out any special characters: {DOWN} would mean to press the cursor down key. {5 SPACES} would mean to press the space bar five times.

To indicate that a key should be *shifted* (hold down the SHIFT key while pressing the other key), the key would be underlined in our listings. For example, S would mean to type the S key while holding the shift key. This would appear on your screen as a "heart" symbol. If you find an underlined key enclosed in braces (e.g., {10 N}), you should type the key as many times as indicated (in our example, you would enter ten shifted N's).

If a key is enclosed in special brackets, ⟨⟩, you should hold down the *Commodore key* while pressing the key inside the special brackets. (The Commodore key is the key in the lower left corner of the keyboard.) Again, if the key is preceded by a number, you should press the key as many times as necessary.

Rarely, you'll see a solitary letter of the alphabet enclosed in braces. These characters can be entered on the Commodore 64 by holding down the CTRL key while typing the letter in the braces. For example, {A} would indicate that you should press CTRL-A. You should never have to enter such a character on the VIC-20, but if you do, you would have to leave the quote mode (press RETURN and cursor back up to the position where the control character should go), press CTRL-9 (RVS ON), the letter in braces, and then CTRL-0 (RVS OFF).

About the *quote mode*: you know that you can move the cursor around the screen with the CRSR keys. Sometimes a programmer will want to move the cursor under program control. That's why you see all the {LEFT}'s, {HOME}'s, and {BLU}'s in our programs. The only way the computer can tell the difference between direct and programmed cursor control is the quote mode.

Once you press the quote (the double quote, SHIFT-2), you are in the quote mode. If you type something and then try to change it by moving the cursor left, you'll only get a bunch of reverse-video lines. These are the symbols for cursor left. The only editing key that isn't programmable is the DEL key; you can still use DEL to back up and edit the line. Once you type another quote, you are out of quote mode.

You also go into quote mode when you INSerT spaces into a line. In any case, the easiest way to get out of quote mode is to just press RETURN. You'll then be out of quote mode and you can cursor up to the mistyped line and fix it.

Use the following table when entering cursor and color control keys:

When You Read:	Press:	See:	When You Read:	Press:	See:	When You Read:	Press:	See:
{CLEAR}	SHIFT + CLR/HOME		{CYN}	CTRL + 4		⟨7⟩	C= + 7	
{HOME}	CLR/HOME		{PUR}	CTRL + 5		⟨8⟩	C= + 8	
{UP}	SHIFT + CRSR ↑		{GRN}	CTRL + 6		{F1}	f1	
{DOWN}	CRSR ↓		{BLU}	CTRL + 7		{F2}	SHIFT + f1	
{LEFT}	SHIFT + CRSR →		{YEL}	CTRL + 8		{F3}	f3	
{RIGHT}	CRSR →		⟨1⟩	C= + 1		{F4}	SHIFT + f3	
{RVS}	CTRL + 9		⟨2⟩	C= + 2		{F5}	f5	
{OFF}	CTRL + 0		⟨3⟩	C= + 3		{F6}	SHIFT + f5	
{BLK}	CTRL + 1		⟨4⟩	C= + 4		{F7}	f7	
{WHT}	CTRL + 2		⟨5⟩	C= + 5		{F8}	SHIFT + f7	
{RED}	CTRL + 3		⟨6⟩	C= + 6				

MLX Machine Language Entry Program

For Commodore 64 And VIC-20

Charles Brannon, Program Editor

MLX is a labor-saving utility that allows almost failsafe entry of machine language programs published in COMPUTE!'s GAZETTE. You need to know nothing about machine language to use MLX—it was designed for everyone. There are separate versions for the Commodore 64 and expanded VIC-20 (at least 8K). MLX was conceived and written by Program Editor Charles Brannon. Important: MLX is required to type in the machine language programs in this issue.

MLX is a new way to enter long machine language (ML) programs with a minimum of fuss. MLX lets you enter the numbers from a special list that looks similar to BASIC DATA statements. It checks your typing on a line-by-line basis. It won't let you enter illegal characters when you should be typing numbers. It won't let you enter numbers greater than 255 (forbidden in ML). It won't let you enter the wrong numbers on the wrong line. In addition, MLX creates a ready-to-use tape or disk file. You can then use the LOAD command to read the program into the computer, as with any program:

```
LOAD "filename",1,1   (for tape)
LOAD "filename",8,1   (for disk)
```

To start the program, you enter a SYS command that transfers control from BASIC to machine language. The starting SYS number always appears in the appropriate article.

Using MLX

Type in and save the correct version of MLX for your computer (you'll want to use it in the future). When you're ready to type in an ML program, run MLX. MLX asks you for two numbers: the starting address and the ending address. These numbers are given in the article accompanying the ML program.

You'll see a prompt corresponding to the starting address. The prompt is the current line you are entering from the listing. It increases by six each time you enter a line. That's because each line has seven numbers—six actual data numbers plus a *checksum number*. The checksum verifies that you typed the previous six numbers correctly. If you enter any of the six numbers wrong, or enter the checksum wrong, the computer rings a buzzer and prompts you to reenter the line. If you enter it correctly, a bell tone sounds and you continue to the next line.

MLX accepts only numbers as input. It you make a typing error, press the INST/DEL key; the entire number is deleted. You can press it as many times as necessary back to the start of the line. If you enter three-digit numbers as listed, the computer automatically prints the comma and goes on to accept the next number. If you enter less than three digits, you can press either the comma, SPACE bar, or RETURN key to advance to the next number. The checksum automatically appears in inverse video for emphasis.

MLX Commands

When you finish typing an ML listing (assuming you type it all in one session) you can then save the completed program on tape or disk. Follow the screen instructions. If you get any errors while saving, you probably have a bad disk, or the disk is full, or you've made a typo when entering the MLX program itself.

You don't have to enter the whole ML program in one sitting. MLX lets you enter as much as you want, save it, and then reload the file from tape or disk later. MLX recognizes these commands:

SHIFT-S: Save	**SHIFT-N: New Address**
SHIFT-L: Load	**SHIFT-D: Display**

When you enter a command, MLX jumps out of the line you've been typing, so we recommend you do it at a new prompt. Use the Save command to save what you've been working on. It will save on tape or disk as if you've finished, but the tape or disk won't work, of course, until you finish the typing. Remember what address you stop at. The next time you run MLX, answer all the prompts as you did before, then insert the disk or tape. When you get to the entry prompt, press SHIFT-L to reload the partly completed file into memory. Then use the New Address command to resume typing.

To use the New Address command, press SHIFT-N and enter the address where you previously stopped. The prompt will change, and you can then continue typing. Always enter a New Address that matches up with one of the line numbers in the special listing, or else the checksum won't work. The Display command lets you display a section of your typing. After you press SHIFT-D, enter two addresses within the line number range of the listing. You can abort the listing by pressing any key.

The special MLX commands may seem a bit confusing, but as you work with MLX, they will become valuable. For example, what if you forgot where you stopped typing? Use the Display command to scan memory from the beginning to the end of the program. When you reach the end of your typing, the lines will contain a random pattern of numbers. When you see the end of your typing, press any key to stop the listing. Use the New Address command to continue typing from the proper location.

You can use the Save and Load commands to make copies of the completed program. Use Load to reload the tape or disk, then insert a new tape or disk and use Save to make a new copy.

Be sure to save MLX; it will be used for future ML programs in COMPUTE!'s GAZETTE.

See program listings on page 177.

The Automatic Proofreader

"The Automatic Proofreader" will help you type in program listings from COMPUTE!'s Gazette without typing mistakes. It is a short error-checking program that hides itself in memory. When activated, it lets you know immediately after typing a line from a program listing if you have made a mistake. Please read these instructions carefully before typing any programs in COMPUTE!'s Gazette.

Preparing The Proofreader

1. Using the listing below, type in the Proofreader. The same program works on both the VIC-20 and Commodore 64. Be very careful when entering the DATA statements — don't type an l instead of a 1, an O instead of a 0, extra commas, etc.

2. SAVE the Proofreader on tape or disk at least twice *before running it for the first time.* This is very important because the Proofreader erases this part of itself when you first type RUN.

3. After the Proofreader is SAVEd, type RUN. It will check itself for typing errors in the DATA statements and warn you if there's a mistake. Correct any errors and SAVE the corrected version. Keep a copy in a safe place — you'll need it again and again, every time you enter a program from COMPUTE!'s Gazette.

4. When a correct version of the Proofreader is RUN, it activates itself. You are now ready to enter a program listing. If you press RUN/STOP-RESTORE, the Proofreader is disabled. To reactivate it, just type the command SYS 886 and press RETURN.

Using The Proofreader

All VIC and 64 listings in COMPUTE!'s Gazette now have a *checksum number* appended to the end of each line, for example ":rem 123". *Don't enter this statement when typing in a program.* It is just for your information. The rem makes the number harmless if someone does type it in. It will, however, use up memory if you enter it, and it will confuse the Proofreader, even if you entered the rest of the line correctly.

When you type in a line from a program listing and press RETURN, the Proofreader displays a number at the top of your screen. *This checksum number must match the checksum number in the printed listing.* If it doesn't, it means you typed the line differently than the way it is listed. Immediately recheck your typing. Remember, don't type the rem statement with the checksum number; it is published only so you can check it against the number which appears on your screen.

The Proofreader is not picky with spaces. It will not notice extra spaces or missing ones. This is for your convenience, since spacing is generally not important. But occasionally proper spacing *is* important, so be extra careful with spaces, since the Proofreader will catch practically everything else that can go wrong.

There's another thing to watch out for: if you enter the line by using abbreviations for commands, the checksum will not match up. But there is a way to make the Proofreader check it. After entering the line, LIST it. This eliminates the abbreviations. Then move the cursor up to the line and press RETURN. It should now match the checksum. You can check whole groups of lines this way.

Special Tape SAVE Instructions

When you're done typing a listing, you must disable the Proofreader before SAVEing the program on tape. Disable the Proofreader by pressing RUN/STOP-RESTORE (hold down the RUN/STOP key and sharply hit the RESTORE key). This procedure is not necessary for disk SAVEs, *but you must disable the Proofreader this way before a tape SAVE.*

SAVE to tape erases the Proofreader from memory, so you'll have to LOAD and RUN it again if you want to type another listing. SAVE to disk does not erase the Proofreader.

Replace Original Proofreader

If you typed in the original version of the Proofreader (October 1983 issue), you should replace it with the improved version below. We added a POKE to the original version to protect it from being erased when you LOAD another program from tape. The POKE does protect the Proofreader, and the Proofreader itself was not affected. However, a quirk in the VIC-20's operating system means that programs typed in with the Proofreader and SAVEd on tape cannot be LOADed properly later. If you LOAD a program SAVEd while the Proofreader was in memory, you see ?LOAD ERROR. This applies only to VIC tape SAVEs (disk SAVEs work OK, and the quirk was fixed in the Commodore 64).

If you have a program typed in with the original Proofreader and SAVEd on tape, follow this special LOAD procedure:

1. Turn the power off, then on.

2. LOAD the program from tape (disregard the ?LOAD ERROR).

3. Enter: POKE 45,PEEK(174):POKE 46,PEEK(175):CLR

4. ReSAVE the program to tape.

The program will LOAD fine in the future. We strongly recommend that you type in the new version of the Proofreader and discard the old one.

Bug-Swatter:
Modifications And Corrections

• In "Hardhat Climber" (January), the climber may accidentally jump when the joystick is pushed diagonally. Thanks to reader Stephen A. Ohayon for discovering this correction:

```
105 IF(JVAND16)=16THENJV=1:GOTO109:rem 62
```

If you want the climber to jump only when the joystick is in the neutral position, change the first 16 to a 31.

• The program listing of "Cave-In For VIC-20" (January) was inadvertently labeled "Cave-In For 64." The program will run only on the VIC-20.

• The Commodore 64 version of "MLX: Machine Language Entry Program" (December 1983) contained lines which were longer than the 80-character limit. Lines 160, 210, and 230 should be entered with abbreviated BASIC commands (P Shift-O for POKE, ? for PRINT). If you abbreviate, you will be able to type these lines within 80 characters, but the Proofreader rem numbers will appear to be incorrect. The program listing was corrected in the January version of MLX (see below).

• In correcting the problem described above, line 210 of MLX—64 Version (January) was split into two lines. But when line 215 was added, a closing parenthesis was omitted. To correct this, add a closing parenthesis to the end of line 215.

• Some readers have had difficulty using "The Assembler" (November 1983 "Machine Language For Beginners") to enter Programs 1 and 2 (December 1983), encountering ?EXTRA IGNORED errors on lines using indexed addressing. This is because Commodore BASIC will not accept commas in the middle of INPUT. Programs 1 and 2 were disassembled using the comma convention; readers who want to use The Assembler should type the program lines *without* commas. For example, instead of *STA 1024,Y* use *STA 1024Y*.

In addition, line 200 of The Assembler should have included an Automatic Proofreader rem number of 0.

• The printer used to generate GAZETTE program listings still places an occasional random question mark. Line 1018 of "Disk File Manager" (December 1983) contains one such superfluous character. To correct this, delete the question mark after FILE=. The program runs as listed, but the Proofreader checksum number will not be correct if the question mark is included.

• "Thinking" (December 1983) contains a minor typographical error. If the REM is removed from line 2 to convert Thinking to Thinking Harder, there are nine switches instead of six. But the prompt in line 132 says there are six. To correct this, change YOUR NUMBER (1–6) to YOUR NUMBER (1–"G$").

• "Foolproof INPUT" ("PowerBASIC," December 1983) as published does not solve the problems caused by commas and colons. It disables the cursor keys and certain other function keys, but commas will still cause an ?EXTRA IGNORED error. The solution is to POKE 198,1: POKE 631,34 before each INPUT. In a program with many INPUT statements, these two POKEs could be put into a subroutine. After the POKEs, the computer will be in quote mode, which allows entry of commas and colons.

• Readers who bowled a perfect game (300) in "Bowling Champ" (December 1983) may have been disappointed to find 290 as their score. Our thanks to reader David McDonnell, Jr., for finding this bug. To correct it, change these lines:

```
209 J=0:GOSUB430:GOSUB550:T(Z9)=T(Z9)+J
                                    :rem 83
210 K=J+176:IFK=186THENK=152:T(Z9)=T(Z9)-
    J*(U=0)                         :rem 8
211 PRINTC$(Z9);T(Z9):POKEL(Z9),K:POKEL(Z
    9)+CO,4:L(Z9)=L(Z9)+1           :rem 216
```

• "Spelling Bee For VIC" (December 1983) contains a minor error. Line 360 includes a PRINT color which is accessible on the Commodore 64, but not on the VIC. To remedy this, change Commodore-5 to CTRL-5 (purple).

• Readers Wesley Evans and Dick Sloss both discovered an error in the program "Sprite BASIC" from "Sprites Made Easy" (December 1983). The problem occurs in the colors of sprites 1–7. To correct this, make the following changes:

```
170 FOR I=49152 TO 49384:READN:POKE I,N:A
    =A+N:NEXT I                     :rem 189
180 IF A<>30780 THEN PRINT "ERROR IN DATA
     STATEMENTS"                    :rem 40
280 DATA 138,164,2,145,251,32,253,174,32,
    227,192,224,16,176,146,138,153
                                    :rem 179
300 DATA 23,208,32,253,174,32,227,192,224
    ,4,176,223,134,2,70,2,144       :rem 160
340 DATA 32,158,183,164,2,96        :rem 104
```

In addition, some readers have run into problems with the "Tie Fighter" program in the same article. The program runs as listed, but only if "Sprite BASIC" is loaded and run first.

COMMODORE 64

Finally, Excellent Software At An Affordable Price!

Compare:
- MENU DRIVE
- USER LOVABLE
- ADVANCED FEATURES

DATA BASE/MAIL LIST

Fast random access to any record. Search on any field. Machine Language sorts. Prints mailing labels. Large records. Eight fields.

LOAN ANALYSIS SYSTEM

Calculate a loan's term, interest rate, principal or monthly payment. Display an amortization schedule on screen or printer. Yearend totals for payment to interest and payment to principal. Printer version also gives principal and interest paid to date for the life of the loan.

HOME INVENTORY

Record all your valuables. Print inventory lists on screen or printer. Record 700 items per disk. Search items by Category, Manufacturer or Item Description. Indispensable in case of theft or fire.

WE PAY TAX AND POSTAGE!

80 COLUMNS! 25 LINES

A FULL PROFESSIONAL DISPLAY FOR

Commodore 64 with Screenmaker™

Screenmaker is a video display generator module that plugs into the expansion connector of the Commodore 64.

- ✓ WORD PROCESSING
- ✓ CALCULATIONS
- ✓ BASIC PROGRAMS

Screenmaker provides a B & W video signal that connects to your video monitor to provide a full 80 characters on each line. With Screenmaker, Screen displays will appear the same as the printer output. Trial printouts can be eliminated. Word processing is easier. Forms and reports can be set up faster. Screenmaker features a bank switched memory, 40/80 video switch, and a full character set including graphics.

SCREENMAKER $159.95

Copy-Writer Word Processor... $ 79.95

DISAPPOINTED

in the scarcity of truly useful home application programs? Finally, a program that you will want to USE every week to save you time and money without constant updating.

SHOPPING MANAGER
a System for Grocery Shopping

The System includes two programs and a supermarket datafile. 1. SHOPPING MANAGER, is used on a regular basis. It displays the contents of YOUR supermarket to you, an aisle at a time, for your selection. Use the function keys to easily note coupon or sale items or add personal comments to your list. The final printout is a shopping list, arranged aisle by aisle, starting at the store entrance and finishing at the checkout line. It will cut your time in the store in half, eliminate impulse buying and return trips for forgotten items. No more coupon searches in the middle of an aisle. 2. MARKET MAPPER (2 program in VIC-20), is a super editing package that painlessly turns the SAMPLE market file into an accurate map of YOUR supermarket. Display nine editing options, including printer dump of the file; make a new store, edit existing, rearrange and merge aisles, and copy files between disk and tape in any order. (We hate updating databases).
3. SAMPLE, the supermarket database, contains many aisles and over 1100 items. The SAMPLE aisles are building blocks that you can merge and rearrange to build a model of your own favorite store. (It can also be used without modification).

REQUIRES: C-64 or VIC-20 (w/16K expansion); TV or Monitor; Tape Datassette or Disk Drive; and Printer.

US $29.95 + $1.50 shipping (Canada & UK at Conv. Rate + $3.00 shipping) (TV users can add $7.50 for C64 hires color jack – OPTIONAL)

SAIL TO AMERICA

A totally new computer experience

- **Parents** Tell your kids Cadmean's *The Voyage of the Mayflower* has all the color, sound and excitement they love. Challenge the mighty Atlantic, defy its roaring storms and bring your passengers safely to the new world. There's never been an experience like it. Anywhere.
- **Kids** Tell your parents *The Voyage of the Mayflower* is a terrific learning adventure. Recreate the hazards and drama of the first Pilgrim voyage. Learn about sailing strategy, weather, navigation and history. The more you know the more fun it is. Every level is a unique experience whether you're 6 or 60. Unforgettable.
- **Families** Pit your imagination against the world as the Pilgrims knew it. Share the exciting journey to a new life in a new land. Risk the danger and learn together how the Mayflower sailed into history on the courage of those few who dared.

All this and a **FREE** 11 x 16 Poster for only $29.

CONVERSE WITH YOUR COMPUTER

AT LAST! A FULL IMPLEMENTATION of the original ELIZA program is now available to run on your Commodore 64!

Created at MIT in 1966, ELIZA has become the world's most celebrated artificial intelligence demonstration program. ELIZA is a non-directive psychotherapist who analyzes each statement as you type it in and then responds with her own comment or question – and her remarks are often amazingly appropriate!

Designed to run on a large mainframe, ELIZA has never before been available to personal computer users except in greatly stripped down versions lacking the sophistication which made the original program so fascinating.

Now, our new Commodore 64 version possessing the **FULL** power and range of expression of the original is being offered at the introductory price of only $25. And if you want to find out how she does it (or teach her to do more) we will include the complete **SOURCE PROGRAM** for only $20 additional.

Order your copy of ELIZA today and you'll never again wonder how to respond when you hear someone say, "Okay, let's see what this computer of yours can actually do!"

ELIZA IS AVAILABLE IN THE FOLLOWING FORMATS:
(Please specify Disk or Cassette)

1. Protected Version $25
(Protected Version can be run but not listed or modified)
2. Un-protected Commodore 64 BASIC Source Version $45
(Source Version can be listed and modified as well as run)
Both versions include a six page user manual.

Please add $2.00 shipping and handling to all orders
(California residents please add 6% sales tax)

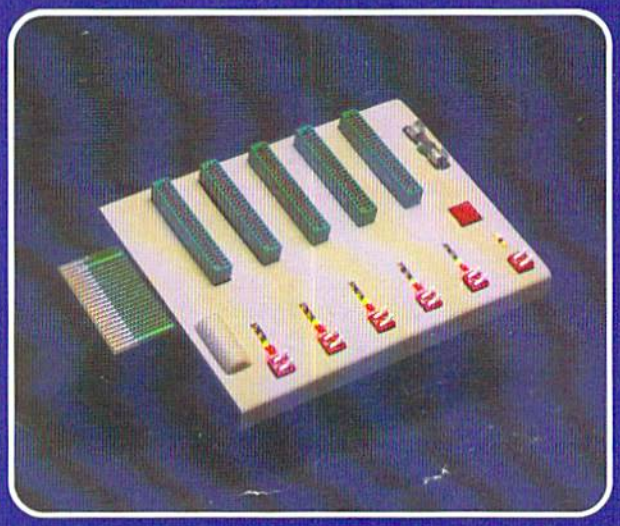
Five Slot Expansion Interface for the C-64™

The CARDBOARD/5 (CB/5) is an enclosed five slot, fully switch selectable, expansion interface for the Commodore 64™. This quality product allows the user to switch select any cartridge slot or combination of cartridge slots. Twenty-two color coded light emitting diodes give status indication. Each slot has four LEDs and two toggle switches for indication and control. Two master toggle switches allow the user to manually override any situation.

All Cardco products are individually tested to insure quality and reliability.



Some of the features of the CARDBOARD/5 are:

- high quality glass/epoxy circuit board
- gold plated contacts
- logic lines are switched by solid state IC switches
- full LED status indication
- convenient toggle switches
- full support under the board to prevent flexing
- full plastic enclosure to insure safety
- fused to protect your computer
- convenient reset button
- CARDCO, Inc.'s exclusive Lifetime Guarantee

Manufacturer's Suggested Price: $79.95

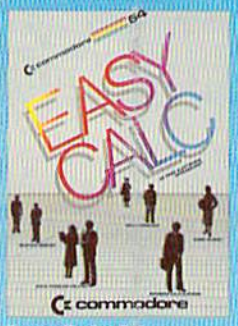
INDISPENSABLE SOFTWARE

For Your Most Important Computing Needs

EasyScript 64
Displays 764 lines × 240 characters. Prints to 130 columns. Works with EasySpell 64.

EasySpell 64
20,000 word Master Dictionary and automatic spelling checker. Works with EasyScript 64.



EasyCalc 64
Multiple electronic spreadsheet with color bar graph feature. 63 columns × 254 rows.

The Manager
Sophisticated database system with 4 built-in applications, or design your own. Text, formulas, graphics.

SuperExpander 64
21 special commands. Combine text with high resolution graphics. Music and game sounds.

Easy Finance I—Loan Analysis
12 loan functions. Bar graph forecasting as well as calculation.

Easy Finance II—Basic Investment Analysis
16 stock investment functions. Investment bar graph.

Easy Finance III—Advanced Investment Analysis
16 capital investment functions. Bar graphs.

Easy Finance IV—Business Management
21 business management features. Bar graphs.

Easy Finance V—Statistics and Forecasting
Assess present/future sales trends with 9 statistics and forecasting functions.

Accounts Payable/ Checkwriting
11 functions. Automatic billing. 50 vendors/disk.

Accounts Receivable/Billing
11 billing functions. Printed statements.

General Ledger
8 general ledger options. Custom income statement, trial balances, reports.

Inventory Management
1000 inventory items. Full reports.

Payroll
24 different payroll functions. Integrated with G/L system.
